China's Regional Development Ming Lu,Zhao Chen,Zhu Xiwei,Xu Xianxiang,2013-07-18 China is a large developing economy and it has been deeply involved in globalization since its economic reform and opening-up. Simultaneously, China has seen a significant change in the spatial distribution of economic resources, especially capital and labor. In the recent 10 years, economists have made significant progress in both theoretical and empirical studies on related topics. The book provides an overview on the existing literature and current policy debates on what we have known and what we have misunderstood. This book includes an analytical framework of the New Economic Geography (NEG) with political economy to help us understand China's regional development issues. The book of 10 chapters is organized into four thematic sections. The first section is a theoretical discussion on the relationship between economic agglomeration and interregional balanced development. The second section is a political economy analysis on regional and urban-rural development. The third section provides a summary on empirical literatures concerning from market segmentation and institutional barriers to production factor mobility. The final section consists of four empirical chapters on the relationship between agglomeration and balance, which is the core of relevant policy debates. The book argues that for China to achieve both efficiency and balance for regional development, China may need to reform its systems which constrain production factors mobility. This book is a valuable reference for readers who are interested in spatial economics and the Chinese economy, especially its regional and urban development.

Man-Machine-Environment System Engineering

Shengzhao Long, Balbir S. Dhillon, 2017-08-21 These proceedings showcase the best papers selected from more than 500 submissions, introducing readers to the top research topics and the latest developmental trends in the theory and application of Man-Machine-Environment System Engineering (MMESE). This research topic was first established in China by Professor Shengzhao Long in 1981, with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd, 1993, Xuesen Qian wrote: "You have created a very important modern science and technology in China!" MMESE primarily focuses on the relationship between Man, Machine and Environment, studying the optimum combination of related Man-Machine-Environment systems. In this paradigm, "Man" refers to working people as the subject at the workplace (e.g. operators, decision-makers); "Machine" is the

general name for any object controlled by Man (including tools, machinery, computers, systems and technologies), and "Environment" describes the specific working conditions under which Man and Machine interact (e.g. temperature, noise, vibration, hazardous gases etc.). In turn, the three goals of optimization are to ensure safety, efficiency and economy in this context. These proceedings present interdisciplinary studies on the concepts and methods of physiology, psychology, system engineering, computer science, environmental science, management, education, and other related disciplines. They offer a valuable resource for all researchers and professionals whose work involves interdisciplinary areas touching on MMESE subjects.

The contributions presented here can help promote the development of green mobility and intelligent transportation technologies to improve interconnectivity, resource sharing, flexibility and efficiency. Given its scope, the book will benefit researchers and engineers in the fields of Transportation Technology and Traffic Engineering, Automotive and Mechanical Engineering, Industrial and System Engineering, and Electrical Engineering alike.

Party and State in Post-Mao China Teresa Wright, 2015-05-06 In recent decades, China has become a quasi-capitalist economic powerhouse. Yet it continues to be ruled by the same Communist Party-dominated government that has been in power since 1949. But how has China's political system achieved such longevity? And what does its stability tell us about the future of authoritarian versus liberal democratic governance? In this detailed analysis of the deeply intertwined relationship between the ruling Communist Party and governing state, noted China expert Teresa Wright provides insightful answers to these important questions. Though many believe that the Chinese party-state has maintained its power despite its communist and authoritarian features, Wright argues that the key to its sustained success lies in its careful safeguarding of some key communist and authoritarian characteristics, while simultaneously becoming more open and responsive to public participation. She contends that China's post-Mao party-state compares well to different forms of political rule, including liberal democratic government. It has fulfilled the necessary functions of a stable governing regime: satisfying key demographic

groups and responding to public grievances; maintaining economic stability and growth; and delivering public services - without any real reduction in CCP power and influence. Questioning current understandings of the nature, strengths, and weaknesses of democracy and authoritarianism, this thought-provoking book will be essential reading for all students and scholars of Chinese politics and international relations.
