*Financial Terms Dictionary - Accounting Quick Reference Guide* Wesley Crowder, Thomas Herold, 2017-06-30 Understand Accounting Terms - Make Better Financial Decisions This practical financial dictionary for accounting terms helps you understand and comprehend most common accounting lingo. It was written with an emphasis to quickly grasp the context without using jargon. Each of the 90 financial accounting term is explained in detail and also gives practical examples. It is based on common usage as practiced by financial professionals. Compiled over the last 3 years from questions and feedback to financial articles published by the Wealth Building Course education program. Accounting Made Simple This book is useful if you are new to business and finance. It includes most accounting terms for businesses, investors and entrepreneurs. It also covers the lingo that was introduced in the financial crisis of 2008 until 2017. With the alphabetical order it makes it quick and easy to find what you are looking for. Example: What are Tax Exemptions? Tax exemptions are special monetary exemptions that decrease the amount of income which is taxable. This can take the form of full tax exempt status that delivers 100 percent relief from a certain form of taxes, partial tax on certain items, or reduced tax rates and bills. Tax exemption can refer to particular groups such as charitable outfits (who receive exemption from income taxes and property taxes), multi-jurisdictional businesses or individuals, and even military veterans. The phrase tax exemption is commonly utilized to refer to specific scenarios where the law lowers the amount of income that would fall under the taxable label otherwise. With the American Internal Revenue Service, there are two kinds of exemptions which are available to individuals. One example of a tax exemption concerns the decrease in taxes the IRS gives for any dependent children who are under age 18 (who actually live with the head of household income tax filer). For the year 2015, the Internal Revenue Service permitted individuals who were filing taxes to receive a \$4,000 exemption on every one of their permitted tax exemptions. This simply means that any individuals paying taxes who count on three permissible exemptions are able to deduct fully \$12,000 off of their taxable income level. In the cases where they make a higher amount than an IRS pre-determined threshold, the amount in tax exemptions which they are able to utilize becomes

phased out slowly and finally eliminated completely. For the tax year 2015, those individuals filing taxes who earned in excess of \$258,250, as well as those married filing jointly couples who earned more than \$309,900, received a lower amount for their exemptions. This complicated sliding scale with seemingly random numbers in place is all part of the reason why observers claim the American tax system is outdated and overly complex. There is an important caveat for individuals filing taxes. They can not claim their own personal exemption when someone else claims them as a dependent on their tax return. This is one of the elements that separate exemptions from deductions in the world of tax terminology. Each individual filing is permitted to claim his or her personal deduction. Looking at a real world example helps to clarify the complicated rules. Young college students who have a job while they go to school will typically be claimed by their parents like a dependent on the parents' income tax return. Note: This example description is shorted due to publish restrictions. Each term is explained with 600 words and more.

Example: What is Market Capitalization? Market capitalization refers to a company's total value. Analysts determine it by multiplying the number of shares in existence times the price of the stock. This concept can also be utilized to measure the full value of a stock exchange. The New York Stock Exchange market capitalization would equal the value of all publicly traded companies on the exchange added together. Market cap is another name for market capitalization. Examples of how this is figured make it easier to understand. Companies that have 2 million shares which have

been issued that sell for \$20 apiece have a market cap of \$40 million. If an investor had enough money and could get the stockholders to agree to sell their shares, he or she could purchase the company for \$40 million total. In practice many shareholders would want more than the current share price to sell their stock. There are three different main sizes of market capitalization among traded companies. These are large cap, mid cap, and small cap corporations. Large cap companies are generally considered the least risky ones in which to invest. They typically possess substantial financial resources to survive economic downturns. They are also generally leaders in their industries. This gives them a smaller amount of growth opportunity. Because of this the returns for these large cap companies are often not as spectacular as with successful companies in the other two categories. They also have a significantly greater chance of paying dividends out to their share holders. Large cap corporations have \$5 billion and higher capitalization. Mid cap companies are generally less risky than the smaller companies. They still do not have the same possibilities for aggressive growth. Mid cap companies commonly possess market capitalization of from \$1 billion to \$5 billion. Studies have shown that mid caps have outperformed large cap and small cap corporation stocks in the past 20 years. Small cap corporations are those which possess under \$1 billion in market capitalization. These tinier companies have often completed an Initial Public Offering in the recent past. Such companies are considered the riskiest of the three types. This is because in economic downturns, they have the greatest chance of failing or defaulting. They also enjoy plenty of opportunity and space to expand. This means that they potentially could be extremely profitable if they succeed. Example: What are Corporate Bonds? Corporate bonds are debt securities that a company issues and sells to investors. Such corporate bonds are generally backed by the company's ability to repay the loan. This money is anticipated to result from successful operations in the future time periods. With some corporate bonds, the physical assets of a company can be offered as bond collateral to ease investors' minds and any concerns about repayment. Corporate bonds are also known as debt financing. These bonds provide a significant capital source for a great number of businesses. Other sources of capital for the companies include lines of credit, bank loans, and equity issues like stock shares. For a business to be capable of achieving coupon rates that are favorable to them by issuing their debt to members of the public, a corporation will have to provide a series of consistent earnings reports and to show considerable earnings potential. As a general rule, the better a corporation's quality of credit is believed to be, the simpler it is for them to offer debt at lower rates and float greater amounts of such debt. Such corporate bonds are always issued in \$1,000 face value blocks.

Practically all of them come with a standardized structure for coupon payments. Some corporate bonds include what is known as a call provision. These provisions permit the corporation that issues them to recall the bonds early if interest rates change significantly. Every call provision will be specific to the given bond. These types of corporate bonds are deemed to be of greater risk than are government issued bonds. Because of this perceived additional risk, the interest rates almost always turn out to be higher with corporate bonds. This is true for companies whose credit is rated as among the best.

Regarding tax issues of corporate bonds, these are pretty straight forward. The majority of corporate bonds prove to be taxable, assuming that their terms are for longer than a single year. To avoid taxes until the end, some bonds come with zero coupons and redemption values that are high, meaning that taxes are deferred as capital gains until the end of the bond term. Such corporate debts that come due in under a year are generally referred to as commercial paper. Corporate bonds are commonly listed on the major exchanges and ECN's like MarketAxess and Bonds.com. Even though these bonds are

carried on the major exchanges, their trading does not mostly take place on them... Note: This example description is shorted due to publish restrictions. Each term is explained with 600 words and more.

Example: What is Market Sentiment? Market sentiment refers to the all around attitude investors have with regards to a certain financial market or specific security. It is the tone and feeling in a market. This is displayed via the price movement and activity of various securities which trade in a given market. Some have called it the market crowd psychology or investor sentiment. Rising prices in a market are indicative of bullish market sentiment, while declining prices indicate the sentiment in a market is bearish. What makes market sentiment so interesting is that it is sometimes not based on the underlying fundamentals of the security or market in question. At times it instead is based on emotion and greed rather than actual business valuations and fundamentals. This market sentiment matters immensely to both technical

analysts and to day traders. These individuals read technical indicators in order to measure shorter term price movements which the attitudes of investors can cause in a given security. They attempt to profit from these price fluctuations. Such sentiment also is important for contrarian investors. They prefer to place trades in the opposite direction of any prevailing sentiment. When all other investors are buying, a contrarian will use this sentiment to instead sell. In general, market sentiment is referred to as either bullish or bearish. As the bulls have control, the stock prices are running up and away. As the bears are dominant, prices of stocks are declining or even plunging. Since the markets are subject to and driven from the emotion of the collective traders, the sentiment of the markets is often not correlated to the underlying fundamental values. This means that market sentiment is more about group emotions and feelings while the fundamental value is more about the actual business performance. Traders realize profits when they find those stocks which are either undervalued or overvalued because of their market sentiment. Traders and investors alike utilize different indicators to attempt to ascertain what the sentiment of the markets actually is. This helps them to decide which stocks are the best ones for them to trade. There are a number of these helpful indicators. Among the more popular ones are the following: VIX CBOE Volatility Index, Bullish Percentage, 52 Weeks High to Low Sentiment Ratio, 200 Days Moving Average, and 50 Days Moving Average. Note: This example description is shorted due to publish restrictions. Each term is explained with 600 words and more.
