Order Statistics and Their Use in Testing and Estimation: Tests based on range and studentized range of samples from a normal population Harman Leon Harter,1970

Percentage Points of the Ratio of Two Ranges and Related Tables Harman Leon Harter,1962 IN TESTING THE HYPOTHESIS THAT THE VARIANCES OF TWO POPULATIONS ARE EQUAL, A TEST BASED ON THE RATIO F' of the ranges of two samples, one from each population, is simpler than the conventional F test based on the ratio of the sample variances, and it is only slightly less powerful. In order to apply such a test, more extensive and more accurate tables of the percentage points of the ratio of the ranges of two samples from a normal population are needed. This required the computation, by numerical integration, of auxiliary tables of the probability density function of the range and both the probability density function and the cumulative distribution function of the ratio of two ranges, to 8, 6, and 5 decimal places, respectively. The next step was the computation, to 4 significant figures, by inverse interpolation in the table of the cumulative distribution function, of the percentage points of the ratio of two ranges. Finally, a table was computed. This report contains all of the probability density function tables together with a description of the method of computation, and an example of the use of the tables of percentage points and power.
