Marketing and Mobile Financial Services Aijaz A. Shaikh,Heikki Karjaluo,2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

Mobile Apps and Banking Paulina Nolan,2014 Through a variety of new mobile applications (apps), technology is rapidly changing the way consumers shop. Today's mobile apps offer new beneficial services designed to enhance the consumer shopping experience. These apps allow

smartphone users to compare competing products and retailers in real-time, seek out the best deals, and pay for their purchases by waving their phones at the checkout counter. Many of these apps have been installed on millions of devices, and all use mobile technology to alter consumers' shopping. Mobile payments can be a convenient way for consumers to pay for goods and services but they also raise consumer protection concerns. This book examines the mobile payments industry and its effects on consumers, while exploring areas where more attention is warranted such as dispute resolution, data security, and privacy.

Bank 3.0 Brett King,2012-11-19 The first edition of BANK 2.0—#1 on Amazon's bestseller list for banking and finance in the US, UK, Germany, France, and Japan for over 18 months—took the financial world by storm and became synonymous with disruptive customer behaviour, technology shift, and new banking models. In BANK 3.0, Brett King brings the story up to date with the latest trends redefining financial services and payments—from the global scramble for dominance of the mobile wallet and the expectations created by tablet computing to the operationalising of the cloud, the explosion of social media, and the rise of the de-banked consumer, who doesn't need a bank at all. BANK 3.0 shows that the gap between customers and financial services players is rapidly widening, leaving massive opportunities for new, non-bank competitors to totally disrupt the industry. On the Web and on Mobile, the customer isn't king—he's dictator. Highly impatient, skeptical, cynical. Brett King understands deeply what drives this new hard-nosed customer. Banking professionals would do well to heed his advice. —Gerry McGovern, author of Killer Web Content

Mobile Banking Adoption in the Western Europe Wilfred Odoke,2011-01 The recent explosion in mobile phone growth and use, resulting from consumers' love affair with their mobile phones and tremendous advances in data connection speeds and other mobile technologies, offers unprecedented opportunities for banks and other financial institutions to provide their customers with a convenient anytime and anywhere access to mobile banking and payment. Mobile financial stakeholders have experimented with mobile banking and mobile payments for years but have failed to offer the consumer a better alternative than the payment instruments already available, such as cash, checks and cards. In Europe, these mobile financial services projects failed, one of the reasons is, because consumer attitudes are notoriously hard to change. A new mobile financial offering must clearly convince the consumer that it delivers great value - significant enough for the consumer to change their behaviour. There have been successful products and services which were created based on consumer perceptions and not because of the advanced nature of the technology they use.

Bank 2.0 Brett King,2010-06-05 BANK 2.0 reveals why customer behaviour is so rapidly changing, how branches will evolve, why cheques are disappearing, and why your mobile phone will replace your wallet—all within the next 10 years.
