Memoir of a Black Christian Nationalist Shelley McIntosh, Ed.D, 2021-11-20 These days are filled with social unrest. Lack of compassion from elected officials, police brutality, unjust laws that create poverty through minimal wages but soaring profits for capitalists, benign neglect of blighted neighborhoods, and crime within the cities and in governments create a landscape of oppression that directly diminishes the quality of life, especially for African Americans. What is the role of the Black church and Black Christians in light of these realities? Just to save souls is not enough! Memoir of a Black Christian Nationalist: Seeds of Liberation is a poignant personal story of the author's thirty-year experience of being a Black Christian Nationalist. The theological framework, program, and organization re-establishing the Black church's relevancy to the liberation struggle are eloquently and informatively interwoven in . . . * The DNA Research about the Race of Jesus * The Powerful Leadership of Reverend Albert B. Cleage Jr., Founder of the Shrines of the Black Madonna * The Transformation of Black People * The Seeds of Liberation—Answers for the Black Church * Practices That Create Freedom, Power, and a More Humane World

RAM-based Neural Networks James Austin, 1998 RAM-based networks are a class of methods for building pattern recognition systems. Unlike other neural network methods, they learn very quickly and as a result are applicable to a wide variety of problems. This important book presents the latest work by the majority of researchers in the field of RAM-based networks.

A Basic Course in Probability Theory Rabi Bhattacharya, Edward C. Waymire, 2017-02-13 This text develops the necessary background in probability theory underlying diverse treatments of stochastic processes and their wide-ranging applications. In this second edition, the text has been reorganized for didactic purposes, new exercises have been added and basic theory has been expanded. General Markov dependent sequences and their convergence to equilibrium is the subject of an entirely new chapter. The introduction of conditional expectation and conditional probability very early in the text maintains the pedagogic innovation of the first edition; conditional expectation is illustrated in detail in the context of an expanded treatment of martingales, the Markov property, and the strong Markov property. Weak convergence of probabilities on metric spaces and Brownian motion are two topics to highlight. A selection of large deviation and/or concentration inequalities ranging from those of Chebyshev, Cramer-Chernoff, Bahadur-Rao, to Hoeffding have been added, with illustrative comparisons of their use in practice. This also includes a treatment of the Berry-Esseen error estimate in the central limit theorem. The authors assume mathematical maturity at a graduate level; otherwise the book is suitable for students with varying levels of background in analysis and measure theory. For the reader who needs refreshers, theorems from analysis and measure theory used in the main text are provided in comprehensive appendices, along with their proofs, for ease of reference. Rabi Bhattacharya is Professor of Mathematics at the University of Arizona. Edward Waymire is Professor of Mathematics at Oregon State University. Both authors have co-authored numerous books, including a series of four upcoming graduate textbooks in stochastic processes with applications.

A Proof of the q -Macdonald-Morris Conjecture for BC_n Kevin W. J. Kadell, 1994 Macdonald and Morris gave a series of constant term q -conjectures associated with root systems. Selberg evaluated a multivariable beta type integral which plays an important role in the theory of constant term identities associated with root systems. Aomoto recently gave a simple and elegant proof of a generalization of Selberg's integral. Kadell extended this proof to treat Askey's conjectured q -Selberg integral, which was proved independently by Habsieger. This monograph uses a constant term formulation of Aomoto's argument to treat the q -Macdonald-Morris conjecture for the root system BC_n . The B_n , $B_n^+ \setminus \{0\}$, and D_n cases of the conjecture follow from the theorem for BC_n . Some of the details for C_n and $C_n^+ \setminus \{0\}$ are given. This illustrates the basic steps required to apply methods given here to the conjecture when the reduced irreducible root system R does not have miniscule weight.

Mathematics of Fuzziness—Basic Issues Xuzhu Wang, Da Ruan, Etienne E. Kerre, 2009-04-03 Mathematics of Fuzziness – Basic Issues introduces a basic notion of ‘fuzziness’ and provides a conceptual mathematical framework to characterize such fuzzy phenomena in Studies in Fuzziness and Soft Computing. The book systematically presents a self-contained introduction to the essentials of mathematics of fuzziness ranging from fuzzy sets, fuzzy relations, fuzzy numbers, fuzzy algebra, fuzzy measures, fuzzy integrals, and fuzzy topology to fuzzy control in a strictly mathematical manner. It contains most of the authors’ research results in the field of fuzzy set theory and has evolved from the authors’ lecture notes to both undergraduate and graduate students over the last three decades. A lot of exercises in each chapter of the book are particularly suitable as a textbook for any undergraduate and graduate student in mathematics, computer science and engineering. The reading of the book will surely lay a solid foundation for further research on fuzzy set theory and its applications.

Discrete-Time and Discrete-Space Dynamical Systems Kuize Zhang, Lijun Zhang, Lihua Xie, 2019-08-06 Discrete-Time and Discrete-Space Dynamical Systems provides a systematic characterization of the similarities and differences of several types of discrete-time and discrete-space dynamical systems, including: Boolean control networks; nondeterministic finite-transition systems; finite automata; labelled Petri nets; and cellular automata. The book's perspective is primarily based on topological properties though it also employs semitensor-product and graph-theoretic methods where

appropriate. It presents a series of fundamental results: invertibility, observability, detectability, reversibility, etc., with applications to systems biology. Academic researchers with backgrounds in applied mathematics, engineering or computer science and practising engineers working with discrete-time and discrete-space systems will find this book a helpful source of new understanding for this increasingly important class of systems. The basic results to be found within are of fundamental importance for further study of related problems such as automated synthesis and safety control in cyber-physical systems using formal methods.

Time Out Barcelona The Editors of Time Out,2011-08-03 Barcelona barely has time to take down the bunting between its rollicking festivals — when there isn't an all night fiesta happening on the street, there's more likely a party on the beach (only 10 minutes away) and never any shortage of action in its clubs and bars. Gentler pursuits are also myriad: the city's museums have got it all covered from Picasso and Miro to perfume and an outstanding aquarium. Its galleries are among the most avant-garde in Europe, and its history writ large in the churches and perfectly preserved medieval alleyways of the Barri Gotic. Time Out's local journalists give travelers the inside scoop on where to stay, eat, shop and what to see. Suggested day-trips to coast, country, and city are also included.

It first summarizes the developing trend of DCNs, and reports four novel DCNs, including a switch-centric DCN, a modular DCN, a wireless DCN, and a hybrid DCN. Furthermore another important factor in DCN targets at managing and optimizing the network activity at the level of transfers to aggregate correlated data flows and thus directly to lower down the network traffic resulting from such data transfers. In particular, the book reports the in-network aggregation of incast transfer, shuffle transfer, uncertain incast transfer, and the cooperative scheduling of uncertain multicast transfer.
