Success of Mergers and Acquisitions in the Insurance Industry: What Can We Learn From Previous Empirical Research? Sven Bach,2014-09-04 Doctoral Thesis / Dissertation from the year 2014 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: 1,3, University of Cologne (Seminar für Allg. BWL, Risikomanagement und Versicherungslehre), language: English, abstract: Since the 20th century, the insurance industry has experienced an unprecedented wave of M&A. However, in spite of the drastic increase in insurance M&A activity, there has been little consistent empirical evidence on the value enhancement of these deals. Hence, many open questions still exist in this research area. The most fundamental questions are whether insurance M&A actually create value and what determinants influence the success of these undertakings. This thesis attempts to find answers to these questions by first examining the status quo of academic literature published in this field of research and bringing together the empirical findings on the success of insurance M&A and its influencing factors. Overall, the literature review outlines that insurance M&A on average tend to create value for shareholders of the target firms as well as for the combined entity of acquirer and target. Moreover, shareholders of acquiring US insurance firms, on average, also benefit from these corporate undertakings. However, negative short-term as well as long-term wealth effects for acquiring insurers' shareholders are the common finding in capital market studies analyzing the effects of M&A transactions in the European insurance industry. Secondly, the reliability and validity of the findings of previous research are tested in an own empirical analysis which uses a fairly new approach to evaluating the success of M&A by using the idea of stochastic dominance (SD). More precisely, using a sample of 102 transactions conducted by publicly traded Western European insurance firms between the years 1993 and 2009, this work analyzes whether investors in acquiring insurance firms benefit from M&A by comparing return distrib

Foreign Operation Methods Lawrence S. Welch,Gabriel R.G. Benito,Bent Petersen,2018-01-26 The choice of foreign operation methods, whether they are used singly or in combination, is a critical question for internationalising companies. This thoroughly updated edition of a successful text provides comprehensive coverage of the main tools companies use in seeking to penetrate foreign markets – covering investment, exporting and contractual arrangements such as franchising and management contracts. An important feature of this book is its thorough overview of theoretical and strategic perspectives such as mode packaging, mode switching and mode flexibility and will be invaluable for final year undergraduate and postgraduate students.

Foreign Direct Investment and the Multinational Enterprise Steven Brakman,Harry Garretsen,2008 The multinational firm and its main vehicle, foreign direct investment, are key forces in economic globalization. Their importance to the world economy can be seen in the fact that since 1990 foreign direct investment has grown more rapidly than the world GDP and world trade. Despite this, the causes and consequences of multinational firm activity are little understood and until recently relatively unexamined in the theoretical literature. This CESifo volume fills this gap, examining the multinational enterprise (MNE) and foreign direct investment (FDI) from both theoretical and empirical perspectives. In the theoretical chapters, leading scholars take a wide range of modern analytical approaches-- from new growth and trade theories to new economic geography, industrial organization, and game theory. Taking current theoretical work on MNE and FDI as a starting point and aiming to extend the existing theoretical framework, the contributors consider such topics as investment liberalization and firm location, tax competition, and welfare consequences of FDI and outsourcing. The empirical chapters test several of the key hypotheses of recent theoretical work on MNE and FDI, examining topics that include productivity effects on Italian MNEs, the different effects of outsourcing in Austria and Poland, location decisions of MNEs in the European Union, and other topics. Bankruptcy Tax Guide - Publication 908 (For Use in Preparing 2020 Return) Internal Revenue Service,2021-03-05 This publication isn't intended to cover bankruptcy law in general, or to provide detailed discussions of the tax rules for the more complex corporate bankruptcy reorganizations or other highly technical transactions. Additionally, this publication isn't updated on an annual basis and may not reflect recent developments in bankruptcy or tax law. If you need more guidance on the bankruptcy or tax laws applicable to your case, you should seek professional advice. This publication explains the basic federal income tax aspects of bankruptcy. A fundamental goal of the bankruptcy laws enacted by Congress is to give an honest debtor a financial fresh start. This is accomplished through the bankruptcy discharge, which is a permanent injunction (court-ordered prohibition) against the collection of certain debts as a personal liability of the debtor. Bankruptcy proceedings begin with the filing of either a voluntary petition in the United States Bankruptcy Court, or in certain cases an involuntary petition filed by creditors.

United Nations Centre on Transnational Corporations Khalil Hamdani,Lorraine Ruffing,2015-03-24 The United Nations Centre on Transnational Corporations (UNCTC) was established in 1975 and abolished in 1992. It was an early effort by the UN to address the overlapping issues of national sovereignty, corporate responsibility and global governance. These issues have since multiplied and deepened with globalization. This book recounts the UNCTC experience and its lessons for international organizations. This book is not only an insider perspective by two former staff but also a collective memoir of the UNCTC as an international organization that

attempted with varying success to defuse the clash between corporates and states that erupted in the turbulent 1970s. This personal account of the UNCTC is a mixture of history, analysis, reflections, and critical commentaries, told in different voices that penetrate the bland persona of international civil service. In this retelling, the authors seek to address misconceptions amongst the more general literature and to seek to provide accounts of both its positive and negative features. The UNCTC experience recounted in this book holds valuable lessons for international organization and will be of interest to student, scholars and practitioners alike.

The Emergence of Southern Multinationals Louis Brennan,2010-12-21 In today's globalised world there is a need to investigate new trends in the global economy which impact on Europe. The emergence of these southern multinationals in Europe is one such phenomenon. This book explores the existing trends and trajectories of these companies, the evidence of their impact and their strategies and processes.

Competition Law and Consumer Protection Katalin Judit Cseres,2005-01-01 The assumption that competition law and consumer protection are mutually reinforcing is rarely challenged. The theory seems uncontroversial. However, because a positive interaction between the two is presumed to be self-evident, the frequent conflicts that do in fact arise are often dealt with on an ad hoc basis, with no overarching legal authority. There is a clear need for a detailed and coherent understanding of exactly where the complements and tensions between the two policy areas exist. Dr Cseres in-depth analysis provides that understanding. Proceeding from the dual perspective of law and economics that is, of justice, fairness, and reasonableness on the one hand, and of efficiency of the other she fully considers such underlying issues as the following: the role of competition law and consumer law in a free market economy;the notion of consumer welfare;the effect of the modernisation of EC competition law for consumers;economics theories of information, bounded rationality, and transaction costs;the special significance of vertical agreements and merger control; and,how consumers are affected by information asymmetries. The ultimate focus of the book is on current and emerging EC law, in which a rapprochement between the two areas seems to be under way. Dr. Cseres provides a knowledgeable guide to the various strands of theory, policy, and jurisprudence that (she shows) ought to be taken into account in the process, including schools of thought and law and policy experience in both Europe and the United States. A special chapter on Hungary, where post-1989 law and practice reveal a fresh and distinctly forward-looking understanding of the matter, is one of the book's most extraordinary features. Competition Law and Consumer Protection stands alone as a committed contribution to bridging a gap in legal knowledge the significance of which grows daily. It will be of immeasurable value to a wide range of professionals from academics and researchers to officials, policymakers, and practitioners in competition law, consumer protection advocacy, economic theory and planning, business administration, and various pertinent government authorities.

Financing Sustainable Development Magdalena Ziolo,Bruno S. Sergi,2019-07-27 This book is among the first to address the issue of assessing the efficiency of sustainable development financing from a theoretical and methodical point of view. The innovative nature of research is expressed through the study of new phenomena in finance including sustainable financial systems, sustainable finance, ESG risk and individual and institutional motivations of financial managers in the sustainability concept. The book aims to draw attention to the significant gap in the existing research.The concept of Sustainable Development, if placed in an economic category, requires a lot of attention, but seeing the cognitive category from the perspective of the discipline of finance, the latter is unsatisfactory, with questions remaining unanswered. At the same time, the rank problem, its strategic dimension and the amount of financial resources allocated and disbursed for the purposes of focusing around sustainable development, identification of financial phenomena accompanying this category is seen as a priority. Most measures financing Sustainable Development and measures of public spending efficiency are measures subject to rigor and rules due to their specificity, which means actions aimed at increasing efficiency are treated as a priority. This book will be of interest to leading representatives of academia, practitioners, executives, officials, and graduate students in economics, finance, management, statistics, law and political sciences.

Retrofitting for Optimal Energy Performance Tantau, Adrian,2019-06-14 Retrofitting expresses, in a traditional approach, the process of improving something after it has been manufactured, constructed, or assembled. These systems integrate new technologies, new functions, and new services that increase the energy performance in existing private, public, and commercial buildings. Retrofitting for Optimal Energy Performance is a comprehensive reference source that examines environmentally conscious technologies and their applications in advancing retrofitting practices. Providing relevant theoretical frameworks and the latest empirical research findings in the area, it highlights an array of topics such as climate change, energy management, and optimization modeling, and is essential for academicians, students, researchers, engineers, architects, entrepreneurs, managers, policymakers, and building owners.
