Phantasmal Spaces Mathias Fuchs, 2019-06-13 Recognizable, recurring spatial settings in video games serve not only as points of reference and signposts for orientation, but also as implicit sources of content. These spatial archetypes denote more than real-world objects or settings: they suggest and bring forward emotional states, historical context, atmospheric *attunement*, in the words of Massumi, and aesthetic programs that go beyond plain semiotic reference. In each chapter, Mathias Fuchs brings to the fore an archetype commonly found in old and new digital games: The Ruin, The Cave, The Cloud, The Portal, The Road, The Forest, and The Island are each analysed at length, through the perspectives of aesthetics, games technology, psychoanalysis, and intertextuality. Gridding these seven tropes together with these four analytical lenses provides the reader with a systematic framework to understand the various complex considerations at play in evocative game design.

Bitumens and Bitumen Emissions, and Some N- and S-heterocyclic Polycyclic Aromatic Hydrocarbons IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, World Health Organization, 2013 This volume of the IARC Monographs provides evaluations of the carcinogenicity of bitumens and their emissions, the N-heterocyclic polycyclic aromatic hydrocarbons benz[a]acridine, benz[c]acridine, dibenz[a,h]acridine, dibenz[a,j]acridine, dibenz[c,h]acridine, carbazole and 7H-dibenzo[c,g]carbazole, as well as the S-heterocyclic polycyclic aromatic hydrocarbons benzo[b]naphtho[2,1-d]thiophene and dibenzothiophene. Bitumens are produced by distillation of crude oil during petroleum refining, and also occur naturally. Bitumens can be divided into six broad classes, according to their physical properties and specifications required for different applications. The major use (about 80%) of bitumens is for road paving; other uses include roofing, waterproofing, sealing and painting. The term bitumen should not be confused with asphalt, which refers to the mixture of bitumen (4-10% by weight), small stones, sand and filler used for road paving. Bitumens are complex mixtures that contain a large number of organic chemical compounds. Application of bitumens may generate emissions (fumes and vapours) that may contain, among volatile and non-volatile compounds, a number of known or probable carcinogens. An IARC Monographs Working Group reviewed epidemiological evidence, animal bioassays, and mechanistic and other relevant data to reach conclusions as to the carcinogenic hazard to humans of various occupations that entail exposure to bitumens and bitumen emissions, including road paving, roofing, and application of mastic asphalt, and to various heterocyclic polycyclic aromatic compounds.
