Software for Calculating Vegetation Disturbance and Recovery by Using the Equivalent Clearcut Area Model Alan A. Ager, 2005 The use of cumulative watershed effects models is mandated as part of interagency consultation over projects that might affect habitat for salmonids federally listed as threatened or endangered. Cumulative effects analysis is also required by a number of national forest plans in the Pacific Northwest Region (Region 6). Cumulative watershed effects in many cases are measured with the equivalent clearcut area (ECA) model, which generates an index of cumulative disturbance by considering disturbance type, extent, and recovery over time. Although the model has many limitations, it provides an index of vegetative disturbance that can be used to compare the existing condition of different watersheds, and the potential impacts among land management alternatives. Calculating ECA on multiple watersheds and management scenarios for project-level analysis is a tedious process. We automated the process with a program called Equivalent Treatment Area Calculator to streamline its application on national forests in the Blue Mountains of eastern Oregon. The program, operation, and limitations of the ECA model are described in this paper.

Eco-Architecture V C.A. Brebbia, R. Pulselli, 2014-09-24 This book contains the proceedings of the fifth International Conference on Harmonisation between Architecture and Nature (Eco-Architecture 2014). Eco-Architecture implies a new approach to the design process intended to harmonise its products with nature. This involves ideas such as minimum use of energy at each stage of the building process, taking into account the amount required during the extraction and transportation of materials, their fabrication, assembly, building erection, maintenance and eventual future recycling. Another important issue is the adaptation of the architectural design to the natural environment, learning from nature and long time honoured samples of traditional constructions. The papers in this book deal with topics such as building technologies, design by passive systems, design with nature, cultural sensitivity, life cycle assessment, resources and rehabilitation and many others. Also included are case studies from many different places around the world. Eco-Architecture by definition is a highly multi-disciplinary subject. Eco-Architecture V: Harmonisation between Architecture and Nature will therefore be of interest to, in addition to architects, many other professionals, including engineers, planners, physical scientists, sociologists and economists. Topics covered include: Design with nature; Energy efficiency; Building technologies; Ecological impacts of materials; Bioclimatic design; Water quality; Green facades; Ecological and cultural sensitivity; Education and training; Case studies; Design by passive systems; Adapted reuse; Life cycle assessment and durability; Transformative design; Sustainability indices in architecture.

Cutaneous Manifestations of Child Abuse and Their Differential Diagnosis Robert A.C.

Bilo,Arnold P. Oranje,Tor Shwayder,Christopher J. Hobbs,2012-08-30 The interpretation of skin lesions in children that may be due to abuse is often not straightforward, and many reports have been published on dermatological disorders and accidental injuries that were unjustly regarded as signs of child abuse. This book describes in detail the cutaneous manifestations of the physical abuse of children and devotes particular attention to differential diagnosis. Careful guidance is provided on the optimal evaluation of children presenting with findings potentially attributable to abuse. The numerous images and detailed background information will develop the ability of the reader to assess and interpret the clinical signs of abuse, and to distinguish these signs from other causes of injury, such as accidents and self-mutilation, and dermatological disorders. Cutaneous Manifestations of Child Abuse will be invaluable for pediatric dermatologists, pediatricians, forensic experts, and others who deal with the physical abuse of children.
