Fire Hazard Assessment of Lithium Ion Battery Energy Storage Systems

Andrew F. Blum, R. Thomas Long Jr., 2016-08-06 Providing a concise overview of lithium-ion (Li-ion) battery energy storage systems (ESSs), this book also presents the full-scale fire testing of 100 kilowatt hour (kWh) Li-ion battery ESSs. It details a full-scale fire testing plan to perform an assessment of Li-ion battery ESS fire hazards, developed after a thorough technical study. It documents the results of the testing plan including external and internal ignition testing, ESS positioning, temperature and heat flux measurements, pressure measurement, weather meters, and data acquisition systems. A comprehensive literature review and gap analysis reveal the current state of research into this vital aspect of energy storage. The authors cover the characteristics and hazards of Li-ion batteries, their anatomy and design, commercial and residential ESSs, historical fire incidents, and ESS codes and regulations. Researchers and professionals working in fire protection engineering, battery systems engineering, or energy storage will find this book a useful example of a fire testing plan. The results of the hazard assessment offer insights for those involved in electrical, fire, and building codes, as well as practitioners in design standards and fire testing.

Used Battery Collection and Recycling G. Pistoia, J.-P. Wiaux, S.P.

Wolsky, 2001-11-08 This book covers all aspects of spent battery collection and recycling. First of all, the legislative and regulatory updates are addressed and the main institutions and programs worldwide are mentioned. An overview of the existing battery systems, of the chemicals used in them and their hazardous properties is made, followed by a survey of the major industrial recycling processes. The safety and efficiency of such processes are stressed. Particular consideration is given to the released emissions, i.e. to the impact on human health and the environment. Methods for the evaluation of this impact are described. Several chapters deal with specific battery chemistries: lead-acid, nickel-cadmium and nickel-metal hydride, zinc (carbon and alkaline), lithium and lithium-ion. For each type of battery, details are provided on the collection/recycling process from the technical, economic and environmental viewpoint. The chemicals recoverable from each process and remarketable are mentioned. A chapter deals with recovering of the large batteries powering electric vehicles, e.g. lead-acid, nickel-metal hydride and lithium-ion. The final chapter is devoted to the important topic of collecting batteries from used electrical and electronic equipment. The uncontrolled disposal of these devices still

containing their batteries contributes to environmental pollution.
