Handbook of Sustainable Transport Carey Curtis,2020-12-25 Exploring the need for a sustainable transport paradigm, which has been sought after by local and national authorities internationally over the last 30 years, this illuminating and timely Handbook offers insights into how this can be secured more broadly and what it may involve, as well as the challenges that the sustainable transport approach faces. The Handbook offers readers a holistic understanding of the paradigm by drawing on a wide range of research and relevant case studies that showcase where the principles of sustainable transport have been implemented.

Modelling Intelligent Multi-Modal Transit Systems Agostino Nuzzolo,William H. K. Lam,2017-02-17 The growing mobility needs of travellers have led to the development of increasingly complex and integrated multi-modal transit networks. Hence, transport agencies and transit operators are now more urgently required to assist in the challenging task of effectively and efficiently planning, managing, and governing transit networks. A pre-condition for the development of an effective intelligent multi-modal transit system is the integration of information and communication technology (ICT) tools that will support the needs of transit operators and travellers. To achieve this, reliable real-time simulation and short-term forecasting of passenger demand and service network conditions are required to provide both real-time traveller information and successfully synchronise transit service planning and operations control. Modelling Intelligent Multi-Modal Transit Systems introduces the current trends in this newly emerging area. Recent developments in information technology and telematics have enabled a large amount of data to become available, thus further attracting transport researchers to set up new models outside the context of the traditional data-driven approach. The alternative demand-supply interaction or network assignment modelling approach has improved greatly in recent years and has a crucial role to play in this new context.

Low Carbon Mobility Transitions Debbie Hopkins,James Higham,2016-11-30 A thorough examination of how methods of low-carbon transport can be implemented using international case studies, with contributions from recognised industry experts, academics and policy makers.

Fourth International Conference on Current and Future Trends in Bridge Design, Construction and Maintenance B. Barr,2006 This is a state-of-the-art reference, an exchange of innovative experience, creative thinking and industry forecasts. This volume presents the proceedings of the fourth international conference in this series based in the Asia Pacific region, in Kuala Lumpur in October 2005 and is applicable to all sectors of the bridge engineering community. BACKGROUND KNOWLEDGE AND FUTURE PERFORMANCE The Institution of Civil Engineers has collaborated with internationally renowned bridge engineers to organise three successful conferences to celebrate the enormous achievements made in the field of bridge engineering in recent years. As a discipline, bridge engineering not only requires knowledge and experience of bridge design and construction techniques but must also deal with increasing challenges posed by the need to maintain the long-term performance of structures throughout an extended service life. In many parts of the world natural phenomena such as seismic events can cause significant damage to force major repairs or reconstruction. Therefore, it is appropriate that the first plenary session of this conference is entitled Engineering for Seismic Performance. READERSHIP This compilation of papers will benefit practising civil and structural engineers in consulting firms and government agencies, bridge contractors, research institutes, universities and colleges. In short, it is of importance to all engineers involved in any aspect of the design, construction and repair, maintenance and refurbishment of bridges.

Decarbonising Urban Mobility with Land Use and Transport Policies The Case of Auckland, New Zealand OECD,2020-06-16 The report presents an in-depth analysis of various policies that aim to reduce the greenhouse gas emissions of urban transport. Decarbonising transport lies at the core of efforts to mitigate climate change and has close links to urban sustainability and housing affordability. The report identifies the drivers of rising emissions in the urban transport sector and offers pathways to reduce them through a combination of transport and land use policies.

Transportation Amid Pandemics Junyi Zhang,Yoshitsugu Hayashi,2022-09-18 Transportation Amid Pandemics: Practices and Policies is the first reference on pandemics (especially COVID-19) in the context of transport, logistics, and supply chains. This book investigates the relationships between pandemics and transport and evaluates impacts of COVID-19 and effects of policy responses to address them. It explores how to recover from pandemics, reveals governance for immediate policy responses and future innovations, suggests strategies for post-pandemic sustainable and resilient development, shares lessons of COVID-19 policymaking across countries, and discusses how to transform transport systems for a better future. Transportation Amid Pandemics offers transport researchers and policymakers the scientific evidence they need to support their decisions and solutions against pandemics. Curiosity and research brought me to discover an excellent handbook covering the relations between COVID 19 and the transport reality. It is called Transportation amid Pandemics -Lessons Learned from COVID-19 and has been published this year. 2022 happens to be the year of the 50th anniversary of the first report to The Club of Rome The Limits to Growth. The new book covers evidences from all over the world, and offers policy recommendations from a great variety of perspectives. Ernst Ulrich von Weizsaecker Represents the collective efforts of the World Conference on Transport Research Society (WCTRS) Uniquely deals with intertwined issues of pandemics and transport Investigates both successful and problematic policy measures Emphasizes evidence-based policymaking from cross-sectoral and transdisciplinary perspectives Transfers lessons from the COVID-19 pandemic to future generations

The Public City Brendan Gleeson,Beau B Beza,2014-11-25 Paul Mees' urban ideal counted on watchful, confident and well-informed citizenry to work collectively in a quest for fair and just cities. As such, The Public City is largely a critique of neo-liberalism and its arguably negative influence on urban prospects. As Mees explained it, neo-liberal urbanism was much more than a political aberration; it was a threat that imposed many costly failures in an age overshadowed by grave ecological challenges. Fifteen of Australia and New Zealand's leading urban scholars, including Professor Emeritus Jean Hillier and Professor Brendan Gleeson, have contributed to this collection. The Public City includes a foreword by the late Professor Sir Peter Hall, a world leader in urban planning from Britain. Kenneth Davidson, one of Australia's top economic columnists, has also contributed a chapter. The collective works in this book extend beyond an analysis of urban patterns to provide a blueprint for the improvement of civic and institutional purpose in the creation of the public city.

Human Transit, Revised Edition Jarrett Walker,2024-02-06 Transportation expert Jarrett Walker believes that transit can be simple, if we focus on the underlying geometry that all transit systems share. In Human Transit, Revised Edition, he provides the basic tools and critical questions needed to make smarter decisions about designing and implementing services, refreshed with updated information and examples. The first edition of Human Transit, published in 2011, has become a classic for professionals, advocates, and interested citizens. No other book explains the basic principles of public transit in such lively and accessible prose, all based on a respect for your right to form your own opinion. Walker's goal is not to make you share his values, but to give you the tools to clarify and advocate for yours. Walker has updated and expanded the book to deepen its explanations. His ongoing work as a network planning consultant has provided a wealth of new examples, images, and tools. New topics include the problem with specialization; the role of flexible or "demand response" services; how to know when to redesign your network; and responding to tech-industry claims that transit will soon be obsolete. Finally, he has also added a major new section exploring the idea of access to opportunity as a core measure of

transit’s success. Whether you are a professional or a concerned citizen, the revised edition of this accessible guide can help you to achieve successful public transit that will enrich any community.

Technology and the City Tan Yigitcanlar,2016-04-28 The interplay between smart urban technologies and city development is a relatively uncharted territory. Technology and the City aims to fill that gap, exploring the growing importance of smart technologies and systems in contemporary cities, and providing an in-depth understanding of both theoretical and practical aspects of smart urban technology adoption, and its implications for our cities. Beginning with an elaboration of the historical significance of technologies in economic growth, social progress and urban development, Yigitcanlar introduces the most prominent smart urban information technologies. The book showcases significant smart city practices from across the globe that uses smart urban technologies and systems most effectively. It explores the role of these technologies and asks how they can be adopted into the planning, development and management processes of cities for sustainable urban futures. This pioneering volume contributes to the conceptualisation and practice of smart technology and system adoption in our cities by disseminating both conceptual and empirical research findings with real-world best practice applications. With a multidisciplinary approach to themes of technology and urban development, this book is a key reference source for scholars, practitioners, consultants, city officials, policymakers and urban technology enthusiasts.

No Left Turn Chris Trotter,2010-12-01 A bold and passionate re-examination of New Zealand political history by a leading social commentator. The way some histories tell it, Europeans came to New Zealand keen to establish a Little Britain in the South Seas. Not so, says Chris Trotter. Most nineteenth century immigrants wanted something better than the misery and oppression of the world they had left, and Trotter reveals just how close they and their descendants came to building a new one. On each occasion, however, their achievements were resisted, and ultimately overturned, by those who saw New Zealand simply as a source of profits. Trotter pulls no punches in describing the methods these partisans of profit used to ensure there was no Left turn: jamming radio broadcasts, political arson - even murder. From Massey's Cossacks to Muldoon's riot squads; violence and repression have been the Right's weapons - not the Left's. Charting the evolution of New Zealand's unique brand of democratic socialism, Trotter offers insightful and often surprising verdicts on the leading participants, including John A Lee, Peter Fraser, Fintan Patrick Walsh, David Lange and Helen Clark. Passionately argued, infused with poetic imagery and comprehensively researched, No Left Turn is a unique and indispensable contribution to our political and social history - an inspiration for anyone who puts money second and people first, and a deliberate provocation to everyone else.
