From wilderness to the urban, from Nigeria to the polar regions, from mountains to rivers and the desert, this book explores some of the key places and physical features represented in travel writing. Perspectives on Travel Writing Glenn Hooper,2017-05-15 Ranging from the early modern to the postcolonial, and dealing mainly with encounters in Europe, the Americas and the Middle East, Perspectives on Travel Writing is a collection of new essays by international scholars that examines some of the various contexts of travel writing, as well as its generic characteristics. Contributions examine the similarities between autobiography and memoir, fiction, and travel writing, and attempt to define travel writing as a genre. Utilising a variety of approaches, the essays display a shared concern with what travel writing does and how it does it. The effects of encounter and border-crossing on gender, 'race', and national identity are considered throughout. The collection begins with a review of some of the problems and issues facing the scholar of travel writing and moves on to a detailed discussion of the qualities of travel writing and its related forms. It then presents in chronological order a number of case studies, before closing with a critical discussion of approaches to the subject. An essay collection with broad historical and geographical coverage, this volume should appeal to students and researchers of travel and travel-related literatures from across the Humanities.

Ada 95 David A. Wheeler,2012-12-06 Lovelace provides an introduction to Ada 95, one of the most widely used programming languages in the world. Although the reader is assumed to have a basic understanding of programming, no prior exposure to Ada is assumed and all the basics of the language are covered. The book comprises eighteen chapters each of which is composed of short sections designed to cover a small number of key concept and to provide a test question to check the reader's understanding of the concepts covered. Each chapter then concludes with a small quiz to help ensure that the reader has grasped the principles covered in the chapter. One of Ada 95's new features, its object-oriented facilities, is covered in depth, and all of the essential features of Ada programming are covered thoroughly. In Ada 95 significant enhancements were also added to Ada's ability to interface with other programming languages (such as C, Fortran, and Cobol) and these are covered in one chapter. As a result both students and professional programmers learning Ada for the first time will welcome this new text.

Parametric design is a fast-growing development of CAD that lets architects and designers specify the key parameters of their model and make changes interactively. Whenever changes are made the rest of the model updates automatically. Through a detailed description of various parametric, generative and algorithmic techniques, this book provides a practical guide to generating geometric and topological solutions for various situations, including explicit step-by-step tutorials. While the techniques and algorithms can be generalized to suit to any parametric environment, the book illustrates its concepts using the scripting languages of one of the most powerful 3D visualization and animation design software systems (Autodesk 3ds Max MAXScript), one of the most popular open-source Java-based scripting environments (Processing), and a brand new language specifically tailored for parametric and generative design (Autodesk DesignScript). This clear, accessible book will have a wide appeal to students and practitioners who would like to experiment with parametric techniques.
