**The Exploitations of Medieval Romance** Laura Ashe,Ivana Djordjević,Judith Elizabeth Weiss,Ivana Djordjevic,2010 As one of the most important, influential and capacious genres of the middle ages, the romance was exploited for a variety of social and cultural reasons: to celebrate and justify war and conflict, chivalric ideologies, and national, local and regional identities; to rationalize contemporary power structures, and identify the present with the legendary past; to align individual desires and aspirations with social virtues. But the romance in turn exploited available figures of value, appropriating the tropes and strategies of religious and historical writing, and cannibalizing and recreating its own materials for heightened ideological effect. The essays in this volume consider individual romances, groups of writings and the genre more widely, elucidating a variety of exploitative manoeuvres in terms of text, context, and intertext. **Programming Heterogeneous MPSoCs** Jerónimo Castrillón Mazo,Rainer Leupers,2013-09-24 This book provides embedded software developers with techniques for programming

heterogeneous Multi-Processor Systems-on-Chip (MPSoCs), capable of executing multiple applications simultaneously. It describes a set of algorithms and methodologies to narrow the software productivity gap, as well as an in-depth description of the underlying problems and challenges of today's programming practices. The authors present four different tool flows: A parallelism extraction flow for applications written using the C programming language, a mapping and scheduling flow for parallel applications, a special mapping flow for baseband applications in the context of Software Defined Radio (SDR) and a final flow for analyzing multiple applications at design time. The tool flows are evaluated on Virtual Platforms (VPs), which mimic different characteristics of state-of-the-art heterogeneous MPSoCs.
