Shooter's Bible Guide to Bowhunting Todd A.

Kuhn,2013-08-01 From the most trusted name in guns and ammunition comes this ultimate reference on bowhunting. *The Shooter's Bible Guide to Bowhunting* offers everything you need to know about the sport and its gear, from its origin as a means of survival to modern gear. Compound bows and crossbows have undergone an explosive rise in popularity in recent years, due in part, Dr. Todd A. Kuhn explains, to complex socioeconomic,

environmental, and biological factors. As expansive tracts of land vanish, many hunters can no longer pursue game with high-powered rifles. That, plus vast improvements in archery gear, has hunters flocking to compound bows and crossbows as alternatives. In the Shooter's Bible Guide to Bowhunting Dr. Kuhn examines all things bowhunting and archery. Topics covered include: Compound, recurve, and traditional bows Arrows and broadheads Sights and rests Releases and triggers Quivers Tree stands, blinds, decoys, and other popular gear This exhaustive desk reference provides a never before seen look into the history and engineering of archery, theories and trends in game discipline, and, of course, an exhaustive catalog of archery equipment both new and traditional.

A Synopsis of Biology W. B. Crow,2013-10-22 A Synopsis of Biology summarizes the entire field of biology using a telegraphic style. The discussions are organized around seven themes: form and structure (morphology); functions (physiology); organism and environment (ecology); evolution and heredity (genetics); plant classification (systematic botany); animal classification (systematic zoology); and applications of biology (applied biology). Comprised of seven sections, this book begins with a detailed account of the morphology of living and non-living things, followed by an assessment of the origin of life. The reader is then introduced to reproduction (vegetative, sexual, and asexual); plant and animal tissues; seeds and seedlings; and metameric segmentation. Subsequent chapters explore matter and energy; organic and inorganic compounds; dermal excretion and thermo-regulation; periodicity and seasonal phenomena; and

the life of rivers and lakes. The book also examines parasitism; mating and courtship; natural, artificial, and sexual selection; cultivation of plants; and domestication of animals. This monograph will be useful to research workers, degree students, and others interested in biology.

The Practical Guide to Man-Powered Weapons and Ammunition Richard Middleton, 2007-10-17 David slew Goliath with his slingshot: for millennia that was the norm, as men used a variety of non-explosive weapons to fire small stones and carefully rounded bullets of clay, glass, and even steel and lead. This unusual study explores in practical detail the many ways, old and new, in which man shot projectiles without recourse to gunpowder. They include the bow and arrow, a favorite for the last 10,000 years; pump-up air guns; blowpipes; catapults; and homemade lead musketballs. There's information on ammunition and velocity, as well as a lively personal narrative filled with humor and the spirit of experimentation.

The Practical Guide to Man-powered Bullets Richard Middleton, 2005 People have long been shooting small stones and carefully rounded bullets of clay, glass, steel, and lead from weapons without using gunpowder. And the bow and arrow has been man's choice all over the world and throughout history at times when modern firearms have been unavailable or unsuitable. In America, there is currently an explosion of interest in making primitive archery tackle--wooden bows, flint arrowheads, natural fiber strings. The author has made and shot flint-tipped arrows from many bows of his own making. He first noticed, twenty years ago, that no one has written a book on catapults, and started to keep records of his own experiments in that and other related fields, leading to this book, which explores many of the ways, old and new, in which people have shot bullets by force of their own muscles.

The Theory and Practice of Archery Horace A

Ford, 2013-09 This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1887 edition. Excerpt: ...any further draw; secondly, to draw the arrow within an inch or a little more of home, ' aiming then, and loosing after the completion of the draw; and thirdly, the method of combining the operations of drawing and aiming so continuously that the loose is the uninterrupted completion of the draw. It is unnecessary to consider the distinct method of drawing up and letting out again before the loose, or the uncertain method of fraying up and down, or playing as it were at fast-and-loose a bit before the loose, as no archer would adopt any such uncertain style as a matter of choice; though such stuttering and hiccoughing performances may occasionally bring back an erring arrow to its duty, or may arise from the loss of nerve and the departure of the crisp finish from what was once steady and unhesitating. Any movement of the bow-hand in drawing up from the left towards the right should be avoided, as that movement tends to contract instead of expanding the chest; therefore great care should be taken, when lateral movement is used in drawing up, to avoid passing the line of aim in moving the bow-hand towards the left. Though the theory and practice of aiming will be fully treated in another chapter, some reference must here be made to aiming, although it may lead to apparently unnecessary repetition. Eeference has already, somewhat prematurely, been made to the line of aim, and also to the length to be shot. Now it is clear that the success of a scientific shot must be the result of the exact combinations of the right line of aim, and the correct level of the bow-and loosing-hands by which to attain the length. In drawing, the process by which the line of aim and the level are arrived at must be

associated in practice, but may be considered..
