*The Royal Trials (Last Gate of the Emperor #2)* Kwame Mbalia, Prince Joel Makonnen, 2022-07-19 From Kwame Mbalia and Prince Joel David Makonnen comes an Afrofuturist adventure about a mythical Ethiopian empire. Sci-fi and fantasy combine in this epic journey to the stars. Yared has traveled a long way to find his place in the universe. Light years, even. Though the battle of Addis Prime is over, the spacefaring Axum Empire is still fractured. The kingdom once gave their technology away free of charge, to better humankind. Now, having been missing for over a decade, they're returning to the planet where their galaxy-spanning civilization began—Earth. But they find the planet in disarray. Old Earth's atmosphere is a mess of junked shuttles and satellites. This is especially true of Debris Town, an orbital flotilla where poor spacefarers—left to rot by the Intergalactic Union that rose up in Axum's place—have taken to piracy to survive. Yared is set to speak at the opening of the Royal Trials, a competition of the best exo pilots in the Sol System. But on the day of his speech, the pirates launch an attack! The siege sets off a chain of events that will lead Yared into the depths of Old Earth—and the jaws of a cruel betrayal. There's more to the pirates—and Debris Town—than anyone saw coming.

**The Ecology and Evolution of Heliconius Butterflies** Chris D. Jiggins, 2017-01-27 The *Heliconius* butterflies are one of the classic systems in evolutionary biology and have contributed hugely to our understanding of evolution over the last 150 years. Their dramatic radiation and remarkable mimicry has fascinated biologists since the days of Bates, Wallace, and Darwin. *The Ecology and Evolution of Heliconius Butterflies* is the first thorough and accessible treatment of the ecology, genetics, and behaviour of these butterflies, exploring how they offer remarkable insights into tropical biodiversity. The book starts by outlining some of the evolutionary questions that *Heliconius* research has helped to address, then moves on to an overview of the butterflies themselves and their ecology and behaviour before focussing on wing pattern evolution, and finally, speciation. Richly illustrated with 32 colour plates, this book makes the extensive scientific literature on *Heliconius* butterflies accessible to a wide audience of professional ecologists, evolutionary biologists, entomologists, and amateur collectors.

**Treatise on International Criminal Law** Kai Ambos,2022 International criminal law and justice is a flourishing field which has led, in recent years, to new international criminal tribunals and new mechanisms for investigation and holding criminals to account. These developments have, in turn, led to an increasing volume and greater consolidation of case law, and even more scholarly attention. The second edition of this volume of Kai Ambos' seminal treatise has been revised and rewritten in parts to provide coverage of recent developments in the 'Special Part' of international criminal law: namely, the specific crimes and sentencing. Amongst other updates, there are significant extensions of the discussion on sexual and gender-based crimes; the introduction of environmental crimes into international criminal law; further elaboration on the nexus requirement in war crimes and asymmetrical conflicts (e.g., ISIS); and reference to the newly introduced war crimes of the ICC Statute and of the peculiarities of cyber-attacks and other emerging activities. The volume complements Volume I of the treatise on issues relevant to the foundations, general part of international criminal law, and general principles of international criminal justice. Taken together with the other new editions of the three-volume series, this second edition provides an exhaustive guide to every aspect of international criminal law, from fundamental principles to procedures and implementation. Kai Ambos' Treatise remains an indispensable reference work for academics and practitioners of international criminal law.

*Avoiding Attack* Graeme D. Ruxton,William L. Allen,Thomas N. Sherratt,Michael P. Speed,2019-01-31 Avoiding Attack discusses the diversity of mechanisms by which prey avoid predator attacks and explores how such defensive mechanisms have evolved through natural selection. It considers how potential prey avoid detection, how they make themselves unprofitable to attack, how they communicate this status, and how other species have exploited these signals. Using carefully selected examples of camouflage, mimicry, and warning signals drawn from a wide range of species and ecosystems, the authors summarise the latest research into these fascinating adaptations, developing mathematical models where appropriate and making recommendations for future study. This second edition has been extensively rewritten, particularly in the application of modern genetic research techniques which have transformed our recent understanding of adaptations in evolutionary genomics and phylogenetics. The book also employs a more integrated and systematic approach, ensuring that each chapter has a broader focus on the evolutionary and ecological consequences of anti-predator adaptation. The field has grown and developed considerably over the last decade with an explosion of new research literature, making this new edition timely.

The Dam Buster Story Jonathan Falconer,2020-07-10 The raid on the great dams of western Germany by Lancaster bombers of 617 Squadron in May 1943 is one of the best known, most widely told stories of the Second World War. Led by Wing Commander Guy Gibson, each Lancaster in the nineteen-strong force was equipped with the revolutionary bouncing bomb designed by the inventor Barnes Wallis. Two of the three main dams were breached and the unleashed floodwaters inundated the Ruhr valley below, killing thousands and causing German industry to grind to a halt. In later years the strategic impact of the raid was deemed to be less than was thought at the time, but the fillip it gave to civilian and Service moral in wartime Britain was incalculable. The Dam Busters Story is a short but authoritative narrative account of the RAF's famous dam buster raid, supported by a superb selection of colour and black and white photographs. Jonathan Falconer's narrative covers the development of the bouncing bomb, the planning of the raid, its dramatic execution and aftermath. An appendix provides a definitive listing of all the Lancasters and crews that flew in the raid, and their fates.
