The Oxford Handbook of Topic Theory Danuta Mirka,2014-10-16 Topics are musical signs that rely on associations with different genres, styles, and types of music making. The concept of topics was introduced by Leonard Ratner in the 1980s to account for cross-references between eighteenth-century styles and genres. While music theorists and critics were busy classifying styles and genres, defining their affects and proper contexts for their usage, composers started crossing the boundaries between them and using stylistic conventions as means of communication with the audience. Such topical mixtures received negative evaluations from North-German critics but became the hallmark of South-German music, which engulfed the Viennese classicism. Topic theory allows music scholars to gain access to meaning and expression of this music. The Oxford Handbook of Topic Theory consolidates this field of research by clarifying its basic concepts and exploring its

historical foundations. The volume grounds the concept of topics in eighteenth-century music theory, aesthetics, and criticism. Documenting historical reality of individual topics on the basis of eighteenth-century sources, it relates topical analysis to other methods of music analysis conducted from the perspectives of composers, performers, and listeners. With a focus on eighteenth-century musical repertoire, The Oxford Handbook of Topic Theory lays the foundation under further investigation of topics in music of the nineteenth, twentieth, and twenty-first centuries.

Off-Earth Erika Nesvold, 2023-03-07 Can we do better in space than we've done here on Earth? We've pinpointed the destination, refined the technology, designed the habitat, outfitted our space residents. Are we forgetting something? A timely reminder that it's not just rocket science, this thought-provoking book explores the all-too-human issues raised by the prospect of settling in outer space. It's worth remembering, Erika Nesvold suggests, that in making new worlds, we don't necessarily leave our earthly problems behind. Accordingly, her work highlights the complex ethical challenges that accompany any other-worldly venture—questions about the environment, labor rights, and medical ethics, among others. Any such venture, Nesvold contends, must be made on behalf of all humanity, with global input and collaboration. Off-Earth thus includes historical and contemporary examples from outside the dominant Western/US, abled, and privileged narrative of the space industry. Nesvold calls on experts in ethics, sociology, history, social justice, and

law to launch a hopeful conversation about the potential ethical pitfalls of becoming a multi-planet species—and, ideally, to shed light on similar problems we presently face here on Earth. Space settlement is rapidly becoming ever more likely. Will it look like the utopian vision of Star Trek? Or the dark future of Star Wars? Nesvold challenges us to decide.

Teaching Thermodynamics Jeffrey D. Lewins, 2012-12-06 It seemed appropriate to arrange a meeting of teachers of thermodynamics in the United Kingdom, a meeting held in the pleasant surroundings of Emmanuel College, Cambridge, in September, 1984. This volume records the ideas put forward by authors, the discussion generated and an account of the action that discussion has initiated. Emphasis was placed on the Teaching of Thermodynamics to degree-level students in their first and second years. The meeting, a workshop for practitioners in which all were expected to take part, was remarkably well supported. This was notable in the representation of essentially every UK university and polytechnic engaged in teaching engineering thermodynamics and has led to a stimulating spread of ideas. By intention, the emphasis for attendance was put on teachers of engineering concerned with thermodynamics, both mechanical and chemical engineering disciplines. Attendance from others was encouraged but limited as follows: non-engineering academics, 10%, industrialists, 10%. The record of attendance, which will also provide addresses for direct correspondence, will show the broad cover achieved. I am indeed grateful for the attendance of those outside the engineering

departments who in many cases brought a refreshing approach to discussions of the 'how' and 'why' of teaching thermodynamics. It was also notable that many of those speaking from the polytechnics had a more original approach to the teaching of thermodynamics than those from conventional universities. The Open University however brought their own special experience to bear.
