Twelve Years a Slave Solomon Northup, 2013-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Overcoming School Refusal Joanne Garfi, 2018-01-31 School refusal affects up to 5% of children and is a complex and stressful issue for the child, their family and school. The more time a child is away from school, the more difficult it is for the child to resume normal school life. If school refusal becomes an ongoing issue it can negatively impact the child's social and educational development. Psychologist Joanne Garfi spends most of her working life assisting parents, teachers, school counsellors, caseworkers, and community policing officers on how best to deal with school refusal. Now her experiences and expertise are available in this easy-to-read practical book. Overcoming School Refusal helps readers understand this complex issue by explaining exactly what school refusal is and provides them with a range of strategies they can use to assist children in returning to school. Areas covered include: • types of school refusers • why children refuse to go to school • symptoms • short term and long term consequences • accurate assessment • treatment options • what parents can do • what schools can do • dealing with anxious high achievers • how to help children on the autism spectrum with school refusal

Rose's Vintage Kayte Nunn, 2016-04-18 With her heart in tatters after a relationship break-up, Rose Bennett swaps her hometown of London for the sunny shores of Australia – but she arrives to find the Shingle Valley shrouded in winter. As the weather improves, Rose starts to unlock the secrets of the valley – from bonfire ceremonies and wine-making traditions to eccentric locals and their histories. Despite herself, Rose starts to fall in love: with the valley, the wines, the two children she's helping to look after – and with the handsome and brilliant Mark Cameron, owner of the troubled Kalkari Wines estate. What will happen when Mark's estranged wife, the tempestuous Isabella, returns? Will Rose find a future in the Shingle Valley, or will she be forced to leave? 'Some books, like wine can be sipped – but I had to gulp this novel down! It was delicious!' – Rachael Treasure

Placing Words William J. Mitchell, 2005-08-26 Reflections on architecture and the exchange of information in the spaces and places of the city, from the necessity of skyscrapers in an age of Web sites to cities as talent magnets, from architectural bling to the neo-minimalism of the new MoMA. The meaning of a message, says William Mitchell, depends on the context of its reception. Shouting 'fire' in a crowded theater produces a dramatically different effect from barking the same word to a squad of soldiers with guns, he observes. In *Placing Words*, Mitchell looks at the ways in which urban spaces and places provide settings for communication and at how they conduct complex flows of information through the twenty-first century city. Cities participate in the production of meaning by providing places populated with objects for words to refer to. Inscriptions on these objects (labels, billboards, newspapers, graffiti) provide another layer of meaning. And today, the flow of digital information—from one device to another in the urban scene—creates a digital network that also exists in physical space. *Placing Words* examines this emerging system of spaces, flows, and practices in a series of short essays—snapshots of the city in the twenty-first century. Mitchell questions the necessity of flashy downtown office towers in an age of corporate Web sites. He casts the shocked-and-awed Baghdad as a contemporary Guernica. He describes architectural makeovers throughout history, listing Le Corbusier's Fab Five Points of difference between new and old architecture, and he discusses the architecture of Manolo Blahniks. He pens an open letter to the Secretary of Defense recommending architectural features to include in torture chambers. He compares Baudelaire, the Parisian flaneur, to Spiderman, the Manhattan traceur. He describes the iPod-like galleries of the renovated MoMA and he recognizes the camera phone as the latest step in a process of image mobilization that began when artists stopped painting on walls and began making pictures on small pieces of wood, canvas, or paper. The endless flow of information, he makes clear, is not only more pervasive and efficient than ever, it is also generating new cultural complexities.

Code Andrea Gleiniger, Georg Vrachliotis, 2012-12-13 The process of coding is a systematic experimentation with signs, symbols, and the construction of larger cultural meanings. The fourth volume in the series *Kontext Architektur* examines the architectural-historical and -theoretical relevance of the concept of code from various perspectives. The authors and editors start from the premise that this concept makes for new ways of translating architecture into language. Thus, the dominance of computer simulation makes it clear that the building is no longer merely a vehicle for signs, but literally also their product. The code has penetrated, as it were, from the exterior of the building into its interior, into its structure. We are dealing with both a socio-cultural as well

as with a mathematical and formal notion of code. The goal of this book is thus to arrive at a critical grasp of the contours of this vibrant conceptual tension between the cultural and the formal, the outside and the inside, while also formulating questions for further exploration that are relevant for architecture.

The Alphabet and the Algorithm Mario Carpo, 2011-02-04 The rise and fall of identical copies: digital technologies and form-making from mass customization to mass collaboration. Digital technologies have changed architecture—the way it is taught, practiced, managed, and regulated. But if the digital has created a “paradigm shift” for architecture, which paradigm is shifting? In *The Alphabet and the Algorithm*, Mario Carpo points to one key practice of modernity: the making of identical copies. Carpo highlights two examples of identity crucial to the shaping of architectural modernity: in the fifteenth century, Leon Battista Alberti's invention of architectural design, according to which a building is an identical copy of the architect's design; and, in the nineteenth and twentieth centuries, the mass production of identical copies from mechanical master models, matrixes, imprints, or molds. The modern power of the identical, Carpo argues, came to an end with the rise of digital technologies. Everything digital is variable. In architecture, this means the end of notational limitations, of mechanical standardization, and of the Albertian, authorial way of building by design. Charting the rise and fall of the paradigm of identity, Carpo compares new forms of postindustrial digital craftsmanship to hand-making and the cultures and technologies of variations that existed before the coming of machine-made, identical copies. Carpo reviews the unfolding of digitally based design and construction from the early 1990s to the present, and suggests a new agenda for architecture in an age of variable objects and of generic and participatory authorship.

Me++ William J. Mitchell, 2004-09-17 How the transformation of wireless technology and the creation of an

interconnected world are changing our environment and our lives. With *Me++* the author of *City of Bits* and *e-topia* completes an informal trilogy examining the ramifications of information technology in everyday life. William Mitchell describes the transformation of wireless technology in the hundred years since Marconi—the scaling up of networks and the scaling down of the apparatus for transmission and reception. It is, he says, as if Brobdingnag had been rebooted as Lilliput; Marconi's massive mechanism of tower and kerosene engine has been replaced by a palm-size cellphone. If the operators of Marconi's invention can be seen as human appendages to an immobile machine, today's hand-held devices can be seen as extensions of the human body. This transformation has, in turn, changed our relationship with our surroundings and with each other. The cellphone calls from the collapsing World Trade Center towers and the hijacked jets on September 11 were testimony to the intensity of this new state of continuous electronic engagement. Thus, Mitchell proposes, the trial separation of bits (the elementary unit of information) and atoms (the elementary unit of matter) is over. With increasing frequency, events in physical space reflect events in cyberspace, and vice versa; digital information can, for example, direct the movement of an aircraft or a robot arm. In *Me++* Mitchell examines the effects of wireless linkage, global interconnection, miniaturization, and portability on our bodies, our clothing, our architecture, our cities, and our uses of space and time. Computer viruses, cascading power outages, terrorist infiltration of transportation networks, and cellphone conversations in the streets are symptoms of a dramatic new urban condition—that of ubiquitous, inescapable network interconnectivity. He argues that a world governed less and less by boundaries and more and more by connections requires us to reimagine and reconstruct our environment and to reconsider the ethical foundations of design, engineering, and planning practice.

Logical Pluralism JC Beall, Jeffrey C. Beall, Greg Restall, 2006 Consequence is at the heart of logic, and an account of consequence offers a vital tool in the evaluation of arguments. This text presents what the authors term as 'logical pluralism' arguing that the notion of logical consequence doesn't pin down one deductive consequence relation; it allows for many of them.

Physical Theory and its Interpretation William Demopoulos, Itamar Pitowsky, 2010-11-20 The essays in this volume were written by leading researchers on classical mechanics, statistical mechanics, quantum theory, and relativity. They detail central topics in the foundations of physics, including the role of symmetry principles in classical and quantum physics, Einstein's hole argument in general relativity, quantum mechanics and special relativity, quantum correlations, quantum logic, and quantum probability and information.

Doubt Truth to be a Liar Graham Priest, 2006 The book is required reading for anyone who wishes to understand dialetheism; (especially) for anyone who wishes to continue to endorse the old Aristotelian orthodoxy; and, more generally, for anyone who wishes to understand the role that contradiction plays in our thinking.--BOOK JACKET.
