WHO International Standard Terminologies on Traditional Medicine in the Western Pacific Region, 2007 This book has been prepared in an effort to address the pressing need for a common language, i.e. international standard terminology and technical terms to be used in traditional medicine. The number of commonly used terms in traditional medicine is estimated to be more than 4000, most of which are included in this book, which is designed for use by students and clinical practitioners and researchers in the Western Pacific Region. This terminology will also be useful to assist Member States in the region in developing evidence-based clinical practice guidelines on traditional medicine.

Botanical Medicine in Clinical Practice Ronald Ross Watson, Victor R. Preedy, 2008 The potential benefits of plants and plant extracts in the treatment and possible prevention of many leading health concerns are historically well known and are becoming more widely studied and recognized within the medical community. It is these studies that led to the first compilation of new research developments, identifying new extracts and uses for plants in disease prevention and treatment. This major comprehensive reference work contains contributions from more than 150 clinical and academic experts covering topics such as treatments of cancer and cardiovascular diseases, as well as historical plant use by indigenous people supported by recent scientific studies. Authors review the safety and efficacy of botanical treatments while identifying the sources, historical supportive data and mechanisms of action for emerging treatments. Written by researchers currently carrying out identification and biomedical testing, this is the most up to date text on the latest research from all over the world. It is an essential resource for health care practitioners and herbalists, as well as researcher, students and professionals in botany and alternative medicine.

Functions of Plant Secondary Metabolites and Their Exploitation in Biotechnology Michael Wink, 1999 The book is designed for use by advanced students, researchers and professionals in plant biochemistry, physiology, molecular biology, genetics, pharmacology, medicine, pharmacy and agriculture working in the academic and industrial sectors, including the pesticide and pharmaceutical industries.--Jacket.

Naming the Local Soyoung Suh, 2020-05-11 Naming the Local uncovers how Koreans domesticated foreign medical novelties on their own terms, while simultaneously modifying the Korea-specific expressions of illness and wellness to make them accessible to the wider network of scholars and audiences. Due to Korea's geopolitical position and the intrinsic tension of medicine's efforts to balance the local and the universal, Soyoung Suh argues that Koreans' attempts to officially document indigenous categories in a particular linguistic form required constant negotiation of their own conceptual boundaries against the Chinese, Japanese, and American authorities that had largely shaped the medical knowledge grid. The birth, decline, and afterlife of five terminologies—materia medica, the geography of the medical tradition, the body, medical commodities, and illness—illuminate an irresolvable dualism at the heart of the Korean endeavor to name the indigenous attributes of medicine. By tracing Korean-educated agents' efforts to articulate the vernacular nomenclature of medicine over time, this book examines the limitations and possibilities of creating a mode of "Koreanness" in medicine—and the Korean manifestation of cultural and national identities.

Shang Han Lun Zhang Ji, 2022-07-26 The Shang Han Lun has been a primary treatment theory and practice source for nearly two millennia. Its author, Zhang Zhong Jing, has been named the "Chinese Hippocrates" to highlight the depth and breadth of his contribution to traditional Chinese drug therapy. This edition features the Chinese text, Pinyin transliteration, and an English translation of the entire Song Dynasty text, the content and textual order most used in Asia. Just as in Chinese language editions, it is fully

supplemented with notes and commentaries. The notes describe the clinical symptoms Zhang Zhong Jing associated with the Chinese terms. For example, modern interpretations of a “moderate” pulse often refer to the speed of its beats. The same term, when used in the Shang Han Lun, refers to a pulse that is loose, soft, and harmonious. Such notes provide practitioners with the clinical observations necessary to properly apply the information. The commentaries further enhance the text’s clinical utility by explaining the theoretical and practical foundations behind the lines of text. Because entire bodies of theory and practice can be associated with the terms and expressions used in canonical works like the Shang Han Lun, commentaries have become a standard means of knowledge acquisition for Asian students. The commentaries in this edition serve exactly the same purpose, greatly enhancing its utility. The introductory matter explains the background of the text, the conceptual structure of its contents, and the problems of exegesis. The appendices are designed to assist those studying Chinese and the glossary and the full Pinyin-English index make this an easily accessed reference.

Data Mining for Social Network Data Nasrullah Memon, Jennifer Jie Xu, David L. Essentials of Chinese Medicine Zhanwen Liu, 2011-03-08 The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government’s university funding authority to develop a School of Chinese Medicine to prepare students who will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.

Standard Acupuncture Nomenclature ,1993 Now in its second edition, Standard Acupuncture Nomenclature has been extensively revised following a number of consultations with experts representing all the major traditions of acupuncture. The nomenclature covers the 361 classical acupuncture points organized according to the fourteen meridians. Each entry gives the standardized name of the point in its three elements: an alphanumeric code derived from the English language translation of the meridian name the Chinese phonetic alphabet (Pinyin) name, and the Han (Chinese) character. The original form of the writing is shown first followed by a simplified form of the character. Each entry also provides a brief comment on the point explaining the meaning of the Han character and the significance of the point's location. Use of the nomenclature is facilitated by the inclusion of two indexes. The first lists the equivalent names and code names of the acupuncture points as used in English French Japanese Korean and Vietnamese. The second lists the Han characters for the 361 points.

Histopathology of Preclinical Toxicity Studies Peter Greaves,1990
Histopathological assessment of tissue sections is an important component of many preclinical studies which are conducted to support the safety and clinical development of novel therapeutic agents for use in the treatment of human diseases. The drug discovery process, aided by modern biotechnology, is now capable of generating highly potent, pharmacologically active agents which can give rise to quite unusual constellations of tissue pathology. The complexity and the number of histopathological findings in individual studies indicate the need for lucidity in descriptions and conclusions. In the light of these and other difficulties, this text is aimed towards bringing together into one volume a description of histopathological changes which relate to toxicity testing of therapeutic agents in the usual test species: rat, mouse, dog and non-human primate. This book is an excellent starting point for the analysis of drug-induced findings in toxicity studies.

Network Pharmacology Shao Li,2021-09-29 This book introduces “network pharmacology” as an emerging frontier subject of systematic drug research in the era of artificial intelligence and big data. Network Pharmacology is an original subject of fusion system biology, bioinformatics, network science and other related disciplines. It emphasizes on starting from the overall perspective of the system level and biological networks, the analysis of the laws of molecular association between drugs and their treatment objects, reveals the systematic pharmacological mechanisms of drugs, and guides the research and development of new drugs and clinical diagnosis and treatment. After it was proposed, network pharmacology has been paid attention by researchers, and it has been rapidly developed and widely used. In order to systematically reveal the biological basis of diagnosis and treatment in traditional Chinese medicine and modern medicine, we proposed a new concept of network target for the first time, which has become the core theory of network pharmacology. The core principle of a network target is to construct a biological network that can be used to decipher complex diseases. The network is then used as the therapeutic target, to which multicomponent remedies are applied. This book mainly includes four parts: 1) The concept and theory of network pharmacology; 2) Common analysis methods, databases and software in network pharmacological research; 3) Typical cases of traditional Chinese medicine modernization and modern drug research based on network pharmacology; 4) Network pharmacology practice process based on drugs and diseases.

A Proposed Standard International Acupuncture Nomenclature WHO Scientific Group on International Acupuncture Nomenclature,1991-01-01 With the unprecedented expansion of interest in acupuncture around the world, the need for a standard international nomenclature has become increasingly apparent. Practitioners and researchers every-where must speak a common language as they attempt to ascertain the clinical benefits of acupuncture and elucidate the underlying physiological mechanisms. This report records the consensus

reached by a Who Scientific Group on a standard international acupuncture nomenclature which met in Geneva from 30 October to 3 November 1989. Building on the proposals of expert meetings organized by the Who Regional Office for the Western Pacific since 1981, the Scientific Group agreed that the standard international nomenclature should comprise an alphanumeric code as well as the Han character names of meridians and acupuncture points, along with their transliterations into the Chinese phonetic alphabet (Pinyin) and their English translations. The experts went on to propose standard nomenclature for the 14 main meridians, the 361 classical acupuncture points, the 8 extra meridians and the 48 extra points, and for scalp acupuncture lines.

Data Analytics for Traditional Chinese Medicine Research Josiah Poon, Simon K. Poon, 2014-02-19 This contributed volume explores how data mining, machine learning, and similar statistical techniques can analyze the types of problems arising from Traditional Chinese Medicine (TCM) research. The book focuses on the study of clinical data and the analysis of herbal data. Challenges addressed include diagnosis, prescription analysis, ingredient discoveries, network based mechanism deciphering, pattern-activity relationships, and medical informatics. Each author demonstrates how they made use of machine learning, data mining, statistics and other analytic techniques to resolve their research challenges, how successful if these techniques were applied, any insight noted and how these insights define the most appropriate future work to be carried out. Readers are given an opportunity to understand the complexity of diagnosis and treatment decision, the difficulty of modeling of efficacy in terms of herbs, the identification of constituent compounds in an herb, the relationship between these compounds and biological outcome so that evidence-based predictions can be made. Drawing on a wide range of experienced contributors, Data Analytics for Traditional Chinese Medicine Research is a valuable reference for professionals and researchers working in health informatics and data mining. The techniques are also useful for biostatisticians and health practitioners interested in traditional medicine and data analytics.
