*Inkscape 0.48 Illustrator's Cookbook* Michaela Jurković,Rigel Di Scala,2011-04-26 Annotation Inkscape is an open source vector graphics editor with an intuitive user interface that has enough depth to make quality graphic designs with an attractive layout comparable to what you would make using Illustrator or CorelDraw. But choosing the right tool and the best approach to creating the desired effect can be challenging. Inkscape 0.48 Illustrator's Cookbook makes it super-easy for you to make your own vector-based graphics with the powerful Inkscape editor. Inkscape 0.48 Illustrator's Cookbook provides you with the latest recipes to quickly create scalable vector graphics. Recipes in this book teach you about some of the most useful time-saving features in Inkscape accompanied by a list of keyboard shortcuts that you can easily memorize. In addition to covering use of Inkscape tools and their advanced features, examples from the recipes uncover solutions to common graphics problems. The book starts off with familiarizing you with the tools and techniques in Inkscape that you can use to draw 2D shapes, calligraphic shapes, and 3D boxes easily. It then guides you through the most common color-changing steps performed in Inkscape along with some convenient procedures that can save your time when dealing with colors. It explains drawing using linear and radial gradients, which are irreplaceable, usage of clones to create interesting effects in illustrations, and live-path effects that can help you speed up constructing a shape and make the process more natural. You will learn how to make those tweaks on some of the ready-made filters, and in the final recipe we will create a filter from scratch. This practical book also contains recipes showing how to use Inkscape as a raster editor and how to achieve photo-realistic effects in Inkscape. For each important technique and skill, you'll see some simple recipes, then some more advanced recipes followed by an explanation of how Inkscape works to produce the desired effects in your illustrations. By the end of this book you will be confident enough to create your own vector-based graphics with Inkscape. Get solutions to common graphic problems to achieve photo-realistic effects with Inkscape.

Curves for the Mathematically Curious Julian Havil, 2021-11-02 Ten amazing curves personally selected by one of today's most important math writers Curves for the Mathematically Curious is a thoughtfully curated collection of ten mathematical curves, selected by Julian Havil for their

significance, mathematical interest, and beauty. Each chapter gives an account of the history and definition of one curve, providing a glimpse into the elegant and often surprising mathematics involved in its creation and evolution. In telling the ten stories, Havil introduces many mathematicians and other innovators, some whose fame has withstood the passing of years and others who have slipped into comparative obscurity. You will meet Pierre Bézier, who is known for his ubiquitous and eponymous curves, and Adolphe Quetelet, who trumpeted the ubiquity of the normal curve but whose name now hides behind the modern body mass index. These and other ingenious thinkers engaged with the challenges, incongruities, and insights to be found in these remarkable curves—and now you can share in this adventure. *Curves for the Mathematically Curious* is a rigorous and enriching mathematical experience for anyone interested in curves, and the book is designed so that readers who choose can follow the details with pencil and paper. Every curve has a story worth telling.

**The Architecture of Continuity** Lars Spuybroek, 2008 That buildings are made of elements doesn't mean that architecture should be based on elementarism; on the contrary, we should strive for an architecture of continuity that fuses tectonics with textile, abstraction with empathy, and matter with expressivity. This is the crux of the argument Lars Spuybroek makes in this book, the first fully theoretical account of his innovative work. The state of contemporary architecture is the product of a 150-year battle between the Polytechnique and Beaux-Arts schools of design, which has forced us into a stalemate between the radically opposed positions of high-tech and sculpturism. Spuybroek aims to do no less than mend this rift through rethinking technology as an extension of our feeling senses, materiality as the realm of activity and agency, and structure as the result of genesis. Building on Gottfried Semper's materialist theory of architecture, he takes us from a philosophy of technology to a surprisingly historical argumentation that constantly revives the words of John Ruskin, William Hogarth and Wilhelm Worringer. Alongside a number of essays, the book contains extensive conversations in which we witness him refining and sharpening his arguments (We will see a merging of Art Nouveau and Bauhaus, where empathy has been liberated from manual labor and machines have been liberated from uniform repetition). In a period of theoretical tranquility in architecture, this book takes a refreshing turn back to the basics, one in which tools, methodology and architectural aesthetics are recalibrated.

**Drawing Futures** Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 *Drawing Futures* brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. *Drawing Futures* will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. *Drawing Futures* focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.
