Test Results of a High-speed Capping Shutter for Large-aperture Geodetic Cameras M. S. Tavenner,1966 Experiments were made with passive satellites for obtaining geodetic information using methods of stellar triangulation. Camera shutters for large-aperture cameras have presented a severe problem in timing. Using a contractor-developed capping shutter, a series of field tests was conducted with the Air Force's PC-1000 Geodetic Stellar Camera System for observations of the Echo I satellite. The report is concerned with the results of this test series and an evaluation of the capping shutter as adapted to the PC-1000 camera system. (Author).

Triaxial Automatic Photo-camera for Observing Man-made Earth Satellites M. K. ABELE,FOREIGN TECHNOLOGY DIV WRIGHT-PATTERSON AFB OHIO.,1965 A compensation method is used for satellite tracking with a photographic camera (f=75 cm., D/f=1:3.5, field of view 4 degrees x 5 degrees). A frame with the film placed in the focal plane of the objective lens vibrates in the direction of the track with the velocity of the image of the satellite. The vibrational motions of the frame as well as the rotation of the camera, the guiding and operating of the shutter are performed by means of an electronicprogramming device according to an approximate formula $\omega = \omega_0 \sin \epsilon$. If the rotational velocity of the camera is not the same as that of the satellite a correction by hand can be made. Photographs of bright objects are taken on a fixed film with a rotating obturator. The time of observation is marked by means of a quartz clock. It is possible to track moving objects down to 10m, the internal error of position determination being = (0 min, 5 + 1 min). (Author).

Remote Sensing of Landscapes with Spectral Images John B. Adams,Alan R. Gillespie,2006-05-11 Remote Sensing of Landscapes with Spectral Images describes how to process and interpret spectral images using physical models to bridge the gap between the engineering and theoretical sides of remote-sensing and the world that we encounter when we venture outdoors. The emphasis is on the practical use of images rather than on theory and mathematical derivations. Examples are drawn from a variety of landscapes and interpretations are tested against the reality seen on the ground. The reader is led through analysis of real images (using figures and explanations); the examples are chosen to illustrate important aspects of the analytic framework. This textbook will form a valuable reference for graduate students and professionals in a variety of disciplines including ecology, forestry, geology, geography, urban planning, archaeology and civil engineering. It is supplemented by a website hosting digital colour versions of figures in the book as well as ancillary images: www.cambridge.org/9780521662214.
