*Advances in Mining Graphs, Trees and Sequences* Takashi Washio, Joost N. Kok, Luc de Raedt, 2005 Ever since the early days of machine learning and data mining, it has been realized that the traditional attribute-value and item-set representations are too limited for many practical applications in domains such as chemistry, biology, network analysis and text mining. This has triggered a lot of research on mining and learning within alternative and more expressive representation formalisms such as computational logic, relational algebra, graphs, trees and sequences. The motivation for using graphs, trees and sequences. Is that they are 1) more expressive than flat representations, and

2) potentially more efficient than multi-relational learning and mining techniques. At the same time, the data structures of graphs, trees and sequences are among the best understood and most widely applied representations within computer science. Thus these representations offer ideal opportunities for developing interesting contributions in data mining and machine learning that are both theoretically well-founded and widely applicable. The goal of this book is to collect recent outstanding studies on mining and learning within graphs, trees and sequences in studies worldwide.

**Translation as Scholarship** Jay Crisostomo,2019-01-14 In the first half of the 2d millennium BCE, translation occasionally depicted semantically incongruous correspondences. Such cases reflect ancient scribes substantiating their virtuosity with cuneiform writing by capitalizing on phonologic, graphemic, semantic, and other resemblances in the interlingual space. These scholar-scribes employed an essential scribal practice, analogical hermeneutics, an interpretative activity grounded in analogical reasoning and empowered by the potentiality of the cuneiform script. Scribal education systematized such practices, allowing scribes to utilize these habits in copying compositions and creating translations. In scribal education, analogical hermeneutics is exemplified in the word list Izi, both in its structure and in its occasional bilingualism. By examining Izi as a product of the social field of scribal education, this book argues that scribes used analogical hermeneutics to cultivate their craft and establish themselves as knowledgeable scribes. Within a linguistic

epistemology of cuneiform scribal culture, translation is a tool in the hands of a knowledgeable scholar.
