Community Search over Big Graphs Xin Huang,Laks V.S. Lakshmanan,Jianliang Xu,2022-05-31 Communities serve as basic structural building blocks for understanding the organization of many real-world networks, including social, biological, collaboration, and communication networks. Recently, community search over graphs has attracted significantly increasing attention, from small, simple, and static graphs to big, evolving, attributed, and location-based graphs. In this book, we first review the basic concepts of networks, communities, and various kinds of dense subgraph models. We then survey the

state of the art in community search techniques on various kinds of networks across different application areas. Specifically, we discuss cohesive community search, attributed community search, social circle discovery, and geo-social group search. We highlight the challenges posed by different community search problems. We present their motivations, principles, methodologies, algorithms, and applications, and provide a comprehensive comparison of the existing techniques. This book finally concludes by listing publicly available real-world datasets and useful tools for facilitating further research, and by offering further readings and future directions of research in this important and growing area.

Structured Search for Big Data Mikhail Gilula, 2015-08-26 The WWW era made billions of people dramatically dependent on the progress of data technologies, out of which Internet search and Big Data are arguably the most notable. Structured Search paradigm connects them via a fundamental concept of key-objects evolving out of keywords as the units of search. The key-object data model and KeySQL revamp the data independence principle making it applicable for Big Data and complement NoSQL with full-blown structured querying functionality. The ultimate goal is extracting Big Information from the Big Data. As a Big Data Consultant, Mikhail Gilula combines academic background with 20 years of industry experience in the database and data warehousing technologies working as a Sr. Data Architect for Teradata, Alcatel-Lucent, and PayPal, among others. He has authored three books, including *The Set Model for Database and Information Systems* and holds four US Patents in Structured Search and Data Integration. Conceptualizes structured search as a technology for querying multiple data sources in an independent

and scalable manner. Explains how NoSQL and KeySQL complement each other and serve different needs with respect to big data Shows the place of structured search in the internet evolution and describes its implementations including the real-time structured internet search

**Big Data Investments: Effects of Internet Search Queries on German Stocks**

Jan Becker,2015-08 In recent years, the internet has developed very quickly and became a major source of information all over the planet. Many scientists have used search engine query data to forecast econometric time series like consumer confidence indicators, unemployment rates, retail sales, house price indices, stock prices, volatility of stocks and even commodity prices. Following the prior research this study analyzes the impact of internet search engine data on capital markets. Many authors already have contributed to index level data and most of them on the US market. This study adds to the existing literature on the German stock market. Two research questions are answered: First, whether an increase in search queries drives individual stock returns and second, whether queries affect the implied volatility of stock options. After controlling for seasonality, autocorrelation and general market risk, in the further analysis also the Price-to-Book valuation, one year performance and historical volatility are examined in interaction with internet search queries.

Hayward,2024-01-27 Reprint of the original, first published in 1883.

*Big Little Man* Alex Tizon, 2014-06-10 “Alex Tizon fearlessly penetrates the core of not just what it means to be male and Asian in America, but what it means to be human anywhere.”—Cheryl Strayed, New York Times bestselling author Shame, Alex Tizon tells us, is universal—his own happened to be about race. To counteract the steady diet of American television and movies that taught Tizon to be ashamed of his face, his skin color, his height, he turned outward. (“I had to educate myself on my own worth. It was a sloppy, piecemeal education, but I had to do it because no one else was going to do it for me.”) Tizon illuminates his youthful search for Asian men who had no place in his American history books or classrooms. And he tracks what he experienced as seismic change: the rise of powerful, dynamic Asian men like Yahoo! cofounder Jerry Yang, actor Ken Watanabe, and NBA starter Jeremy Lin. Included in this new edition of *Big Little Man* is Alex Tizon’s “My Family’s Slave”—2017’s best-read digital article. Published only weeks after Tizon’s death in 2017, it delivers a provocative, haunting, and ultimately redemptive coda. “A ruthlessly honest personal story and a devastating critique of contemporary American culture.”—The Seattle Times “Part candid memoir, part incisive cultural study, *Big Little Man* addresses—and explodes—the stereotypes of Asian manhood. Alex Tizon writes with acumen and courage, and the result is a book at once illuminating and, yes, liberating.”—Peter Ho Davies, author of *The Welsh Girl* “This personal narrative of self-education and growth will engage any reader captivated by the sources of American, and Asian-American, manhood—its multitude of inheritances and prospects.”—Minneapolis Star Tribune

**On the Prowl** Mark Hallett, John M. Harris, 2020-06-02 Big cats such as lions, tigers, leopards, and jaguars fascinate us like few other creatures. They are enduring symbols of natural majesty and power. Yet despite the magnetic appeal of the big cats, their origins and evolutionary history remain poorly understood—and human activity threatens to put an end to the big cats' glory. *On the Prowl* is a fully illustrated and approachable guide to the evolution of the big cats and what it portends for their conservation today. Mark Hallett and John M. Harris trace the origins of these iconic carnivores, venturing down the evolutionary pathways that produced the diversity of big cat species that have walked the earth. They place the evolution and paleobiology of these species in the context of ancient ecosystems and climates, explaining what made big cats such efficient predators and analyzing their competition with other animals. Hallett and Harris pay close attention to human impact, from the evidence of cave paintings and analysis of ancient extinctions up to present-day crises. Their engaging and carefully documented account is brought to life through Hallett's detailed, vivid illustrations, based on the most recent research by leading paleontologists. Offering a fresh look at the rise of these majestic animals, *On the Prowl* also makes a powerful case for renewed efforts to protect big cats and their habitats before it is too late.
