Shadow Economies of Cinema Ramon Lobato, 2019-07-25 How do people access movies today? What are the most popular and powerful channels for media distribution on a global scale? How are film industries changing in the face of media convergence and digitisation? To answer questions such as these, argues Ramon Lobato, we must shift our gaze away from the legal film business and toward cinema's shadow economies. All around the world, films are bought from roadside stalls, local markets, and grocery stores; they are illegally downloaded and streamed; they are watched in makeshift video clubs, on street corners, and in restaurants, shops and bars. International film culture in its actually-existing forms is a messy affair, and it relies to a great extent on black and grey media markets. Examining the industrial dynamics of these subterranean film networks across a number of different sites - from Los Angeles to Lagos, Melbourne to Mexico City - this book shows how they constitute a central rather than marginal part of audiovisual culture and commerce. Combining film industry analysis with cultural theory, *Shadow Economies of Cinema* opens up a new area of inquiry for cinema studies, putting industry research into dialogue with wider debates about economic informality and commodity circulation. Written in an accessible style, this book offers an original 'bottom-up' perspective on the global cinema industry for researchers and students in film studies, cultural studies, and media and communications.

Content Distribution for Mobile Internet: A Cloud-based Approach Zhenhua Li,Yafei Dai,Guihai Chen,Yunhao Liu,2023-02-14 Content distribution, i.e., distributing digital content from one node to another node or multiple nodes, is the most fundamental function of the Internet. Since Amazon’s launch of EC2 in 2006 and Apple’s release of the iPhone in 2007, Internet content distribution has shown a strong trend toward polarization. On the one hand, considerable investments have been made in creating heavyweight, integrated data centers (“heavy-cloud”) all over the world, in order to achieve economies of scale and high flexibility/efficiency of content distribution. On the other hand, end-user devices (“light-end”) have become increasingly lightweight, mobile and heterogeneous, creating new demands concerning traffic usage, energy consumption, bandwidth, latency, reliability, and/or the security of content distribution. Based on comprehensive real-world measurements at scale, we observe that existing content distribution techniques often perform poorly under the abovementioned new circumstances. Motivated by the trend of “heavy-cloud vs. light-end,” this book is dedicated to uncovering the root causes of today’s mobile networking problems and designing innovative cloud-based solutions to practically address such problems. Our work has produced not only academic papers published in prestigious conference proceedings like SIGCOMM, NSDI, MobiCom and MobiSys, but also concrete effects on industrial systems such as Xiaomi Mobile, MIUI OS, Tencent App Store, Baidu PhoneGuard, and WiFi.com. A series of practical takeaways and easy-to-follow testimonials are provided to researchers and practitioners working in mobile networking and cloud computing. In addition, we have released as much code and data used in our research as possible to benefit the community.
