Extend Your Battery Life (PCWorld Superguides) , From the Editors of PCWorld, discover how to Extend Your Battery Life. Few things in life are as frustrating as running out of juice at the most inopportune times. You need to make an important call just as your phone's screen goes dark. You have to finish an important document just as your laptop's battery runs out. You have your camera poised to snap the perfect shot but when you press the shutter, nothing happens. The tips range from the obvious (dim your phone and laptop screens, turn off Wi-Fi when you don't need it) to the unexpected (choose a dark-colored wallpaper for your phone, tweak the screen timeout). Other sections recommend handy apps and accessories for your smartphone and laptop.

Battery Life Brennan Gilpatrick,Gregory Lang,2023-05-30 Equal parts Z for Zachariah and Mad Max, Gilpatrick and Lang’s darkly funny debut follows a girl from outer space and an aging scavenger who must learn to trust each other in order to survive. Welcome to the Junkyard, a toxic wasteland where humans, machines, and everything in between fight for survival among the ruins of a long-forgotten war. This is where Diane Three-One-Seven finds herself after the arkship Cradle—the only home she’s ever known—falls out of the sky. When a mysterious scavenger named Virgil stumbles upon Diane’s escape pod, the two strike a deal (if it can be called that). Virgil’s spare mechanical battle suit, nicknamed the “Grave Walker,” can help Diane survive the ruined atmosphere—but it could kill her if it runs out of power. And Diane’s untainted blood, a precious resource in this radioactive hellscape, could keep Virgil alive long enough to finish one last mission—but at what cost? The two will have to wait to work out their differences, however, as a new threat appears on the horizon: a masked man called the Messenger, who hopes to subdue the Junkyard with a mysterious new power. With the help of a ragtag team of misfits, Diane and Virgil may just have a chance to stop him—if they don’t kill each other first.

Cellular Internet of Things Olof Liberg,Marten Sundberg,Eric Wang,Johan Bergman,Joachim Sachs,2017-09-15 Cellular Internet of Things: Technologies, Standards and Performance gives insight into the recent work performed by the 3rd Generation Partnership Project (3GPP) to develop systems for the Cellular Internet of Things. It presents both the design of the new Narrowband Internet of Things (NB-IoT) technology and how GSM and LTE have evolved to provide Cellular Internet of Things services. The criteria used for the design and objectives of the standardization work are explained, and the technical details and performance of each technology is presented. This book discusses the overall competitive landscape for providing wireless connectivity, also introducing the most promising technologies in the market. Users will learn how cellular systems work and how they can be designed to cater to challenging new requirements that are emerging in the telecom industry, what the physical layers and procedures in idle and connected mode look like in EC-GSM-IoT, LTE-M, and NB-IoT, and what the expected performance of these new systems is in terms of expected coverage, battery lifetime, data throughput, access delay time and device cost. Provides a detailed introduction to the EC-GSM-IoT, LTE-M and NB-IoT technologies Presents network performance of the 3GPP cellular technologies, along with an analysis of the performance of non-cellular alternatives operating in unlicensed spectrum Includes prediction of true performance levels using state-of-the-art simulation models developed in the 3GPP standardization process

Green Heterogeneous Wireless Networks Muhammad Ismail,Muhammad Zeeshan Shakir,Khalid A. Qaraqe,Erchin Serpedin,2016-08-12 This book focuses on the emerging research topic green (energy efficient) wireless networks which has drawn huge attention recently from both academia and industry. This topic is highly motivated due to important environmental, financial, and quality-of-experience (QoE) considerations. Specifically, the high energy consumption of the wireless networks manifests in approximately 2% of all

CO2 emissions worldwide. This book presents the authors' visions and solutions for deployment of energy efficient (green) heterogeneous wireless communication networks. The book consists of three major parts. The first part provides an introduction to the green networks concept, the second part targets the green multi-homing resource allocation problem, and the third chapter presents a novel deployment of device-to-device (D2D) communications and its successful integration in Heterogeneous Networks (HetNets). The book is novel in that it specifically targets green networking in a heterogeneous wireless medium, which represents the current and future wireless communication medium faced by the existing and next generation communication networks. The book focuses on multi-homing resource allocation, exploiting network cooperation, and integrating different and new network technologies (radio frequency and VLC), expanding the network coverage and integrating new device centric communication paradigms such as D2D Communications. Whilst the book discusses a significant research topic supported with advanced mathematical analysis, the resulting algorithms and solutions are explained and summarized in a way that is easy to follow and grasp. This book is suitable for networking and telecommunications engineers, researchers in industry and academia, as well as students and instructors.

Battery Life Brennan Gilpatrick,Gregory Lang,2024-02-27

Battery Life Clariluz Graham,2021-06 You are a portable battery designed to empower the world around you. They say a pinch of salt is all you need to drastically improve a battery's performance. Through scripture we hear that we are light and salt to the world. This is the greatest mystery with the greatest symmetry that we are called to be both salt and light depending on the season we are in. A battery converts chemical energy to electrical energy resulting in visible light as salt can improve the battery's function to produce light. The takeaway is that we were created with all components needed to live remarkable lives. Our truest power comes from within. Through life's many unfortunate experiences, the subtleties of unforgiveness, doubt, and bitterness, creep in, erode our internal battery, and cause us to live subpar and unrewarding lifestyles. This book will help you navigate and identify the desolate areas that need addressing. It will help you target and expose the root of your fear's and limitations by first identifying who you are in God, a battery fully powered to charge the world around you. Understand what is weakening the charge within your internal battery (life force) in order to function at peak condition and fulfil your God ordained purpose. Become fully equipped to energize and conquer the person within and watch the impossible become possible. Learn the different ways to power up when your supply of charge is low and how to tap into God's wellspring of power to recalibrate and recharge your battery. This book will become your secret weapon, a spear that will penetrate the most untraceable fragments within you that need healing while supercharging your faith, hope, and understanding.

Power-Aware Computer Systems Babak Falsafi,T. N. Vijaykumar,2004-12-07 Welcome to the proceedings of the 3rd Power-Aware Computer Systems (PACS 2003) Workshop held in conjunction with the 36th Annual International Symposium on Microarchitecture (MICRO-36). The increase in power and - ergy dissipation in computer systems has begun to limit performance and has also resulted in higher cost and lower reliability. The increase also implies - ducedbatterylifeinportablesystems.Becauseofthemagnitudeoftheproblem, alllevelsofcomputersystems,includingcircuits,architectures,andsoftware,are being employed to address power and energy issues. PACS 2003 was the third workshop in its series to explore power- and energy-awareness at all levels of computer systems and brought together experts from academia and industry. These proceedings include 14 research papers, selected from 43 submissions, spanningawidespectrumofareasinpower-awaresystems.Wehavegrouped the papers into the following categories: (1) compilers, (2) embedded systems, (3) microarchitectures, and (4) cache and memory systems. The ?rst paper on compiler techniques proposes pointer reuse analysis that is biased by runtime information (i.e., the targets of pointers are determined based on the likelihood of their occurrence at runtime) to map accesses to ener- e?cient memory access paths (e.g., avoid tag match). Another paper proposes compiling multiple programs together so that disk accesses across the programs can be synchronized to achieve longer sleep times in disks than if the programs are optimized separately.
