**The Official U.S. Army Fitness Training Handbook** Department of the Army,2021-12-09 A soldier's level of physical fitness has a direct impact on his combat readiness. The many battles in which American troops have fought underscore the important role physical fitness plays on the battlefield. The renewed nationwide interest in fitness has been accompanied by many research studies on the effects of regular participation in sound physical fitness programs. The overwhelming conclusion is that such programs enhance a person's quality of life, improve productivity, and bring about positive physical and mental changes. Not only are physically fit soldiers essential to the Army, they are also more likely to lead enjoyable, productive lives. This manual is primarily concerned with issues relating directly to the development and maintenance of the five components of physical fitness: ØCardiorespiratory (CR) endurance--the efficiency with which the body delivers oxygen and nutrients needed for muscular activity and transports waste products from the cells. ØMuscular strength--the greatest amount of force a muscle or muscle group can exert in a single effort. ØMuscular endurance--the ability of a muscle or muscle group to perform repeated movements with a submaximal force for extended periods of time. ØFlexibility--the ability to move the joints (for example, elbow or knee) or any group of joints through an entire, normal range of motion. ØBody composition--the amount of body fat a soldier has in comparison to his total body mass. **The Army Combat Fitness Test** U. S. Army,2020-02-29 Our nation's greatest assets - our Soldiers - face a dynamic, competitive, and lethal operational environment (OE) that has evolved in recent years, one in which our adversaries will employ a mix of traditional, unconventional, and hybrid strategies. Our Army's physical readiness program must evolve to keep pace with the demands of modern war - our physical fitness test must evolve as well. Based on results of years of scientific study, the Secretary and Chief of Staff of the Army have directed replacement of the Army Physical Fitness Test (APFT). While the legacy APFT is an acceptable test for measuring general fitness, it does not adequately assess the domains of combat physical fitness. The six-event Army Combat Fitness Test (ACFT) was developed to better predict a Soldier's readiness for the demands of the modern battlefield. Like combat, the ACFT is both age and gender neutral. The desired end-states of ACFT implementation are an increase in physical readiness...

**Publications Combined: Army Combat Fitness Test (ACFT) Training Guide, Handbook, Equipment List, Field Testing Manual & More** ,2019-03-05 Over 600 total pages ... CONTENTS: Army Combat Fitness Test Training Guide Version 1.2 FIELD TESTING MANUAL Army Combat Fitness Test Version 1.4 Army Combat Fitness Test CALL NO. 18-37, September 2018 FM 7-22 ARMY PHYSICAL READINESS TRAINING, October 2012 IOC TESTING - ACFT EQUIPMENT LIST (1 X LANE REQUIREMENT) Version 1.1, 4 September 2018 ACFT Field Test Highlight Poster (Final) OVERVIEW: The Army will replace the Army Physical Fitness Test (APFT) with the Army Combat Fitness Test (ACFT) as the physical fitness test of record beginning in FY21. To accomplish this, the ACFT will be implemented in three phases. Phase 1 (Initial Operating Capability – IOC) includes a limited user Field Test with approximately 60 battalion-sized units from across all components of the Army. While the ACFT is backed by thorough scientific research and has undergone several revisions, there are still details that have not been finalized. The ACFT requires a testing site with a two-mile run course and a flat field space approximately 40 x 40 meters. The field space should be grass (well maintained and cut) or artificial turf that is generally flat and free of debris. While maintaining testing standards and requirements, commanders will make adjustments for local conditions when necessary. The start and finish point for the two-mile run course must be in close proximity to the Leg Tuck station. When test events are conducted indoors, the surface must be artificial turf only. Wood and rubberized surfaces are not authorized as they impact the speed of the Sprint-Drag-Carry. When environmental conditions prohibit outdoor testing, an indoor track may be used for the 2 Mile Run. The Test OIC or NCOIC are responsible to inspect and certify the site and determine the number of testing lanes. There should not be more than 4 Soldiers per testing group for the SPT, HRP, and SDC. The OIC or NCOIC must add additional lanes or move Soldiers to a later testing session to ensure no more than 4 Soldiers per testing group. Concerns related to Soldiers, graders, or commanders will be addressed prior to test day. The number of lanes varies by number of Soldiers testing. A 16-lane ACFT site will have the following: ACFT specific test equipment requirements: 16 hexagon/trap bars (60 pounds), each with a set of locking collars. While all NSN approved hexagon bars must weigh 60 pounds, there is always a small

manufacturer's production tolerance. The approved weight tolerance for the hexagon bar is + 2 pounds (58-62 pounds). Weight tolerance for the hexagon bar and therefore the 3 Repetition Maximum Deadlift does not include the collars. On average hexagon bar collars weigh < 2.0 pounds per pair and are considered incidental to the total weight of the MDL weight. Approximately 3,000 lbs. of bumper plates. 16 x 10 lb. medicine ball 16 x nylon sled with pull straps. 32 x 40 lb. kettle bells. Permanent or mobile pull up bars (16 x pull-up bars at approximately 7.5 feet off the ground with, step-ups for shorter Soldiers). Common unit equipment for set-up and grading: 16 stop watches. 8 x 25m tape measures. 8 x wooden or PVC marking sticks for the SPT. One stick for every two lanes. 70 x 18" traffic cones. 50 field / dome cones. A soft, flat, dry test area approximately 40m x 40m on grass or artificial turf (half of a soccer or football field). A site that is free of any significant hazards. A preparation area (can be same as briefing area) to conduct Preparation Drill. A generally flat, measured running course with a solid, improved surface that is not more than 3 percent uphill grade and has no overall decline (start and finish must be at the same altitude).

Preparing for the Army Combat Fitness Test NSCA -National Strength & Conditioning Association, Nate Palin, Rob Hartman, 2020-09-18 Preparing for the Army Combat Fitness Test is the ideal resource to help you assess your readiness and train for the Army Combat Fitness Test (ACFT). Because soldiers operate on a three-dimensional battlefield where physical demands are often variable and unpredictable, the Army's revised physical test provides a more diverse measurement of a soldier's physical abilities than its predecessor. But if you are one of the 200,000 annual recruits or the 1.2 million active duty soldiers who must pass these new protocols, this diverse test may bring anxiety and uneasiness. That is where this essential guide can help. Backed by the expertise of the National Strength and Conditioning Association (NSCA), Preparing for the Army Combat Fitness Test is the first book on the market to address the requirements of the ACFT and provide you with the tools you need to be prepared for testing day. Consisting of six events—the 3 Repetition Maximum Deadlift, Standing Power Throw, Hand Release Push-Up–Arm Extension, Sprint-Drag-Carry, Leg Tuck, and Two-Mile Run—the ACFT will test physical characteristics that you can develop and cultivate with the training guidelines in this book. For each testing event, you'll find a description of the test, instructions on performing the test safely and effectively, and scoring standards so you know the minimum performance requirements to pass and avoid being disqualified on testing day. To begin, you will be guided through a self-assessment that will allow you to determine your current readiness and select a training program to maximize your performance outcomes. A variety of sample training plans are provided so you can select a plan based on how much time you have to prepare for the ACFT and the amount of time you have available to train. Choose from 24-, 12-, 8-, or 4-week plans that contain workouts for two, three, four, or five days a week. Setup and execution guidelines are provided for over 100 exercises, so you can safely and effectively execute the exercises assigned within your training program. Accompanying photos visually demonstrate how to perform the exercises. If you don't have access to the necessary equipment for the primary exercises, suggestions are offered for replacement exercises that are similar in movement and training outcome. Completing this comprehensive training resource is valuable supplemental information about nutrition, hydration, physical and mental recovery, and maintaining a healthy lifestyle. The ACFT does not have to feel overwhelming. With a good preparation plan and commitment to training, you can show up on test day with confidence. Preparing for the Army Combat Fitness Test will give you the edge you need to excel and achieve your best on the Army Combat Fitness Test. Get more help from the app! A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield B. East, 2013 In this monograph, Dr. Whitfield Chip East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat.

**Assessing Fitness for Military Enlistment** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on the Youth Population and Military Recruitment: Physical, Medical, and Mental Health Standards, 2006-03-27 The U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing

missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. Assessing Fitness for Military Enlistment examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.
