Magazines and Modern Identities Tim Satterthwaite,Andrew Thacker,2023-09-21 In the late nineteenth and early twentieth century, ideals of technological progress and mass consumerism shaped the print cultures of countries across the globe. Magazines in Europe, the USA, Latin America, and Asia inflected a shared internationalism and technological optimism. But there were equally powerful countervailing influences, of patriotic or insurgent nationalism, and of traditionalism, that promoted cultural differentiation. In their editorials, images, and advertisements magazines embodied the tensions between these domestic imperatives and the forces of global modernity. Magazines and Modern Identities explores how these tensions played out in the magazine cultures of ten different countries, describing how publications drew on, resisted, and informed the ideals and visual forms of global modernism. Chapters take in the magazines of Australia, Europe and North America, as well as China, The Soviet Turkic states, and Mexico. With contributions from leading

international scholars, the book considers the pioneering developments in European and North American periodicals in the modernist period, whilst expanding the field of enquiry to take in the vibrant magazine cultures of east Asia and Latin America. The construction of these magazines' modern ideals was a complex, dialectical process: in dialogue with international modernism, but equally responsive to their local cultures, and the beliefs and expectations of their readers. Magazines and Modern Identities captures the diversity of these ideals, in periodicals that both embraced and criticised the globalised culture of the technological era.

Machine Learning in Java AshishSingh Bhatia,Bostjan Kaluza,2018-11-28 Leverage the power of Java and its associated machine learning libraries to build powerful predictive models Key FeaturesSolve predictive modeling problems using the most popular machine learning Java libraries Explore data processing, machine learning, and NLP concepts using JavaML, WEKA, MALLET librariesPractical examples, tips, and tricks to help you understand applied machine learning in JavaBook Description As the amount of data in the world continues to grow at an almost incomprehensible rate, being able to understand and process data is becoming a key differentiator for competitive organizations. Machine learning applications are everywhere, from self-driving cars, spam detection, document search, and trading strategies, to speech recognition. This makes machine learning well-suited to the present-day era of big data and Data Science. The main challenge is how to transform data into actionable knowledge. Machine Learning in Java will provide you with the techniques and tools you need. You will start by learning how to apply machine learning

methods to a variety of common tasks including classification, prediction, forecasting, market basket analysis, and clustering. The code in this book works for JDK 8 and above, the code is tested on JDK 11. Moving on, you will discover how to detect anomalies and fraud, and ways to perform activity recognition, image recognition, and text analysis. By the end of the book, you will have explored related web resources and technologies that will help you take your learning to the next level. By applying the most effective machine learning methods to real-world problems, you will gain hands-on experience that will transform the way you think about data. What you will learnDiscover key Java machine learning librariesImplement concepts such as classification, regression, and clusteringDevelop a customer retention strategy by predicting likely churn candidatesBuild a scalable recommendation engine with Apache MahoutApply machine learning to fraud, anomaly, and outlier detectionExperiment with deep learning concepts and algorithmsWrite your own activity recognition model for eHealth applicationsWho this book is for If you want to learn how to use Java's machine learning libraries to gain insight from your data, this book is for you. It will get you up and running quickly and provide you with the skills you need to successfully create, customize, and

deploy machine learning applications with ease. You should be familiar with Java programming and some basic data mining concepts to make the most of this book, but no prior experience with machine learning is required.

Machine Learning: End-to-End guide for Java developers Richard M. Reese,Jennifer L. Reese,Bostjan Kaluza,Dr. Uday Kamath,Krishna Choppella,2017-10-05 Develop, Implement and Tuneup your Machine Learning applications using the power of Java programming About This Book Detailed coverage on key machine learning topics with an emphasis on both theoretical and practical aspects Address predictive modeling problems using the most popular machine learning Java libraries A comprehensive course covering a wide spectrum of topics such as machine learning and natural language through practical use-cases Who This Book Is For This course is the right resource for anyone with some knowledge of Java programming who wants to get started with Data Science and Machine learning as quickly as possible. If you want to gain meaningful insights from big data and develop intelligent applications using Java, this course is also a must-have. What You Will Learn Understand key data analysis techniques centered around machine learning Implement Java APIs and

various techniques such as classification, clustering, anomaly detection, and more Master key Java machine learning libraries, their functionality, and various kinds of problems that can be addressed using each of them Apply machine learning to real-world data for fraud detection, recommendation engines, text classification, and human activity recognition Experiment with semi-supervised learning and stream-based data mining, building high-performing and real-time predictive models Develop intelligent systems centered around various domains such as security, Internet of Things, social networking, and more In Detail Machine Learning is one of the core area of Artificial Intelligence where computers are trained to self-learn, grow, change, and develop on their own without being explicitly programmed. In this course, we cover how Java is employed to build powerful machine learning models to address the problems being faced in the world of Data Science. The course demonstrates complex data extraction and statistical analysis techniques supported by Java, applying various machine learning methods, exploring machine learning sub-domains, and exploring real-world use cases such as recommendation systems, fraud detection, natural language processing, and more, using Java programming. The course begins

with an introduction to data science and basic data science tasks such as data collection, data cleaning, data analysis, and data visualization. The next section has a detailed overview of statistical techniques, covering machine learning, neural networks, and deep learning. The next couple of sections cover applying machine learning methods using Java to a variety of chores including classifying, predicting, forecasting, market basket analysis, clustering stream learning, active learning, semi-supervised learning, probabilistic graph modeling, text mining, and deep learning. The last section highlights real-world test cases such as performing activity recognition, developing image recognition, text classification, and anomaly detection. The course includes premium content from three of our most popular books: Java for Data Science Machine Learning in Java Mastering Java Machine Learning On completion of this course, you will understand various machine learning techniques, different machine learning java algorithms you can use to gain data insights, building data models to analyze larger complex data sets, and incubating applications using Java and machine learning algorithms in the field of artificial intelligence. Style and approach This comprehensive course proceeds from being a tutorial to a practical guide, providing an

introduction to machine learning and different machine learning techniques, exploring machine learning with Java libraries, and demonstrating real-world machine learning use cases using the Java platform.

Business Relationships that Last Ed Wallace,2009 Everyone knows that relationships are critical to business success, but no-one has provided a simple system to turn contacts and acquaintances into valuable assets -- until now. The first systematic program for advancing business relationships. In five easy-to-follow steps, the book shows how to transform any casual business relationship into a valuable source for revenue, leads, and advice. Ed Wallace combines memorable anecdotes with a clear theoretical framework that shows individuals how to leverage their hard business skills with the often-overlooked soft skills of rela-tionship building. Surveyed executives say they need this book. In a recent survey, 88 percent of executives indicated that the strength of their client, cus-tomer, and referral relationships was critical to achieving their goals each year. But only 25 percent of those same executives said they had a formal process for planning, managing, and growing business relation-ships and 73 percent of the group surveyed said they would be very interested in

reading a book on this topic. This book delivers the process that so many people and organisations need.

   Liespotting Pamela Meyer,2010-07-20 GET TO THE TRUTH People--friends, family members, work colleagues, salespeople--lie to us all the time. Daily, hourly, constantly. None of us is immune, and all of us are victims. According to studies by several different researchers, most of us encounter nearly 200 lies a day. Now there's something we can do about it. Pamela Meyer's Liespotting links three disciplines--facial recognition training, interrogation training, and a comprehensive survey of research in the field--into a specialized body of information developed specifically to help business leaders detect deception and get the information they need to successfully conduct their most important interactions and transactions. Some of the nation's leading business executives have learned to use these methods to root out lies in high stakes situations. Liespotting for the first time brings years of knowledge-- previously found only in the intelligence community, police training

academies, and universities--into the corporate boardroom, the manager's meeting, the job interview, the legal proceeding, and the deal negotiation. WHAT'S IN THE BOOK? Learn communication secrets previously known only to a handful of scientists, interrogators and intelligence specialists. Liespotting reveals what's hiding in plain sight in every business meeting, job interview and negotiation: - The single most dangerous facial expression to watch out for in business & personal relationships - 10 questions that get people to tell you anything - A simple 5-step method for spotting and stopping the lies told in nearly every high-stakes business negotiation and interview - Dozens of postures and facial expressions that should instantly put you on Red Alert for deception - The telltale phrases and verbal responses that separate truthful stories from deceitful ones - How to create a circle of advisers who will guarantee your success

Dominion from Sea to Sea Bruce Cumings,2009-11-17 America is the first world power to inhabit an immense land mass open at both ends to the world's two largest oceans—the Atlantic and the Pacific. This gives America a great competitive advantage often overlooked by Atlanticists, whose focus remains overwhelmingly fixed on America's relationship with Europe. Bruce

Cumings challenges the Atlanticist perspective in this innovative new history, arguing that relations with Asia influenced our history greatly. Cumings chronicles how the movement westward, from the Middle West to the Pacific, has shaped America's industrial, technological, military, and global rise to power. He unites domestic and international history, international relations, and political economy to demonstrate how technological change and sharp economic growth have created a truly bicoastal national economy that has led the world for more than a century. Cumings emphasizes the importance of American encounters with Mexico, the Philippines, and the nations of East Asia. The result is a wonderfully integrative history that advances a strong argument for a dual approach to American history incorporating both Atlanticist and Pacificist perspectives.

Circle of Greed Patrick Dillon,Carl Cannon,2011-04-12 Circle of Greed is the epic story of the rise and fall of Bill Lerach, once the leading class action lawyer in America and now a convicted felon. For more than two decades, Lerach threatened, shook down and sued top Fortune 500 companies, including Disney, Apple, Time Warner, and—most famously—Enron. Now, the man who brought corporate moguls to their knees has fallen prey to the same corrupt impulses of his enemies, and is paying the price by serving time in federal prison. If there was ever a modern Greek tragedy about a man and his times, about corporate arrogance and illusions and the scorched-earth tactics to not only counteract corporate America but to beat it at its own game, Bill Lerach's story is it.
