Early Athens Eirini M. Dimitriadou,2019-03-31 This volume is one of the most important works on ancient Athens in the last fifty years. The focus is on the early city, from the end of the Bronze Age--ca. 1200 BCE--to the Archaic period, when Athens became the largest city of the Classical period, only to be destroyed by the Persians in 480/479 BCE. From a systematic study of all the excavation reports and surveys in central Athens, the author has synthesized a detailed diachronic overview of the city from the Submycenaean period through the Archaic. It is a treasure trove of information for archaeologists who work in this period. Of great value as well are the detailed maps included, which present features of ancient settlements and cemeteries, the repositories of the human physical record. Over eighty additional large-scale, interactive maps are available online to complement the book.

Tunnels and Underground Cities. Engineering and Innovation Meet Archaeology, Architecture and Art Daniele Peila, Giulia Viggiani, Tarcisio Celestino, 2019-04-17 Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground – the black circle in the logos – it will be possible to preserve and enhance the quality of the space at ground level – the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.

Sculpture and Archaeology Andrew Jones, 2017-07-05 In recent years the intersections between art history and archaeology have become the focus of critical analysis by both disciplines. Contemporary sculpture has played a key role in this dialogue. The essays in this volume, by art historians, archaeologists and artists, take the intersection between sculpture and archaeology as the prelude for analysis, examining the metaphorical and conceptual role of archaeology as subject matter for sculptors, and the significance of sculpture as a three-dimensional medium for exploring historical attitudes to archaeology.

Athens The City Beneath the City Liana Parlama, Nicholas Stampolidis, 2001-03 The extensive excavations required to build the new Athens Metro have unearthed archaeological finds of staggering importance. Under the modern city, untouched for thousands of years, lay a wealth of artifacts and the remains of homes, market-places, and temples from ancient Athens. This full-color book presents the astonishing discoveries from this city beneath the city -- bringing the capital of the classical world to life once again. Working just steps ahead of the Metro construction, archaeologists labored to preserve the ancient city, removing entire foundations intact. What they found can be seen in an extraordinary exhibition at the Museum of Cycladic Art in Athens -- and in this glorious book. Spanning Athenian life from the Mycenaean to the Byzantine eras, the 500 objects featured range from statues, pottery, and jewelry to tools, toys, a dog collar, and a large stone slab listing the dead from three battles of the Peloponnesian War, mentioned by Thucydides. On every captivating page, Athens: The City Beneath the City resonates with new information about the dynamic culture of ancient Greece.

From Olympic Administration to Olympic Governance Emmanuel Bayle, Jean-Loup Chappelet, 2017-10-02 Lausanne, the Swiss city IOC (International Olympic Committee) President Juan Antonio Samaranch honored with the title Olympic capital in 1994, is now the administrative capital of world sport. The past century has presented Olympism with many challenges and that continues to be the case today; the issues may have changed, but they are no less numerous. Controversies over phony amateurism, the two Chinas and the creation of a modern Olympia have been resolved, only to be replaced by questions of governance, compliance, strategy, responsible management, the size of the Games, the scarcity of bids and new forms of doping and corruption. All these themes are examined in the articles that make up this book

published about 100 years after the establishment of the IOC’s headquarters in Lausanne. This book was originally published as a special edition of Sport in Society.
