Conspicuous Silences Ruth Rosaler,2016-11-10 How are a reader's perceptions of a plot impacted by its presentation through textual clues rather than explicit narration, and why would an author choose this comparatively indirect mode of narration? Conspicuous Silences answers these questions by examining Victorian novels in which pivotal events are left inexplicit for hundreds of pages at a time, but are nonetheless evident to the reader. The clarity with which readers understand these inexplicit plot lines is evidenced by their ability to follow the progression of narratives that rely heavily on the inexplicit content being detected; without this reader comprehension, these narratives would be deemed incoherent. In linguistics, communications that depend on a hearer's or reader's inference, rather on their 'decoding' the explicit content of an utterance, are termed 'implicatures'. Conspicuous Silences explores the impact that central, sustained implicatures have on a reader's experience of a novel. It also discusses how authors may generate those implicatures by exploiting the reader's assumption of narratorial omniscience, and the correlated reader assumption of a narrative's fictionality. Reliance on such sustained, fictionality-related implicatures is fairly ubiquitous: Conspicuous Silences concentrates on texts by Elizabeth Gaskell, George Eliot, Charles Dickens, Frances Trollope, Anthony Trollope, Wilkie Collins, and M. E. Braddon. It examines the use of implicature in communicating impolite topics, communicating character psychology, and in fashioning a playful narrative tone. This work contributes to Victorian literary scholarship, narratological discussions about narratorial omniscience and fictionality, and pragmatic stylistic debates about fictionality and the use of implicature.

Reading the Book of Nature Jonathan R. Topham,2022-10-12 When Darwin returned to Britain from the Beagle voyage in 1836, the most talked-about scientific books were the Bridgewater Treatises. This series of eight books was funded by a bequest of the last Earl of Bridgewater, and they were authored by leading men of science, appointed by the President of the Royal Society, and intended to explore the power, wisdom, and goodness of God, as manifested in the creation. Securing public attention beyond all expectations, the series gave Darwin's generation a range of approaches to one of the great questions of the age: how to incorporate the newly emerging disciplinary sciences into Britain's overwhelmingly Christian culture. Drawing on a wealth of archival and published sources, including many unexplored by historians, Jonathan R. Topham examines how and to what extent the series contributed to a sense of congruence between Christianity and the sciences in the generation before the infamous Victorian conflict between science and religion. He does so by drawing on the distinctive insights of book history, using close attention to the production, circulation, and use of the books to open up new perspectives not only on aspects of early Victorian science but also on the whole subject of science and religion. Its innovative focus on practices of authorship, publishing, and reading helps us to understand the everyday considerations and activities through which the religious culture of early Victorian science was fashioned. And in doing so, *Reading the Book of Nature* powerfully reimagines the world in which a young Charles Darwin learned how to think about the implications of his theory--

One Hundred Patents That Shaped the Modern World David Segal,2019-02-07 What would our world today be like without inventions like tarmac, aspirin, liquid crystals, and barbed wire? This guide shows how patents and the inventions they describe have shaped the 21st century. It gives us insights into the inventions, big and small, that have had huge impacts, many unexpected, on multiple spheres of our lives, from popular culture and entertainment, to global health, to transportation, to the waging of war. It features patent documents that date from the mid-19th century to the present. Patent documents describe inventions and represent an accurate and rich source of information about the history and current state of modern technology, as patents are examined and their accuracy can be challenged. The subject matter covers many technical areas. Patents discussed include, for example, Morse code, the diode, triode, transistors, television, frozen foods, ring-pull for soft drink cans, board games such as Monopoly, gene editing, metamaterials, MRI, computerised tomography, insulin, and monoclonal antibodies such as Herceptin. The text is illustrated with drawings adapted from the original patent documents. Patent numbers are included to allow interested readers to trace the documents. Inventions described in the patents are placed in historical perspective. For example, the book discusses the role of the cavity magnetron and radar in World War II, and the influence of the diode on the development of broadcasting at the beginning of the 20th century.

Point of View in Plays Dan McIntyre,2006-09-12 This is the first book-length study of how point of view is manifested linguistically in dramatic texts. It examines such issues as how readers process the shifts in viewpoint that can occur within such texts. Using insights from cognitive linguistics, the book aims to explain how the analysis of point of view in drama can be undertaken, and how this is fruitful for understanding textual and discoursal effects in this genre. Following on from a consideration of existing frameworks for the analysis of point of view, a cognitive approach to deixis is suggested as being particularly profitable for explaining the viewpoint effects that can arise in dramatic texts. To expand on the large number of examples discussed throughout the book, the penultimate chapter consists of an extended analysis of a single play. This book is relevant to scholars in a range of areas, including linguistics, literary studies and cognitive science.

Mobile and Ubiquitous Systems: Computing, Networking, and Services Ivan Stojmenovic,Zixue Cheng,Song Guo,2014-09-27 This book constitutes the thoroughly refereed post-conference proceedings of the 10th International ICST Conference on Mobile and Ubiquitous Systems: Computing, Networking, and Services, MobiQuitous 2013, held in Tokyo, Japan, in December 2013. The 67 revised full papers presented were carefully reviewed and selected from 141 submissions. The papers and 2 invited talks cover a wide range of topics such as mobile applications, social networks, networking, data management and services.

Electronic Structure Richard M. Martin,2020-08-27 The study of electronic structure of materials is at a momentous stage, with new computational methods and advances in basic theory. Many properties of materials can be determined from the fundamental equations, and electronic structure theory is now an integral part of research in physics, chemistry, materials science and other fields. This book provides a unified exposition of the theory and methods, with emphasis on understanding each essential component. New in the second edition are recent advances in density functional theory, an introduction to Berry phases and topological insulators explained in terms of elementary band theory, and many new examples of applications. Graduate students and research scientists will find careful explanations with references to original papers, pertinent reviews, and accessible books. Each chapter includes a short list of the most relevant works and exercises that reveal salient points and challenge the reader.

On the History and Transmission of Lacanian Psychoanalysis Chris Vanderwees,2023-10-20 On the History and Transmission of Lacanian Psychoanalysis addresses key questions about the history and transmission of Jacques Lacan’s work in North America through discussions with experienced psychoanalysts (who are also trained psychiatrists, psychologists, and psychotherapists). Chris Vanderwees presents conversations with clinicians about their psychoanalytic formation and about the development of Lacanian psychoanalysis in North America over the past several decades. With oral narrative brought out through the technique of free association, then transcribed and annotated, each discussion is a trace of Vanderwees’ encounter with each clinician and the result of collaborative efforts involving speech, writing, translation, and transmission. The conversational tone makes these discussions accessible not only for those already well-versed in Lacan’s thinking, but also for anyone discovering his work for the first time. The range of contributions spans both French and English-speaking Canada, the United States, and Mexico. Complemented by On the Theory and Clinic of Lacanian Psychoanalysis, this book of conversations conveys the diversity of historical and pedagogical perspectives on theory and practice as inspired by Lacan’s system of thought. It will be of great interest to all psychoanalytic practitioners as well as academics and scholars of psychoanalysis.

Taurine 11 Jianmin Hu,Fengyuan Piao,Stephen W. Schaffer,Abdeslem El Idrissi,Jang-Yen Wu,2019-08-29 This book gathers a selection of original articles and critical reviews presented at the 21st International Taurine Meeting, held in Shenyang, China in May 2018, which discussed and disseminated the latest findings on taurine, especially in human life. The book is divided into eight parts, which respectively address: Taurine and Metabolism, Taurine and Nutrition, Taurine and Organ Dysfunction, Taurine and Heart Health, Taurine and Anti-cancer, Taurine and Anti-oxidation / Anti-microbial, Taurine and Neuroprotection, and Taurine and Anti-inflammatory. These latest discoveries concerning the functions and advantageous effects of taurine on the health of various human body systems will not only advance the treatment of human diseases and the quality of human life, but also promote further research into the applications of taurine in human health.

Proof and Knowledge in Mathematics Michael Detlefsen,2005-08-18 These questions arise from any attempt to discover an epistemology for mathematics. This collection of essays considers various questions concerning the nature of justification in mathematics and possible sources of that justification. Among these are the question of whether mathematical justification is a priori or a posteriori in character, whether logical and mathematical differ, and if formalization plays a significant role in mathematical justification,

Salmonella France Daigle,2021-06-24 This Special Issue “Applications of Stable Isotopes and Tritium in Hydrology” addresses the current state-of-the-art applications of stable isotopes and tritium in studies of hydrological process and the whole water cycle. The six scientific papers belonging to this SI show a wide variety of isotope applications in various studies performed locally or regionally, but the conclusions obtained may be valid worldwide. Precipitation, groundwater, and surface waters belong to classical water bodies, while evapotranspiration, effects of farming, and drip water in karst caves seldom present applications of water isotopes.

Exploited, Empowered, Ephemeral Denise Burkhard,2023-07-10 Childhood in neo-Victorian fiction for both child and adult readers is an extremely multifaceted and fascinating field. This book argues that neo-Victorian fiction projects multiple, competing visions of childhood and suggests that they can be analysed by means of a typology, the 'childhood scale', which provides different categories along the lines of power relations, and literary possible-worlds theory. The usefulness of both is exemplified by detailed discussions of Philippa Pearce's Tom's Midnight Garden (1958), Eva Ibbotson's Journey to the River Sea (2001), Sarah Waters' Fingersmith (2002) and Dianne Setterfield's The Thirteenth Tale (2006).

John and Thomas--Gospels in Conflict? Christopher W. Skinner,2009-06-01 The hypothesis that the Fourth Gospel is a theological response to the Gospel of Thomas is a recent development in the study of the New Testament and early Christianity. Assuming an early date for the Gospel of Thomas, the proponents of this hypothesis argue that the supposed polemical presentation of Thomas in the Fourth Gospel is evidence of a conflict between the early communities associated respectively with John and Thomas. However, a detailed narrative study reveals that the Fourth Gospel portrays a host of characters--disciples and non-disciples--in an equally unflattering light where an understanding of Jesus's origins, message, and mission are concerned. The present study attempts to demonstrate that the Fourth Gospel's presentation of Thomas is part and parcel of its treatment of uncomprehending characters. If this thesis is correct, it poses a significant challenge to the assumption that the Fourth Gospel contains a polemic against Thomas, or that it was written in response to the Gospel of Thomas or the community associated with Thomas.
