*The Use of Dispersants in Marine Oil Spill Response* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Ocean Studies Board, Committee on the Evaluation of the Use of Chemical Dispersants in Oil Spill Response, 2020-04-24 Whether the result of an oil well blowout, vessel collision or grounding, leaking pipeline, or other incident at sea, each marine oil spill will present unique circumstances and challenges. The oil type and properties, location, time of year, duration of spill, water depth, environmental conditions, affected biomes, potential human community impact, and available resources may vary significantly. Also, each spill may be governed by policy guidelines, such as those set forth in the National Response Plan, Regional Response Plans, or Area Contingency Plans. To respond effectively to the specific conditions presented during an oil spill, spill responders have used a variety of response options—including mechanical recovery of oil using skimmers and booms, in situ burning of oil, monitored natural attenuation of oil, and dispersion of oil by chemical dispersants. Because each response method has advantages and disadvantages, it is important to understand specific scenarios where a net benefit may be achieved by using a particular tool or combination of tools. This report builds on two previous National Research Council reports on dispersant use to provide a current understanding of the state of science and to inform future marine oil spill response operations. The response to the 2010 Deepwater Horizon spill included an unprecedented use of dispersants via both surface application and subsea injection. The magnitude of the spill stimulated interest and funding for research on oil spill response, and dispersant use in particular. This study assesses the effects and efficacy of dispersants as an oil spill response tool and evaluates trade-offs associated with dispersant use.

**From the Manpower Revolution to the Activation Paradigm** J. Timo Weishaupt, 2011 This illuminating book examines the origins and evolution of labor market policy in Western Europe in three phases: a manpower revolution during the 1960s and 1970s; a phase of international disagreement about the causes of and remedies for unemployment, which triggered a variety of policy responses in the late 1970s and 1980s; and, finally, the emergence of an activation paradigm in the late 1990s, the influence of which continues to reverberate today. J. Timo Weishaupt contends that the evolution of labor market policy is determined not only by historical trajectories or coalitional struggles, but also by policy makers' changing normative and cognitive beliefs. Including case studies of Austria, Denmark, Germany, Ireland, Sweden, and the United Kingdom, this study will be of value to anyone interested in labor market policy and its governance.

**Geospatial Technologies and Homeland Security** Daniel Sui, 2008-05-25 Homeland security and context In the Geographical Dimensions of Terrorism (GDOT) (Cutter et al. 2003), the first book after 9/11 to address homeland security and geography, we developed several thematic research agendas and explored intersections between geographic research and the importance of context, both geographical and political, in relationship to the concepts of terrorism and security. It is good to see that a great deal of new thought and research continues to flow from that initial research agenda, as illustrated by many of the papers of this new book, entitled Geospatial Technologies and Homeland Security: Research Frontiers and Future Challenges. Context is relevant not only to understanding homeland security issues broadly, but also to the conduct of research on geospatial technologies. It is impossible to understand the implications of a homeland security strategy, let alone hope to make predictions, conduct meaningful modeling and research, or assess the value and dangers of geospatial technologies, without consideration of overarching political, social, economic, and geographic contexts within which these questions are posed.

*A Commentary on Apollonius Rhodius Argonautica III, 1-471* Malcolm Campbell, 2018-07-17 This is a commentary on the third book of Apollonius' Argonautica, one of the most influential and admired products of the Hellenistic era. The author sets out to deal comprehensively with all important aspects of the work; in particular, proper attention is paid for the first time to the poet's constant manipulation of the two Homeric epics; many thorny problems of text and interpretation are examined afresh; and a wealth of hitherto unadduced illustrative material drawn from Greek and Roman poetry of various genres and periods is used to shed light on a number of issues. The volume closes with a series of detailed digestive indexes dealing with diction, models and imitations, language and style, metre, transmission, mythology, religion, geography, ethnography and aetiology.

**Descendants of Waverley** Martha F. Bowden, 2016-08-11 Descendants of Waverley examines contemporary novelists' combination of historical authority and narrative art to create authentic and accessible depictions of the past. This technique, the "romance of history," challenges conventional theories that the novel as a genre erased the romance. Individual chapters establish the critical framework, analyze the strategies that authors use to romance history, and demonstrate the subgenres that exist in current historical fiction. While the author does not consider Walter Scott to be the inventor of historical fiction, she demonstrates the ways in which contemporary fiction's techniques reflect the form of the genre that Scott both developed and theorized in the Waverley novels (1814–1832). In writing his "historical romances," Scott drew on the forms of the fictions that preceded his work, especially Gothic fiction, and was influenced by the fluid definitions of "romance" that permeated the theorizing of the novel and its development in the eighteenth century, where fiction was described as evolving from and replacing romances and referred to as "romances" themselves. She begins by tracing this history and moves on to discuss contemporary fiction, both as technique, in the uses of intertextuality, and in as form, in the increasing hybridity of contemporary fiction. This hybridity is reflected in such forms as the historical detective novel, the embedded narrative, and the biographical novel; the pedagogical elements inherent in the historical novel before Scott's oeuvre continue into the present. The book ends with the recent phenomenon of historical fantasy; in this subgenre, the traits of more conventional historical fiction, such as intertextuality and the tension between the familiar and strange, combine with a playful form of fantasy that releases revenants among the Luddites and wizards into the Battle of Waterloo. John Frow's theory of the slipperiness of genre is a critical component for explicating the most recent metamorphoses of historical fiction. The critical framework also develops from recent and eighteenth-century histories of the novel, twentieth- and twenty-first-century theories of Scott's influence, and contemporary writers' own reflections on what they do when they write historical novels.

*Internet, Economic Growth and Globalization* Claude E. Barfield, Günter S. Heiduk, Paul J.J. Welfens, 2012-11-02 The dynamics of the digital economy in the US, Europe and Japan are rather different. Some EU countries come close to the USA as the leading OECD country in the new economy, but Japan faces particular problems in catching-up digitally. Information and communication technology will affect productivity growth, production, the financial system and trade. Setting adequate rules for the digital economy - at the national and international level - is a key challenge for industrialized countries. Moreover, cultural and organizational challenges will also have to be met.

**The New Urban Sociology** Michael T. Ryan, Ray Hutchison, Mark Gottdiener, 2018-05-04 Widely recognized as a groundbreaking text, *The New Urban Sociology* is a broad and expert introduction to urban sociology that is both relevant and accessible to the student. A thought leader in the field, the book is organized around an integrated paradigm (the sociospatial perspective) which considers the role played by social factors such as race, class, gender, lifestyle, economics, culture, and politics on the development of metropolitan areas. Emphasizing the importance of space to social life and real estate to urban development, the book integrates social, ecological and political economy perspectives and research through a fresh theoretical approach. With its unique perspective, concise history of urban life, clear summary of urban social theory, and attention to the impact of culture on urban development, this book gives students a cohesive conceptual framework for understanding cities and urban life. In this thoroughly revised 5th edition, authors Mark Gottdiener, Ray Hutchison, and Michael T. Ryan offer expanded discussions of created cultures, gentrification, and urban tourism, and have incorporated the most recent work in the field throughout the text. *The New Urban Sociology* is a necessity for all courses on the subject.

**The Radiological Consequences of the Chernobyl Accident** Commission of the European Communities, 1996 Five main objectives were assigned to the EC/CIS scientific collaborative programme: improvement of the knowledge of the relationship between doses and radiation-induced health effects; updating of the arrangements for off-site emergency management response (short- and medium term) in the event of a future nuclear accident; assisting the relevant CIS Ministries alleviate the consequences of the Chernobyl accident, in particular in the field of restoration of contaminated territories; elaboration of a scientific basis to define the content of Community assistance programmes; updating of the local technical infrastructure, and implementation of a large programme of exchange of scientists between both Communities. The topics addressed during the Conference mainly reflect the content of the joint collaborative programme: environmental transfer and decontamination, risk assessment and management, health related issues including dosimetry. The main aims of the Conference are to present the major achievements of the joint EC/CIS collaborative research programme (1992-1995) of the consequences of the Chernobyl accident, and to promote an objective evaluation of them by the international scientific community. The Conference is taking place close to the 10th anniversary of the accident and we hope it will contribute to more objective communication of the health and environmental consequences of the Chernobyl accident, and how these may be mitigated in future. The Conference is expected to be an important milestone in the series of meetings which will take place internationally around the 10th anniversary of the nuclear accident. It also provides a major opportunity for all participants to become acquainted with software developed within the framework of the collaborative programme, namely: Geographical Information Systems displaying contamination levels and dose-commitments; Decision Support Systems for the management of contaminated territories; Decision Support Systems for off-site emergency management (RODOS), etc.

**Secondary Metabolites of Plant Growth Promoting Rhizomicroorganisms** Harikesh Bahadur Singh, Chetan Keswani, M. S. Reddy, Estibaliz Sansinenea, Carlos García-Estrada, 2019-04-15 Recent changes in the pattern of agricultural practices from use of hazardous pesticides to natural (organic) cultivation has brought into focus the use of agriculturally important microorganisms for carrying out analogous functions. The reputation of plant growth promoting rhizomicroorganisms (PGPRs) is due to their antagonistic mechanisms against most of the fungal and bacterial phytopathogens. The biocontrol potential of agriculturally important microorganisms is mostly attributed to their bioactive secondary metabolites. However, low shelf life of many potential agriculturally important microorganisms impairs their use in agriculture and adoption by farmers. The focal theme of this book is to highlight the potential of employing biosynthesized secondary metabolites (SMs) from agriculturally important microorganisms for management of notorious phytopathogens, as a substitute of the currently available whole organism formulations and also as alternatives to hazardous synthetic pesticides. Accordingly, we have incorporated a comprehensive rundown of sections which particularly examine the SMs synthesized, secreted and induced by various agriculturally important microorganisms and their applications in agriculture. Section 1 includes discussion on biosynthesized antimicrobial secondary metabolites from fungal biocontrol agents. This section will cover the various issues such as development of formulation of secondary metabolites, genomic basis of metabolic diversity, metabolomic profiling of fungal biocontrol agents, novel classes of antimicrobial peptides. The section 1 will also cover the role of these secondary metabolites in antagonist-host interaction and application of biosynthesized antimicrobial secondary metabolites for management of plant diseases. Section 2 will discuss the biosynthesized secondary metabolites from bacterial PGPRs, strain dependent effects on plant metabolome profile, bio-prospecting various isolates of bacterial PGPRs for potential secondary metabolites and non-target effects of PGPR on microbial community structure and functions. Section 3 encompasses synthesis of antimicrobial secondary metabolites from beneficial endophytes, bio-prospecting medicinal and aromatic hosts and effect of endophytic SMs on plants under biotic and biotic stress conditions.
