Flowers In The Attic V.C. Andrews, 2011-02-08 Celebrate the fortieth anniversary of the enduring gothic masterpiece *Flowers in the Attic*—the unforgettable forbidden love story that earned V.C. Andrews a fiercely devoted fan base and became an international cult classic. At the top of the stairs there are four secrets hidden—blond, innocent, and fighting for their lives... They were a perfect and beautiful family—until a heartbreaking tragedy shattered their happiness. Now, for the sake of an inheritance that will ensure their future, the children must be hidden away out of sight, as if they never existed. They are kept in the attic of their grandmother's labyrinthine mansion, isolated and alone. As the visits from their seemingly unconcerned mother slowly dwindle, the four children grow ever closer and depend upon one another to survive both this cramped world and their cruel grandmother. A suspenseful and thrilling tale of family, greed, murder, and forbidden love, *Flowers in the Attic* is the unputdownable first novel of the epic Dollanganger family saga. The Dollanganger series includes: *Flowers in the Attic*, *Petals in the Wind*, *If There Be Thorns*, *Seeds of Yesterday*, *Garden of Shadows*, *Beneath the Attic*, and *Out of the Attic*.

The New Lombard Street Perry Mehrling, 2022-11-29 Walter Bagehot's Lombard Street, published in 1873 in the wake of a devastating London bank collapse, explained in clear and straightforward terms why central banks must serve as the lender of last resort to ensure liquidity in a faltering credit system. Bagehot's book set down the principles that helped define the role of modern central banks, particularly in times of crisis—but the recent global financial meltdown has posed unforeseen challenges. The New Lombard Street lays out the innovative principles needed to address the instability of today's markets and to rebuild our financial system. Revealing how we arrived at the current crisis, Perry Mehrling traces the evolution of ideas and institutions in the American banking system since the establishment of the Federal Reserve in 1913. He explains how the Fed took classic central banking wisdom from Britain and Europe and adapted it to America's unique and considerably more volatile financial conditions. Mehrling demonstrates how the Fed increasingly found itself serving as the dealer of last resort to ensure the liquidity of securities markets—most dramatically amid the recent

financial crisis. Now, as fallout from the crisis forces the Fed to adapt in unprecedented ways, new principles are needed to guide it. In *The New Lombard Street*, Mehrling persuasively argues for a return to the classic central bankers' money view, which looks to the money market to assess risk and restore faith in our financial system.

Art in the Age of Machine Learning Sofian Audry, 2021-11-23 An examination of machine learning art and its practice in new media art and music. Over the past decade, an artistic movement has emerged that draws on machine learning as both inspiration and medium. In this book, transdisciplinary artist-researcher Sofian Audry examines artistic practices at the intersection of machine learning and new media art, providing conceptual tools and historical perspectives for new media artists, musicians, composers, writers, curators, and theorists. Audry looks at works from a broad range of practices, including new media installation, robotic art, visual art, electronic music and sound, and electronic literature, connecting machine learning art to such earlier artistic practices as cybernetics art, artificial life art, and evolutionary art. Machine learning underlies computational systems that are biologically inspired, statistically driven, agent-based networked entities that program themselves. Audry explains the fundamental design of machine learning algorithmic structures in terms accessible to the nonspecialist while framing these technologies within larger historical and conceptual spaces. Audry debunks myths about machine learning art, including the ideas

that machine learning can create art without artists and that machine learning will soon bring about superhuman intelligence and creativity. Audry considers learning procedures, describing how artists hijack the training process by playing with evaluative functions; discusses trainable machines and models, explaining how different types of machine learning systems enable different kinds of artistic practices; and reviews the role of data in machine learning art, showing how artists use data as a raw material to steer learning systems and arguing that machine learning allows for novel forms of algorithmic remixes.

Autism in Adolescents and Adults Eric Schopler, Gary B. Mesibov, 1983-02-28 The state of North Carolina has had a longstanding concern and commitment to

the understanding and treatment of autistic, communications handicapped children and their families. This commitment found expression in the only comprehensive statewide program for families confronted with this disability, Division for the Treatment and Education of Autistic and related Communication handicapped CHildren (Division TEACCH). Our program staff has been privileged to respond to this commitment by developing and providing the needed services, and to engage in research informed by our clinical experience. Although many of the problems concerning these developmentally disabled children remain to be solved, substantial progress has been made during this past decade of collaboration among professionals, parents, and their government representatives. The TEACCH staff has resolved to mark the effectiveness of this collaboration by holding a series of annual conferences focused on the several major issues confronting these children and their families. The conferences are held in order to bring together the best research knowledge available to us from throughout the country, and to encourage participation by the different professional disciplines and concerned parents. In addition these annual meetings form the basis for a series of books based on the conference theme. These books are, however, not merely the published proceedings of the presented papers: some chapters are expanded from conference presentations and many others were solicited from experts in the related areas of research and their service application.

A Constitutive Model for Unsaturated Soils Daichao Sheng, S. W. Sloan, A. Gens, 2003 This paper first presents a complete electoplastic constitutive model for unsaturated soils that incorporates recent developments in the field into the Barcelona Basic Model. The model is then studied in the framework of thermochemical principles. The incremental constitutive equations are reformulated for implementation in finite element codes where displacements and pore pressures are primary unknowns. At last, qualitative predictions of the model are compared with observed behaviour of unsaturated soils. --p. 2.
