New Algorithms, Architectures and Applications for Reconfigurable Computing Patrick Lysaght,Wolfgang Rosenstiel,2005-12-05 New Algorithms, Architectures and Applications for Reconfigurable Computing consists of a collection of contributions from the authors of some of the best papers from the Field Programmable Logic conference (FPL'03) and the Design and Test Europe conference (DATE'03). In all, seventy-nine authors, from research teams from all over the world, were invited to present their latest research in the extended format permitted by this special volume. The result is a valuable book that is a unique record of the state of the art in

research into field programmable logic and reconfigurable computing. The contributions are organized into twenty-four chapters and are grouped into three main categories: architectures, tools and applications. Within these three broad areas the most strongly represented themes are coarse-grained architectures; dynamically reconfigurable and multi-context architectures; tools for coarse-grained and reconfigurable architectures; networking, security and encryption applications. Field programmable logic and reconfigurable computing are exciting research disciplines that span the traditional boundaries of electronic engineering and computer science. When the skills of both research communities are combined to address the challenges of a single research discipline they serve as a catalyst for innovative research. The work reported in the chapters of this book captures that spirit of that innovation.

Applied Behavior Science in Organizations Ramona A. Houmanfar,Mitch Fryling,Mark P. Alavosius,2021-09-30 Applied Behavior Science in Organizations provides a compelling overview of the history of Organizational Behavior Management (OBM) and the opportunity it presents for designing and managing positive work environments that can in turn have a positive impact on society. The book brings together leading experts from industry and research settings to provide an overview of the historical approaches in Organizational Behavior Management. It begins with an introduction to recognized practices in OBM and the applications of fundamental principles of behavior analysis to a variety of performance problems in organizational settings. The book then highlights how organizational practices and consumers' behavior combine in a complex confluence to meet an organization's goals and satisfy consumer appetites, whilst often unintentionally affecting the wellbeing of organizational members. It argues that the science of behavior has a responsibility to contribute to the safety, health and wellbeing of organizational members, consumers of organizational products, and beyond. Finally, the book recognizes the essential role of organizations in initiating, shaping, and sustaining the development of more nurturing and reinforcing work environments, through discussion of the need for innovation while adapting and responding to growing social upheaval, technological advances, and environmental concerns, alongside crises in the global economy, health, education, and environment. Showcasing emerging work by internationally recognized scholars on the application of behavior science in organizations, the book will be an essential read for all students and professionals of Organizational Behavior Management, as well as those interested in using organizational applications to create new models of management.

Human Performance, Situation Awareness, and Automation Dennis A. Vincenzi,Mustapha Mouloua,Peter A. Hancock,2005-01-06 In 2000, the Conference on Automation joined forces with a partner group on situation awareness (SA). The rising complexity of systems demands that one can be aware of a large range of environmental and task-based stimulation in order to match what is done with what has to be done. Thus, SA and automation-based interaction fall naturally together and this conference is the second embodiment of this union. Moving into the 21st century, further diversification of the applications of automation will continue--for example, the revolution in genetic technology. Given the broad nature of this form of human-machine interaction, it is vital to apply past lessons to map a future for the symbiotic relationship between humans and the artifacts they create. It is as part of this ongoing endeavor that the present volume is offered.

Engineering Psychology and Human Performance Christopher D. Wickens,William S. Helton,Justin G. Hollands,Simon Banbury,2021-09-27 Forming connections between human performance and design, this new edition of Engineering Psychology and Human Performance examines human–machine interaction. The book is organized directly from a psychological perspective of human information processing, and chapters correspond to the flow of information as it is processed by a human being—from the senses, through the brain, to action—rather than from the perspective of system components or engineering design concepts. Upon completing this book, readers will be able to identify how human ability contributes to the design of technology; understand the connections within human information processing and human performance; challenge the way they think about technology's influence on human performance; and show how theoretical advances have been, or might be, applied to improving human–machine interactions. This new edition includes the following key features: A new chapter on research methods Sections on interruption management and distracted driving as cogent examples of applications of engineering psychology theory to societal problems A greatly increased number of references to pandemics, technostress, and misinformation New applications Amplified emphasis on readability and commonsense examples Updated and new references throughout the text This book is ideal for psychology and engineering students, as well as practitioners in engineering psychology, human performance, and human factors. The text is also supplemented by online resources for students and instructors.

Design Automation, Languages, and Simulations Wai-Kai Chen,2003-03-26 As the complexity of electronic systems continues to increase, the micro-electronic industry depends upon automation and simulations to adapt quickly to market changes and new technologies. Compiled from chapters contributed to CRC's best-selling VLSI Handbook, this volume of the Principles and Applications in Engineering series covers a broad rang

E-Commerce and Web Technologies Kurt Bauknecht,Min A Tjoa,Gerald Quirchmayr,2002-08-21 The Third International Conference on E-commerce and Web Technology (EC-Web 2002) was held in conjunction with

the DEXA 02 in Aix-en-Provence, France. This conference, first held in Greenwich, United Kingdom in 2000, is now in its third year and is very well established. As in the two previous years, it served as a forum bringing together researchers from academia and commercial developers from industry to discuss the current state of the art in E-commerce and web technology. Inspirations and new ideas emerged from intensive discussions during formal sessions and social events. Keynote addresses, research presentations, and discussions during the conference helped to further develop the exchange of ideas among the researchers, developers, and practitioners who attended. The conference attracted more than 100 submissions and each paper was reviewed by at least three program committee members. The program committee selected 40 papers for presentation and publication, a task which was not easy due to the high quality of the submitted papers. We would like to express our thanks to our colleagues who helped to put together the technical program: the program committee members and external reviewers for their timely and rigorous reviews of the papers, and the organizing committee for their help in the administrative work and support. We owe special thanks to Gabriela Wagner and Maria Schweikert for always being available when their helping hand was needed.

Workflow and Process Automation Andrzej Cichocki,Helal A. Ansari,Marek Rusinkiewicz,Darrell Woelk,1997-12-31 Based on the results of the study carried out in 1996 to investigate the state of the art of workflow and process technology, MCC initiated the Collaboration Management Infrastructure (CMI) research project to develop innovative agent-based process technology that can support the process requirements of dynamically changing organizations and the requirements of nomadic computing. With a research focus on the flow of interaction among people and software agents representing people, the project deliverables will include a scalable, heterogeneous, ubiquitous and nomadic infrastructure for business processes. The resulting technology is being tested in applications that stress an intensive mobile collaboration among people as part of large, evolving business processes. Workflow and Process Automation: Concepts and Technology provides an overview of the problems and issues related to process and workflow technology, and in particular to definition and analysis of processes and workflows, and execution of their instances. The need for a transactional workflow model is discussed and a spectrum of related transaction models is covered in detail. A plethora of influential projects in workflow and process automation is summarized. The projects are drawn from both academia and industry. The monograph also provides a short overview of the most popular workflow management products, and the state of the workflow industry in general. Workflow and Process Automation: Concepts and Technology offers a road map through the shortcomings of existing solutions of process improvement by people with daily first-hand experience, and is suitable as a secondary text for graduate-level courses on workflow and process automation, and as a reference for practitioners in industry.
