The Memory System Bruce Jacob,Sadagopan Srinivasan,David T. Wang,2009 Introduce the reader to the most important details of the memory system. This book targets both computer scientists and computer engineers in industry and in academia. Roughly speaking, computer scientists are the users of the memory system and computer engineers are the designers of the memory system. Both can benefit tremendously from a basic understanding of how the memory system really works.

Computer Architecture Richard Y. Kain,1989 The first of a two-volume set that is meant to be read from the beginning to the end in order of presentation. The author sets forth an integrated view of uniprocessor computer system design in v.1 and covers both software and hardware features. He discusses several levels of system design, demonstrating the connection between the different levels and examining problems and approaches shared among the levels. Examples are taken from various programming languages and operating systems. Annotation copyrighted by Book News, Inc., Portland, OR

Advanced Computer Performance Modeling and

Simulation Kallol Bagchi,Jean Walrand,George Zobrist,1998-05-13 Addresses the major issues involved in computer design and architectures. Dealing primarily with theory, tools, and techniques as related to advanced computer systems, it provides tutorials and surveys and relates new important research results. Each chapter provides background information, describes and analyzes important work done in the field, and provides important direction to the reader on future work and further readings. The topics covered include hierarchical design schemes, parallel and distributed modeling and simulation, parallel simulation tools and

techniques, theoretical models for formal and performance modeling, and performance evaluation techniques.

Advances in Computational Intelligence, Part II Salvatore Greco, Bernadette Bouchon-Meunier, Giulianella Coletti, Mario Fedrizzi, Benedetto Matarazzo, Ronald R. Yager, 2012-07-20 These four volumes (CCIS 297, 298, 299, 300) constitute the proceedings of the 14th International Conference on Information Processing and Management of Uncertainty in Knowledge-Based Systems, IPMU 2012, held in Catania, Italy, in July 2012. The 258 revised full papers presented together with six invited talks were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on fuzzy machine learning and on-line modeling; computing with words and decision making; soft computing in computer vision; rough sets and complex data analysis: theory and applications; intelligent databases and information system; information fusion systems; philosophical and methodological aspects of soft computing; basic issues in rough sets; 40th anniversary of the measures of fuzziness; SPS11 uncertainty in profiling systems and applications; handling uncertainty with copulas; formal methods to deal with uncertainty of many-valued events; linguistic summarization and description of data; fuzzy implications: theory and applications; sensing and data mining for teaching and learning; theory and applications of intuitionistic fuzzy sets; approximate aspects of data mining and database analytics; fuzzy numbers and their applications; information processing and management of uncertainty in knowledge-based systems; aggregation functions; imprecise probabilities; probabilistic graphical models with imprecision: theory and applications; belief function theory: basics and/or applications; fuzzy uncertainty in economics and business; new trends in De Finetti's approach; fuzzy measures and integrals; multicriteria decision making; uncertainty in privacy and security; uncertainty in the spirit of Pietro Benvenuti; coopetition; game theory; probabilistic approach.

Serverless Network File Systems Michael Donald Dahlin,1995

Abstract: This thesis presents the design of a serverless network file system, a file system that distributes its functionality among cooperating, networked machines to eliminate the central file server bottleneck found in current network file systems. In a serverless system, any machine can cache, store, or control any block of data. This location independence provides better performance and scalability than traditional file system architectures. Further, because any machine in the system can assume the responsibilities of a failed component, the serverless design can also provide higher availability. This dissertation details the design of three serverless subsystems, each of which distributes a specific piece of functionality that a traditional system would implement as part of a central server. I describe and evaluate cooperative caching, a way to coordinate client caches to replace the central server's cache. I evaluate different distributed disk storage architectures and present several improvements on previous log-structured, redundant storage systems. Finally, I present the design of a distributed management architecture that splits the control of the file system among managers while maintaining a seamless single system image. Together, these pieces form a a [sic] serverless file system that eliminates central bottlenecks. I describe the integration of these components in the context of xFS, a prototype serverless file system implementaton. Initial performance measurements illustrate the promise of the serverless approach for providing scalable file systems.

Best Practices for DB2 on AIX 6.1 for POWER Systems

Rakesh Dash,Bernard Goelen,Vasfi Gucer,Rajesh K Jeyapaul,Sunil Kamath,Naveen Kumar Bharatha,Michael Kwok,Anupama Padmanabhan,Punit Shah,Basker Shanmugam,Sweta Singh,Amar Thakkar,Adriana Zubiri,IBM Redbooks,2015-08-27 This IBM® Redbooks® publication presents a best practices guide for DB2® and InfoSphere™ Warehouse performance on a AIX® 6L with Power Systems™ virtualization environment. It covers Power

hardware features such as PowerVMTM, multi-page support, Reliability, Availability, and Serviceability (RAS) and how to best exploit them with DB2 LUW workloads for both transactional and data warehousing systems. The popularity and reach of DB2 and InfoSphere Warehouse has grown in recent years. Enterprises are relying more on these products for their mission-critical transactional and data warehousing workloads. It is critical that these products be supported by an adequately planned infrastructure. This publication offers a reference architecture to build a DB2 solution for transactional and data warehousing workloads using the rich features offered by Power systems. IBM Power Systems have been leading players in the server industry for decades. Power Systems provide great performance while delivering reliability and flexibility to the infrastructure. This book presents a reference architecture to build a DB2 solution for transactional and data warehousing workloads using the rich features offered by Power systems. It aims to demonstrate the benefits DB2 and InfoSphere Warehouse can derive from a Power Systems infrastructure and how Power Systems support these products. The book is intended as a guide for a Power Systems specialist to understand the DB2 and InfoSphere Warehouse environment and for a DB2 and InfoSphere Warehouse specialist to understand the facilities available for Power Systems supporting these products.

Medical Informatics Berlin 1979 B. Barber,F. Gremy,K. Überla,G. Wagner,2012-12-06 The HIB 79 Congress is the second one organized by the European Federation for I-medical Informatics (EFMI). The host society is the Deutsche Gesellschaft für I-medizinische Dokumentation, Informatik und Statistik (GMDS) who are holding their 24th annual meeting at this time. The program of MIB 79 covers every aspect of the application of information science to medicine and public health, and as such represents the state of the art. Medical Informatics (M. I.) is now at a turning point. To date, despite the efforts made by specialists in many countries, the balance sheet of M. I. remains rather poor. One of

the reasons for this situation is the fact that the computers of yesterday were the prerogative of an elite of users. They were expensive, difficult to use, remote from the users, and mainly in the hands of a sacerdotal caste of data processing specialists • In the future, data processing facilities will be cheap, easy to handle, and immediately accessible. Data processing will have a chance of becoming truly democratic thanks to two important and complementary trends in computer technology: 1. a network due to computer communication partnership; 2. miniaturization due to the dramatic expansion of micro-processor and computer technology. IV The combination of these two main hardware achievements for which some neologisms have been invented - communication \ in the USA and telEnnatique in France - will lead to a completely new way of processing data which may be called distributed informatics.
