A Constructed View Joseph Rosa, Esther McCoy, Julius Shulman, 1999 Julius Shulman, one of the great master of architectural photography, is the preeminent recorder of early California modernism. By 1927, when he was sixteen, Shulman was already using the family Brownie box camera to document his Southern Californian surroundings and experiences; in 1936, his professional career was launched when he sent Richard Neutra some uncommissioned photographs of the architect's Kun House. Shulman went on to document the famous Case Study House Program (architects included Charles and Ray Eames, Pierre Koenig, and Eero Saarinen) and also the architecture of the 1930s through the 1980s, especially that of Southern California, but also country and worldwide. His subjects included the buildings of R.M. Schindler, John Lautner, Raphael Soriano, Frank Lloyd Wright, Mies van der Rohe, Oscar Niemeyer, among many others. Through his work, Shulman defined the image of Los Angeles and framed the architecture of the time for a global audience. In addition to an overview of Shulman's career and photographic oeuvre, this book emphasizes Shulman's method of constructing photographic views. These constructions, which complemented his innate ability to compose striking photographs, often transcend reality to capture the spirit, time and place of a work of architecture. An analysis of architecture's visual presentation examines not only the media of the era--John Entenza's Arts & Architecture, for instance--but also the work of Shulman's photographic contemporaries. Joseph Rosa is chief curator of the National Building Museum in Washington, D.C., and the author of numerous essays and books, including Rizzoli's *Albert Frey, Architect*. He received his architecture degree from Columbia University and is currently a doctoral candidate in the university's Graduate School of Architecture, Planning and Preservation. Esther McCoy was the foremost architectural historian of Southern California. Her books include *Modern California Houses*, *Five California Architects*, and *Vienna to Los Angeles: Two Journeys*.

New Architecture Los Angeles, 2019-04-16 This exhilarating and richly illustrated guide to Los Angeles's most exciting new buildings establishes the city as a mecca for forward-thinking and environmentally conscious architecture. Some of the world's leading architects are making their mark on Los Angeles's cityscape with exciting and innovative projects. Fifty of the most striking buildings are profiled in this book that features every type of architecture--houses, municipal structures, art museums, office buildings, performance spaces, and houses of worship. Some of the world's leading design firms, including Diller Scofidio + Renfro, Eric Owen Moss Architects, Selldorf Architects, and wHY Architecture, have contributed to the city's structural vernacular. Architectural Photography Joseph W. Molitor,1976

The American Architectural Photographer ,1994

Architectural Photography Michael G. Harris,1995 The subject matter of the architectural photographer is the structure of buildings, both inside and out, for which there is a wide variety of demands. As a perfectionist art form, architectural photography is a methodical process demanding patience and clinical precision from its practitioners, combined with an experienced understanding of the potential and effects of natural light. Architectural Photography approaches the subject from the perspective of the architect, including a brief history of architecture and a glossary of architectural terminology. Having outlined the underlying theories and applications of camera movements, filters, composition and light (both natural and photographic), it takes you off on assignment. A step-by-step approach guides you through the shooting sequence, and two chapters are

devoted to creative possibilities and practical solutions to typical problems. The conclusion of the book is an analysis of the results of ten successful published assignments, examining them in terms of both photography and graphic design.

Building with Light Robert Elwall, 2004 Ever since its invention, photography has enjoyed a close and mutually stimulating relationship with architecture - an association underlined by one description of photography as building with light. So well established is this link that photography is now regarded as the easiest and most reliable means of making architecture and its ideas accessible to a wider public. Our first, sometimes our only, impression of a building often comes from a photograph, and the skilled photographer can help us to see even the most familiar structures with a fresh eye. This book offers a lively exploration of the development of architectural photography and some of its key themes. From the earliest examples of the genre in the nineteenth century to today's digital revolution, Robert Elwall skilfully focuses on the changing aesthetic of the medium worldwide. Included are such topics as the early influence of architectural drawing; the growth of specialist photographic firms documenting the nineteenth-century building boom; the influence of photography on both architectural practice and history; the invention of half-tone reproduction; the role of photography in the spread of Modernism; the impact of colour photography during the 1970s and 1980s; and the increasing use of computers to shape a new direction. Authoritatively written by a world-renowned expert and illustrated with arresting images from collections throughout the world, this study is essential reading for anyone interested in architecture, photography and the history of their special relationship.
