Kreuzzug gegen Fette Henning Schmidt-Semisch, Friedrich Schorb, 2008-02-01 Übergewicht und Adipositas gelten als die größte gesundheitspolitische Herausforderung der Zukunft. In den USA wird Übergewicht mittlerweile als Todesursache Nummer eins noch vor dem Risikofaktor Rauchen geführt. Auch hierzulande werden, spätestens seitdem Renate Künast das Thema zur Chefsache erklärt hatte, Übergewicht und Adipositas nicht länger als ein medizinisches bzw. ästhetisches Problem, sondern als ein gesellschaftliches Problem angesehen. Dabei werden das gesteigerte öffentliche Interesse sowie die politische Brisanz des Themas meist mit der rasanten Zunahme des Phänomens begründet. Der Band analysiert vor diesem Hintergrund kritisch die gesellschaftlichen Bedingungen, die dem dicken Bauch eine so schillernde Problemmkarriere ermöglicht haben.

Big Fat Lies: How the diet industry is making you sick, fat & poor David Gillespie, 2012-02-22 'Diets and exercise won't help us lose weight. Vitamins and minerals are a waste of money and sometimes downright dangerous. Sugar makes us fat and sick. And polyunsaturated fat gives us cancer and works with sugar to give us heart disease. This book exists because I desperately hope that with a little knowledge we can all vote with our feet and change the rules of the game before the game kills us.' For decades we've been told to eat less, exercise more, eat less saturated fat, eat more polyunsaturated oils, and take vitamin and omega-3 fatty acid supplements. For decades this is what we've done, but the rates of obesity, heart disease, type 2 diabetes, dementia and cancer have never been higher. The real culprits, David Gillespie tells us, are sugar and polyunsaturated oils. Analysing the latest scientific evidence, he shows us why he outlines a plan to avoid them both without missing out or 'dieting'. Gillespie exposes the powerful role the multibillion-dollar food, health and diet industries have played in promoting the health messages we follow – or feel guilty about not following. Discovering the truth about diets, exercise, supplements and processed food is your first step towards improved health, greater happiness and a longer life for you and your family. 'Gillespie is an informed and entertaining writer who makes his subject fascinating, and inspires with his passion and logic.' G MAGAZINE

Ultrafast Optics IV Ferenc Krausz,2004-05-10 The papers in this volume cover the major areas of research activity in the field of ultrafast optics at the present time, and they have been selected to provide an overview of the current state of the art. The purview of the field is the methods for the generation, amplification, and characterization of electromagnetic pulses with durations from the pico-to the attosecond range, as well as the technical issues surrounding the application of these pulses in physics, chemistry, and biology. The contributions were solicited from the participants in the Ultrafast Optics IV Conference, held in Vienna, Austria, in June 2003. The purpose of the conference is similar to that of this book: to provide a forum for the latest advances in ultrafast optical technology. Ultrafast light sources provide a means to observe and manipulate events on the scale of atomic and molecular dynamics. This is possible either through appropriate shaping of the time-dependent electric field, or through the application of fields whose strength is comparable to the binding forces of the electrons in atoms and molecules. Recent advances discussed here include the generation of pulses shorter than two optical cycles, and the ability to measure and to shape them in all degrees of freedom with unprecedented 2 21 2 precision, and to amplify them to the Zettawatt/cm (10 W /cm) range.
