Waldemar Góralski

**The Battleship USS Arizona** Waldemar Goralski, Leszek Wieliczko, 2013-10-01 USS Arizona was a Pennsylvania-class battleship built for and by the United States Navy in the mid-1910s. Named in honor of the 48th state's recent admission into the union, the ship was the second and last of the Pennsylvania class of super-dreadnought battleships. Although commissioned in 1916, the ship remained stateside during World War I. Shortly after the end of the war, Arizona was one of a number of American ships that briefly escorted President Woodrow Wilson to the Paris Peace Conference. The ship was sent to Turkey in 1919 at the beginning of the Greco-Turkish War to represent American interests for several months. Several years later, she was transferred to the Pacific Fleet and remained there for the rest of her career.

**The Battleship Scharnhorst** Grzegorz Nowak, 2011-03 A new second edition of the book including excellent 3D objects as well as anglyph glasses which allow you admire this ship in 3D The notorious battleship Scharnhorst, named after the Prussian General and army reformer Gerhard von Scharnhorst, was a thorn in the Allies side, sinking numerous ships and severely threatening British seaborne supply lines. The lead in her class and weighing in at 31,100 ton the Scharnhorst terrorized Allied merchant ships in the Atlantic shipping lanes for four years, before finally being sunk by HMS Norfolk in the Battle of the North Cape in 1943. About the Series This brand-new series focuses on the construction of famous ships - battleships, carriers, cruisers, and submarines. With ground-breaking 3D imagery, each corner, angle, and dimension of the ship is viewable. With various close-up views, and each 3D image based on actual technical scale drawings and photographs, this makes an exceptional reference tool. Information on the design, development and combat history of each vessel is also included, as well as numerous photographs and 1/350th scale drawings.

**The Battleship USS Massachusetts** Stefan Draminski, 2014-04-19 The text part of this book describes history of the ship's construction and service. This is accompanied by more than 100 color illustrations showing USS Massachusetts' appearance towards the end of her service in the Pacific, 1945. Elements that are shown in detail include superstructures, armament, fire control instruments, aircraft, boats, equipment, rig, etc. Blueprints in 1:350, 1:200, 1:100 and 1:50 scales (general views and details) are included on a separate sheet. The publication is a great reference for building a detailed model of USS Massachusetts.

**The Battleship USS Missouri** Stefan Draminski, 2014-07-19 The text part of this book describes history of the ship's construction and service. This is accompanied by more than 100 color illustrations

showing USS Missouri's (BB-63) appearance on 2 September 1945, when Japanese officials signed formal surrender on her board. Elements that are shown in detail include superstructures, armament, fire control instruments, aircraft, boats, equipment, rig, surrender deck fittings etc. Blueprints in 1:350, 1:200, 1:100 and 1:50 scales (general views and details) are included on a separate sheet. The publication is a great reference for building a detailed model of USS Missouri.

**The Battleship USS North Carolina** Stefan Draminski, 2015-05-19 Launched in 1940, North Carolina was the first U.S. newly built battleship to have taken part in the war in the Pacific. During her busy combat career she demonstrated that battleships could perform very well indeed in their new role as escorts for fleet aircraft carriers and weapon platforms providing fire support for ground troops. Having earned no fewer than 15 Battle Stars during her wartime service, North Carolina was the most highly decorated US Navy battleship of World War II. After decommissioning, she escaped the chopping block and is preserved to this day as a floating museum

The Battleship Richelieu Andrzej Sobucki, Mirosław Skwiot, 2013-02-28 The Richelieu was a French battleship, and the lead ship of her class. She was the first French 35,000-ton battleship, designed to counter the Italian Littorio class battleships, the first modern battleships built since the 1922 Treaty of Washington. Ordered in 1935, she was a scaled-up version of the Dunkerque class battleships, featuring a main armament of eight 380 mm guns in two quadruple turrets in forward super firing positions. Her armor and underwater protection were equal to her contemporaries, except the Japanese Yamato class battleships. Her speed was surpassed only by the fastest U.S. Navy battleships. About the Series This brand-new series focuses on the construction of famous ships - battleships, carriers, cruisers, and submarines. With groundbreaking 3D imagery, each corner, angle, and dimension of the ship is viewable. **The Battleship USS Iowa** Stefan Draminski, 2020-01-23 USS Iowa (BB-61) was the lead ship in one of the most famous classes of battleships ever commissioned into the US Navy. Transferred to the Pacific Fleet in 1944, the Iowa first fired her guns in anger in the Marshall Islands campaign, and sunk her first enemy ship, the Katori. The Iowa went on to serve across a number of pivotal Pacific War campaigns, including at the battles of the Philippine Sea and Leyte Gulf. The ship ended the war spending several months bombarding the Japanese Home Islands before the surrender in August

1945. After taking part in the Korea War, the Iowa was decommissioned in 1958, before being briefly reactivated in the 1980s as part of President Reagan's 600-Ship Navy Plan. After being decommissioned a second and final time in 1990, the Iowa is now a museum ship in Los Angeles. This new addition to the Anatomy of the Ship series is illustrated with contemporary photographs, scaled plans of the ship and hundreds of superb 3D illustrations which bring every detail of this historic battleship to life.

Battlecruiser Miroslaw Skwiot, 2013-01-19 Haruna, named after Mount Haruna, was a warship of the Imperial Japanese Navy during World War I and World War II. Designed by the British naval engineer George Thurston, she was the fourth and last battlecruiser of the Kongo class, among the most heavily armed ships in any navy when built.

**The Japanese Battleship Fuso** Dmitry Mironov, 2017-03-19 The Battleship Fuso was laid down at Kure on 11 March 1912, launched on 28 March 1914, and joined the Navy on 8 November 1915. He was the second battleship bearing the name Fuso and he participated in the Sino-Japanese and Russo-Japanese war. The battleship Fuso was enrolled in the 1st division of the linear ships of the First fleet. Japan at this time was involved in the First World War, but the ship was tested and trained for combat in peacetime. The first long-range voyage of the new battleship was in Chinese waters in April 1917.

The Battleship Tirpitz Stefan Draminski, 2017-02-28 In the autumn of 1938 the design team of the Bayerische Flugzeugwerke in Augsburg began work on a development version of the Messerschmitt Bf 109 E, which at that time was entering service as the primary fighter of the German Luftwaffe. Prof. Willy Messerschmitt, the company's founder, and Robert Lusser, chief of project planning, sought to develop an improved version of the aircraft which could outperform earlier variants by means of an aerodynamically refined airframe and a more powerful engine. The new fighter, designated Bf 109 F, was to be powered by the Daimler-Benz DB 601 E engine, a development version of its successful

predecessor, the DB 601 A, used on the Bf 109 E. The new DB 601 E was an inline engine with direct fuel injection to the cylinders. Displacement was 3390 cm<sup>3</sup> and maximum output at 17,750 ft (4,800 m) was 1,350 horsepower. This was a remarkable 23% increase in power. The new engine was longer by 17.2 inches (452 mm), which necessitated a major redesign of the engine bearers and cowling. The 'Friedrich' (German phonetic name for the letter 'F') also incorporated a propeller spinner similar to that designed for the Me 209

**The Battleship Vittorio Veneto** Carlo Cestra,2017-03-19 Battleship Vittorio Veneto was one of three Italian Littorio class battleships operating in the Second World War. She was one of the most modern and powerful battleships of her times. She was designed by General Umberto Pugliese and engineer Francesco Mazzullo., and she was the first battleship to exceed the limit of 35,000 tons of displacement imposed in the Washington Naval Treaty. The keel of the Vittorio Veneto battleship was laid down by the Italian shipbuilder Cantieri Riuniti dell'Adriatico in Trieste on 28th October 1934. She was launched in July 1937 and began her service in the Italian Fleet (Regia Marina) by August 1940. She was named in honor of the Italian victory at Vittorio Veneto in the First World War and she had three sister ships: Littorio, Roma, and Impero (the last one was never completed). She was armed with a main battery of nine 38- millimeter guns and three triple turrets. She was able to reach a speed of 30 knots (56 Km/h).

**The Japanese Battleship Kirishima 1940** Waldemar Goralski,2019-12-27 The Brandenburg class battleships were the first blue water warships of the Kaiserliche Marine and can be categorized as the first German pre-dreadnought ships.

*The Japanese Battleship Ise* Carlo Cestra,2018-01-23 Ise (whose name comes from an ancient Japanese province on Honshu, now part of Mie Prefecture) was the lead ship of the two-vessel Ise-class battleships of the Imperial Japanese Navy, which saw combat service during the Pacific War. Ise was laid down as battleship 5 at the Kawasaki Heavy Industries shipyard in Kobe on 10 May 1915, launched on 12 November 1916, completed on 15 December 1917, and assigned to the Kure Naval District. Completed too late for service in World War I, Ise patrolled off the Siberian coast and in northern waters in support of Japan's Siberian Intervention against the Bolshevik Red Army. From the mid-1920s through the late 1930s, Ise patrolled mostly off of the China coast. On 12 April 1922, she hosted a delegation which included Prince of Wales, the future King Edward VIII of the United Kingdom, and the future Lord Mountbatten. Ise-class battleships were fascinating ships and their story began in 1906 with the completion of HMS Dreadnought. The appearance of the all-big-gun turbine-

powered Dreadnought rendered all existing battleships obsolete overnight, and in response the rest of the world's navies initiated massive construction programs. The world's major navies had gained an insurmountable lead in the number of dreadnoughts in service or under construction. Recognizing the futility of trying to compete in sheer numbers, the Japanese Navy adopted a quality before quantity approach, building fewer ships each of much greater capability than foreign designs. In 1911 the Japanese government passed the Emergency Naval Expansion bill which authorized the building of four battlecruisers and one battleship. The battleship was to be designed and built in Japan; this ship became the Fuso. There were a number of foreign designs to take into consideration when it came time to decide the main armament for the new ships. Britain Royal Navy's Orion class was armed with the 13.5 in. gun; the US Wyoming class with 12-12 in. guns; and the succeeding New York class with 10-14 in. weapons. Japan decided to leap over the competition and fit the new ships with the 14 in. gun so Fuso-class would carry 12-14 in. weapons. Armament was not the only area where the Japanese battleship was intended to be superior to foreign designs: it was also to be at least 2 knots faster. Fuso was laid down on 11 March 1912 and she was the first battleship built in Japan using Japanese manufactured materials and weapons. Three sister ships were authorized, one of them laid down in November 1913, but financial difficulties prevented the laying down of the next two ships until 1915, which allowed time for some design improvements. The forecastle deck was shortened, the amidships turrets were grouped together and placed aft of the second funnel and the hull length was increased by 10 ft. to give more machinery space. The changes resulted in the two ships becoming known as the Improved Fuso or Ise class.

The Japanese Battleship Hyuga Waldemar Góralski, 2019-08-25 The Japanese Navy ordered two new battleships in 1912. They were an improved version of Fuso type battleships. Their construction was included in the equipment plan 8-4 of the fleet (8 battleships and 4 heavy cruisers), which was approved by the government and parliament. The amount of money allocated totaled 80 million yen. Design work began in 1913 and all funds for the start of work were collected by July 1914. On May 6, 1915, at the Mitsubishi group shipyard in Nagasaki, a keel for the new battleship was laid. On January 27, 1917, the ship was launched receiving the name Hyuga (after the name of the province). On November 1, 1917, Commander Eitaro Shimodairo became the first captain of the battleship. The Hyuga battleship project was based on the design of the Fuso battleship. Some changes were made to it. The hull was extended by 3 meters, and the armor of the ship's magazines and the central

command post were changed. The layout of guns 1 and 2 was changed, which allowed placing the boiler room closer to the bow and fitting the funnels closer to each other. It also allowed putting artillery guns 3 and 4 behind the boiler room. It was not a good choice, because it was necessary to carry the steam ducts to the engine room through the ship's magazines. A better solution was to install the wires under the ship's magazines and over the double bottom.

*The Battleship Bismarck* Waldemar Góralski, 2014 Even if they failed to encounter the enemy, every one of their sorties amounted to a brush with death. There were many dangers for Luftwaffe night fighters to contend with; hazardous weather conditions, fog rolling out of nowhere, return fire from the British bombers, enemy night fighters at work over German airfields and simple fatigue could all lead to tragedy. One of the men who survived all of this was Ofw. Kurt Bundrock. Born on 2nd February 1917 in Berlin, Bundrock flew as Bordfunker (radio operator) with NJG 1's ace Hptm. Reinhold Knacke (44 night victories).

*The Heavy Cruiser Prinz Eugen* Waldemar Góralski, 2014-01-19 Following the defeat in the World War I, the Treaty of Versailles limited the tonnage of the German Navy to 144 thousand tons. Moreover, the treaty stipulated that new warships could only be built to replace the decommissioned ones. In 1921 a new law was enacted which brought about the creation of the Reichsmarine. The few warships that Germany was allowed to keep were modernized and new ones were being built to replace the obsolete ones. Construction of light cruisers was a priority and the first of those, built to

replace the Niobe launched in the 19th century, was the Emden. In 1927, during the disarmament conference in Geneva, Germany demanded equal right as far as the expansion of the navy was concerned. Those demands were rejected, therefore, the Reichsmarine drew up the expansion plan. It stipulated construction of new warships within the coming years, including submarines, which were forbidden by the Treaty of Versailles...
