New South Wales Speed Camera Strategy

Transport for NSW, 2012 The NSW Auditor-General recently completed an audit of speed cameras in NSW that reaffirmed national and international evidence that speed cameras change driver behaviour and have a positive road safety impact, however recommended that an overarching strategy be developed, to ensure that the most appropriate camera type was being used to reduce the road safety risk. Transport for NSW has responded to this audit recommendation and developed an overarching evidence based speed camera strategy for NSW.--Introduction.

International Encyclopedia of Transportation

,2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction; this is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national and international levels. Encyclopedia of Transportation, Seven Volume Set - containing almost 600 articles - brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes, but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new

research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to problems. All-encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world. Provides a forward looking and integrated approach to transportation Updated with future technological impacts, such as self-driving vehicles, cyber-physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach, including sets of comparative studies and applications

Advances in Human Aspects of Transportation:

Part I Neville Stanton, Giuseppe Di Bucchianico, Andrea Vallicelli, Steven Landry, 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research, design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers (understanding of distraction and how to avoid it), environmental concerns, in-vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis, and development. The issues facing engineers, scientists, and other practitioners of

human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries, for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research- it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment, but as embedded issues that can only be understood as a part of an overall system.

The Fast and The Furious: Drivers, Speed Cameras and Control in a Risk Society Helen Wells, 2022-03-26 *The Fast and The Furious: Drivers, Speed Cameras and Control in a Risk Society* presents a sociological and criminological perspective critical to understanding the driver's role at the centre of road safety interventions. Such an approach is, it is argued, as crucial to an understanding of attempts to reduce road crashes, deaths and injuries as approaching such questions from an engineering or educational perspective. The book offers an explanation for the continued debate about one road safety intervention - the speed camera - by situating that debate within contemporary literature about the 'risk society' (Beck, 1992) and more broadly understood experiences of risk faced on a daily basis by drivers. Rather than a focus on risk as something that can be objectively assessed, measured and managed separately from the social context in which it is encountered, it suggests that 'risk' is something that permeates this particular debate from every angle. The book achieves its aims by utilising sociological and criminological perspectives to investigate issues such as: -

the social context in which it is possible for drivers to reject official scientific expertise about crash causation and camera effectiveness - the self-defined 'respectability' of the population being problematised and its juxtaposition with a 'proper' police focus on 'real criminals' - the reconceptualisation of law-breaking as risk-taking rather than inherently 'wrong' behaviour and its consequences for the enforcement of laws based on risk assessment - the experience of being controlled by technology and of receiving what is essentially 'automated justice'. These and other issues are explored and suggested as illuminating of both the real concerns underpinning this debate and potentially instructive for future attempts to control risky behaviour both within and beyond a road safety context.

Traffic and Transport Psychology Geoffrey

Underwood, 2005-06-09 Just as our transport systems become more and more important to our economic and social well-being, so they become more and more crowded and more at risk from congestion, disruption, and collapse. Technology and engineering can provide part of the solution, but the complete solution will need to take account of the behaviour of the users of the transport networks. The role of psychologists in this is to understand how people make decisions about the alternative modes of transport and about the alternative routes to their destinations, to understand how novice and other vulnerable users can develop safe and effective behaviours, how competent users can operate within the transport system optimally and within their perceptual and cognitive limitations. The contributions to this volume address these issues of how the use of our transport systems can be improved by taking into account knowledge of the behaviour of the people who use the systems. Topics discussed include driver training and licensing, driver

impairment, road user attitudes and behaviour, enforcement and behaviour change, driver support systems, and the psychology of mobility and transport mode choice. This work will be of value not only to psychologists but to all transport professionals interested in the application of psychology to traffic.

FHWA Study Tour for Highway Safety Management Practices in Japan, Australia, and New Zealand Joe Georges Bared, 1995

Driving Past Geoff Quayle, 2015-09-01 It's almost impossible to believe that on an average weekend eight people died in road accidents in Victoria in the late 1960s with a low of four and a high of an incredible sixteen. Geoff Quayle joined Commonwealth Department of Shipping and Transport in 1967 determined to play a role in doing something about these stark statistics. This memoir is an insider's account of the organised activity that it took to promote meaningful traffic safety reforms in Australia, weaving personal anecdotes into the historical account. The first steps taken in Australia were to enact strict drink-driving laws and then make seat belt wearing compulsory. However, he cautions against concentrating on ever more restrictive legislative measures to reduce the death toll on the roads that is barely as third of what it was in 1970. Rather, he sees a continuing need to adapt the road and traffic environment to the capabilities, limitations and needs of people rather than the other way around. Quayle argues that the automated enforcement of speed limits that bear

little relationship to the risk of crashing on the safest roads, whilst failing to guide drivers as to what is a safe speed elsewhere, only compounds the problem. As he recalls a career devoted to traffic safety, he reflects on what still needs to be done today, noting that while Australia has come a long way, it would be a dreadful mistake to revisit the blind alleys of the past.

Disaster Management and Human Health Risk VI:
Reducing Risk, Improving Outcomes G.

Passerini,2019-12-04 This volume encompasses latest research presented on the 6th edition of the Disaster Management Conference. The research published in this book is contributed by academics and experts on public health, security and disaster management in order to assess the potential risk from various disasters and discuss ways to prevent or alleviate damage.

Traffic Safety and Human Behavior David Shinar,2017-06-22 This comprehensive 2nd edition covers the key issues that relate human behavior to traffic safety. In particular it covers the increasing roles that pedestrians and cyclists have in the traffic system; the role of infotainment in driver distraction; and the increasing role of driver assistance systems in changing the driver-vehicle interaction.

Improving Road Safety Western Australia. Office of the Auditor General,1996

Eliminating Serious Injury and Death from Road Transport Ian Ronald Johnston,Carlyn Muir,Eric William Howard,2013-12-11 The book explodes the myths that currently drive society's view of traffic safety and limit progress in reducing death and serious injury. It presents current scientific knowledge in a non-technical way and draws parallels with other areas of public safety and public health. It uses examples from the media and from public

policy debates to paint a clear picture of a flawed public policy approach and offers preventive medicine principles to take the field forward.

Globalization in Practice William H. Rupp, 2014-06-26

The concept of globalization has become ubiquitous in social science and in the public consciousness and is often invoked as an explanation for a diverse range of changes to economies, societies, politics and cultures - both as a positive liberating force and as a wholly negative one. Whilst our understanding of the politics, economics, and social resonance of the phenomenon has become increasingly sophisticated at the macro-level, this book argues that globalization too often continues to be depicted as a set of extra-terrestrial forces with no real physical manifestation, except as effects. The essays challenge this dominant understanding of 'globalization from above' through explorations of the mundane means by which globalization has been achieved. Instead of a focus on the meta-political economy of global capitalism, the book concentrates on the everyday life of capitalism, the not-so-'little' things that keep the 'large' forces of globalization ticking over. With its eye on the mundane, the book demonstrates that a series of everyday and, consequently, all but invisible formations critically facilitate and create the conditions under which globalization has flourished. The emphasis is on concrete moments in the history of capitalism when these new means of regular reproduction were invented and deployed. Only by understanding these infrastructures can we understand the dynamics of globalization. In short, punchy essays by distinguished researchers from across a range of disciplines, this book provides a new way of understanding globalization, moving away from the standard accounts of global forces, economic flows, and capitalist dynamics, to show how ordinary

practices and artefacts are crucial elements and symbols of globalization.

Locating and Evaluating Fixed Safety Cameras in South Australia C. N. Kloeden,T. J. Bailey,T. P. Hutchinson,2019

Fixed safety cameras that detect red light running and speeding vehicles are known to be an effective method of controlling driver behaviour and producing road safety benefits. While no definitive best practice for choosing safety camera locations was found in the literature, there are a number of criteria that are frequently used and that make sense: locations with a high number of crashes (particularly injury crashes); locations with a high proportion of speeding vehicles; locations with high traffic volumes; locations with large numbers of unprotected road users (pedestrians and bicyclists); different camera types covering different areas of the road network; and deploying cameras widely throughout the road network. Evaluation of the effects of safety cameras on particular sites and as a whole can be attempted using a number of methodologies: changes in crash numbers before and after installation; changes in vehicle speeds before and after installation; and changes in offence detections from the time of installation onwards. There are limitations with each of these methodologies such that evaluating the effectiveness of an individual safety camera is often not possible. By tracking

many safety camera sites for a long period of time, the effect of the safety cameras can be examined but there will always be other factors that may explain any observed changes. A true experiment could be conducted to determine safety camera effects but it would involve deliberate non-treatment of good candidate sites for many years. This study gives a reasonable set of principles for selecting safety camera sites and evaluating their effectiveness. However, the detailed processes for South Australia will depend on what data is available, the resources and funding that can be applied, and political and other considerations.
