BARBAROSSA: Renaissance Corsairs Deniz Uzunoğlu, 2023-06-01 Judaism was exiled from Spain; Islam was getting more powerful in the east, Christianity in the west that, after a thousand years of darkness it was plunged in, began to seek its truth. And the Ark of the Covenant (for some mysterious reason) chose to reappear during these troubled times after being lost for centuries following the destruction of the Temple of Solomon. In her novel, Deniz Uzunoğlu builds around the turbulent times of the Renaissance. Deniz tells the stories of two childhood friends who had fallen in love with the same woman and eventually came sword-to-sword against each other during the 15th-16th century Mediterranean in a never-ending fight culminating at the Battle of Preveza. On the one side, there is Khidr Khairreddin Barbarossa, who started life trading with a small vessel, became the Lord of the Barbary Coast, founded Algiers, and eventually rose to the rank of the Ottoman Imperial Admiral. On the other side, Andrea Doria, the famous Admiral of the Holy League, the Crusaders. Wanting to learn more about the era after the Spanish Monarchs Isabel and Fernando completed Reconquista in an effort to unite all their subjects under the wings of Christianity, William Shakespeare came from Britain to Spain to visit Miguel Cervantes Saavedra, author of the legendary novel Don Quixote. Cervantes had fought against the Turks at the Battle of Lepanto, was wounded on his left hand, and spent five years in captivity in the baths of Algiers before finally being ransomed from the Turks and returned to his homeland. The period Cervantes told Shakespeare about was when world-renowned historical figures such as Leonardo da Vinci, Christopher Columbus, Piri Reis, Dragut Reis, and Niccolo Machiavelli lived. The sultans of the Ottoman Empire, Selim the Stern and Suleiman the Magnificent dominated the east, with their eyes set on Rome, and the Knights of Saint John, settled in the island of Rhodes, were striking fear into the hearts of people trading in the Mediterranean. BARBAROSSA: Renaissance Corsairs presents in a fluent style the struggles between the warriors of the time, notorious for their competence and valor, during a period when empires fought the bloodiest land and sea battles in history. Political maneuverings of the world's most extraordinary emperors were striving to expand the borders of their imperial territories, and an epic love that blossomed in the hearts of both of these men for the same woman in this fiery atmosphere, inviting the reader to embark on a breathtaking adventure.

Android at Arms Andre Norton, 2015-12-01 When Andas Kastor awakens in an alien land, he must figure out if he's the true emperor of his home world or an evil double. In a stark, arid wasteland, a man awakens from a frozen state. As he stares out his narrow slit of a window, he has no memory of how he got there—or why. All he knows is his name: Andas Kastor, Imperial Prince of Inyanga. But instead of the luxurious trappings of his royal palace, he's in a hellish, storm-lashed place punctuated by howling winds and shattering streaks of lightning. And he's not alone. In this uninhabited world, he meets five other survivors, also of noble birth. They include the scaled, emerald-haired Elys of Posedonia and clawed, fanged Lord Yolyos of Sargol. They all speak the same Basic language, as befits those from neighboring spheres. Were they abducted, spirited to this alien planet, and held in mind-lock while evil doppelgangers ruled in their places? After a daring escape, Andas returns to Inyanga—only to discover that decades have passed and another sits on his throne. Now, hunted across barriers of time, Andas must fight external and internal enemies to save his civilization and uncover the truth about his identity.

Multi-access Edge Computing: Software Development at the Network Edge Dario Sabella, 2021-08-21 The textbook covers the main aspects of Edge Computing, from a thorough look at the technology to the standards and industry associations working in the field. The book is conceived as a textbook for graduate students but also functions as a working guide for developers, engineers, and researchers. The book aims not only at providing a comprehensive technology and standard reference overview for students, but also useful research insights and practical exercises for edge software developers and investigators in the area (and for students looking to apply their skills). A particular emphasis is given Multi-access Edge Computing (MEC) as defined in European Telecommunications Standards Institute (ETSI), in relationship with other standard organizations like

3GPP, thus in alignment with the recent industry efforts to produce harmonized standards for edge computing leveraging both ETSI ISG MEC and 3GPP specifications. Practical examples of Edge Computing implementation from industry groups, associations, companies and edge developers, complete the book and make it useful for students entering the field. The book includes exercises, examples, and quizzes throughout.

The Android Myth Keith Chandler, 2002 *The Android Myth* is a broadside against the notion that computers can acquire artificial intelligence and be able to think as humans do, even perhaps replacing humans one day. Instead of advancing his argument on purely technical grounds, the author takes the unusual approach of analyzing the evidence from paleoanthropology, archaeology and history to elucidate how humans learned to think. He then asks and answers the basic question of whether computers ever duplicate the kind of thought that the evolution of our species has suited us for. Keith Chandler describes himself as an intellectual nomad, moving from subject to subject and pitching his tent wherever there seems to be a philosophical problem that has defied solution by conventional thinkers. However, while the subjects of his published works differ widely, they are united by his fidelity to the fundamental philosophy he calls Mental Realism.

RISE OF THE HUMAN ANDROIDS Malcolm P. Chester, 2014 In this sequel to the *Rise of the Human Androids*, lizard like aliens called the Sharptors have perfected high-energy shields for hyperspace travel and begun exploring the galaxy. Meanwhile, James decides to not run for re-election for President of Mars. He plans instead to search the galaxy for old ones technology in a heavy cruiser with a supergun named after his wife. His wife and two children will join him on this journey. Susan, Mars' Secretary of State and former President of the U.S. will run for James' spot and James' adopted human android daughter Martha will run for vice-president. James' actions are motivated by the re-emergence of Ergone as the Marshall of the powerful and independent Altararian military. James knows Ergone wants to avenge his loss to Mars and Earth in their last war. James fears the Altararians with their vastly superior forces will crush Mars if he can't find advanced technology to stop them. In a chance meeting, James encounters the Sharptors while looking at a promising planet for exploration. A fight breaks out. James wins the encounter but the Sharptor warship escapes. Still, a plan begins to emerge in James' mind of how to use the aggressive new aliens against the Altararians. Meanwhile James and his associates explore an old ones site on their promising new earth like world Sisney 1. They must battle a super aggressive mammal the Ratang and insect the Botos, which have stripped Sisney 1 of almost all of its land animal life as they explore the site. They find new technology at the site, which they plan to use against the Altararians. Meanwhile a secret organization called the Committee, which has controlled many economic events on Earth, finds it difficult to control Mars and its allied planets. As a result, to make themselves relevant in the changing world around them, they join with bigoted groups on Mars and Ganymede and in a secret deal with the Altararians to sabotage Mars efforts to arm itself against the expected Altararian invasion. Many characters on Earth, Mars and Ganymede battle this super secret group in their efforts to prepare Mars for the Altararian invasion. All these forces clash as Mars struggles to survive its confrontation with the Altararians and preserve its Utopian World of human androids and human immigrants.

Robots, Cyborgs, and Androids Jason Porterfield,2018-07-15 People have long dreamed of creating machines that can carry out the same tasks as people. These dreams have led to the creation of many sci-fi books, movies, and shows that attempt to depict how people would live with robots, cyborgs, and androids. This compelling book traces the history of robotics as a science, while describing in vivid detail some of the most influential works in all of science fiction, including those by E. T. A. Hoffmann, Fritz Lang, Eando Binder, and Isaac Asimov. Readers will ponder intriguing

questions about the ethics of how robots, cyborgs, and androids are used and treated.

Edge Intelligence Javid Taheri, Schahram Dustdar, Albert Zomaya, Shuiguang Deng, 2023-06-14 This graduate-level textbook is ideally suited for lecturing the most relevant topics of Edge Computing and its ties to Artificial Intelligence (AI) and Machine Learning (ML) approaches. It starts from basics and gradually advances, step-by-step, to ways AI/ML concepts can help or benefit from Edge Computing platforms. The book is structured into seven chapters; each comes with its own dedicated set of teaching materials (practical skills, demonstration videos, questions, lab assignments, etc.). Chapter 1 opens the book and comprehensively introduces the concept of distributed computing continuum systems that led to the creation of Edge Computing. Chapter 2 motivates the use of container technologies and how they are used to implement programmable edge computing platforms. Chapter 3 introduces ways to employ AI/ML approaches to optimize service lifecycles at the edge. Chapter 4 goes deeper in the use of AI/ML and introduces ways to optimize spreading computational tasks along edge computing platforms. Chapter 5 introduces AI/ML pipelines to efficiently process generated data on the edge. Chapter 6 introduces ways to implement AI/ML systems on the edge and ways to deal with their training and inferencing procedures considering the limited resources available at the edge-nodes. Chapter 7 motivates the creation of a new orchestrator independent object model to descriptive objects (nodes, applications, etc.) and requirements (SLAs) for underlying edge platforms. To provide hands-on experience to students and step-by-step improve their technical capabilities, seven sets of Tutorials-and-Labs (TaLs) are also designed. Codes and Instructions for each TaL is provided on the book website, and accompanied by videos to facilitate their learning process.
