**The Weather Obsession** Lawrie Zion, 2018-02-08 We have come a long way since the days when weather information could only be found in the back pages of newspapers. The Weather Obsession takes the temperature of modern weather media and investigates how it has fuelled our fascination with all things climatic. Weather information now pervades everything from our mobile devices to online news and social media, while the Bureau of Meteorology is a daily destination for millions of us. What has made weather so much more than a mere talking point? What happens when this data becomes big business? And what is at stake when it comes to how the media frames our understanding of the relationship between extreme weather and climate change? The Weather Obsession lifts the lid on our insatiable appetite for meteorological media and shows that while we might not have stopped worrying about the forecast, almost all of us have learnt to love the BOM.

*Watching Weather* Robin Birch, 2009 Click here for a presentation on the Weather and Climate series Watching Weather teaches middle-upper primary students how to read the weather, and predict and forecast future weather patterns. It is part of the Weather and Climate series: explains how weather and weather forecasting work explores different weather and climate conditions investigates how people live with weather and climate Diagrams and maps show the location of weather and climate zones on Earth, and large photos and info

**Weather Rage** Ross Reynolds, 2003-02-13 Some atmospheric disturbances produce the kind of extreme weather events making the national and international news headlines on a regular basis. Just about everyone is interested in knowing more about hurricanes, typhoons and tornadoes. There is often confusion about whether or not they are the same thing and whether, for example, we can control these extremely violent phenomena. Thunder and lightning affect many people but how many of us understand what generates such massive electrical discharges and why they occur more at some times of year than at others? A popular addition to the Science Spectra Series, Weather Rage explains the origin and nature of different types of weather observed across many areas of the world - and those that occur on different 'scales'. Presenting an in-depth look at the main factors underlying weather, this book will be an extremely useful guide for all meteorology students and practitioners as well as a source of reference for all those with an interest in the weather.

*The Australian Weather Book* Keith Colls, Dick Whitaker, Richard Whitaker, 2012 Australia has a unique climate. Learn more about it in this third edition of The Australian Weather Book. This book is a colourful overview of Australia's climate and weather, written in an easily accessible way.

**Training the Ancilla Naïve Bayes Classification System to Provide Quality Control for Weather Radar Data** Susan J. Rennie, Mark Phillip Curtis, Justin R. Peter, Alan Seed, Peter J. Steinle, 2014

**Australian Weather** Archibald John Shields, 1965

*Windows on Meteorology*, 1997 Windows on Meteorology: Australian Perspective answers a host of questions about Australia's weather and climate, and explains the underlying causes of floods, droughts and cyclones. Vivid accounts of dust storms and the mysteries of the 'morning glory' cloud lines are revealed. The book highlights the perception in Aboriginal culture of the connection between seasons and natural cycles, through aspects of Aboriginal mythology and language, and contains a unique Aboriginal seasonal calendar. The influence of climate on Australia's wildlife is illustrated with fascinating accounts of the evolution of burrowing frogs, shrimps and desert kangaroos. A history of Australian meteorology from early European settlement onwards, covers subjects such as a nineteenth century view of the links between climate and health, the development of instruments, cloud physics research and the Southern Oscillation connection. The final chapters bring the reader up to date with the most recent technical developments in research and

applications such as satellite remote sensing, radar and fast response instruments.

**Climate of Australia**, 2008 This practical guide from the Bureau of Meteorology draws together our knowledge about Australia's climate, past and present. It examines typical and extreme weather patterns, long-term variability and the effects of climate change. Fully illustrated throughout, the Climate of Australia contains detailed maps and tables that chart rainfall, temperature, humidity and sunshine. Colour photographs show the variety of landscapes shaped by Australia's climate. Specific case studies of extreme weather events such as cyclones and droughts incorporate satellite and radar imagery. An accompanying CD-ROM contains a full set of monthly climate maps, together with statistical tables from a selection of the Bureau's observation sites.

**Weather Radar Data for Operational Hydrology** Kevin A. Tilford, 1992

Weather Radar Networking C.G. Collier, M. Chapuis, 2012-12-06 Meteorology is by nature a multidisciplinary and transnational subject and COST cooperation has proved to be a flexible and suitable framework at European level for meteorological activities such as the standardisation of observation techniques and harmonised transmission of meteorological data. Although meteorology is not covered by a specific Community programme as such, various Community actions dealing with meteorology are now included in the EEC research programme on climatology (the EPOCH programme - 1989-92) of mechanisms of extreme and sudden concerning particularly the study meteorological events, in order to predict catastrophies and consequently to reduce human and material losses. In the context of COST cooperation, which is supported by the Commission of the European Communities, the COST 73 project (1986-1991) associates 16 countries in Western Europe with the aim of setting up a weather radar network providing real-time measurements of rain, snow or hail precipitations. In this project, radar data are transmitted and combined if appropriate with satellite data - in one or more compositing centres of the participating countries, in order to improve weather forecasting. Together with the COST 73 Management Committee, the Commission of the European Communities organized a seminar on this matter, in Brussels on 5-8 September 1989, at the half-way stage of the project.

*Types of Australian weather* Henry Ambrose Hunt, 2021-04-11 The author, from his observations as a meteorologist, shares with readers his report regarding types of Australian weather. Many of these appear to be peculiar to Australia, and at the same time connected with Equatorial and other weather. That they throw much new light upon the source of the greater part of Australian rain, and show how these rain storms develop out of ordinary weather conditions is certain; at the same time, they form an important contribution to the study of weather in the Southern Hemisphere generally.

**Doppler Radar Observations** Joan Bech, Jorge Luis Chau, 2012-04-05 Doppler radar systems have been instrumental to improve our understanding and monitoring capabilities of phenomena taking place in the low, middle, and upper atmosphere. Weather radars, wind profilers, and incoherent and coherent scatter radars implementing Doppler techniques are now used routinely both in research and operational applications by scientists and practitioners. This book brings together a collection of eighteen essays by international leading authors devoted to different applications of ground based Doppler radars. Topics covered include, among others, severe weather surveillance, precipitation estimation and nowcasting, wind and turbulence retrievals, ionospheric radar and volcanological applications of Doppler radar. The book is ideally suited for graduate students looking for an introduction to the field or professionals intending to refresh or update their knowledge on Doppler radar applications.
