*Specific Interactions and the Miscibility of Polymer Blends* Michael M. Coleman,Paul C. Painter,John F. Graf,2017-11-13 This book with software provides powerful tools for the analysis, prediction and creation of new polymer blends, an area of significant commercial potential. The R&D approaches and methods described in the book have attracted the interest of polymer R&D leaders in industry, and have been put into use in several major chemical companies. The companion set of computer programs speeds and facilitates work in this area. FROM THE AUTHORS' PREFACE: During the 1980's a steadily increasing number of compatible systems [polymer blends] have been reported. We believe that miscible mixtures will prove to be fairly common and the purpose of this book is to explore the circumstances in which single phase materials can be obtained. We will also describe a model for the phase behavior of these mixtures which we believe to have a predictive value, or be used as a practical guide to polymer miscibility. Our approach is based on the use of association models which have until recently been largely ignored in treating hydrogen bonding in polymer mixtures. They have most frequently been applied to mixtures of alcohols with simple hydrocarbons, where the equilibrium constants used to describe association have most frequently been determined by a fit to thermodynamic data (e.g., vapor pressures, heat of mixing). In our work we have sought to, first, adapt this approach to a description of the phase behavior of polymer mixtures; second, develop spectroscopic methods that provide an independent measurement of the equilibrium constants. Our purpose in this book is to explore and describe this approach and illustrate its broad utility. We address two overlapping yet different audiences. One would be primarily interested in the broad nature of this approach and the practical applications of a simple model. The second would be more interested in the derivations of the equations and some of the fundamental aspects of the spectroscopy of these systems. Accor

**Home Winemaking For Dummies** Tim Patterson,2010-11-23 An informative, fun guide to making your own wine It's estimated that one million North Americans make their own wine. Relatively inexpensive to make (a homemade bottle costs from \$2 to \$4), a bottle with your own label (and grapes) is a fantasy even someone with modest aspirations can fulfill. Author Tim Patterson, an award-winning home winemaker, shows how it's possible for anyone to create a great wine. In Home Winemaking For Dummies, he discusses the art of winemaking from grape to bottle, including how to get the best grapes (and figure out how many you need); determine what equipment is required; select the right yeast and figure out if any other additives are needed; and store, age, and test wine. With detailed tips on creating many varieties -- from bold reds and demure whites to enchanting rosés and delightful sparkling wines -- this guide is your ultimate winemaking resource.

The book provides the practicing engineer with the tools necessary to evaluate the performance of existing agitation and mixing equipment, along with tactics on how to design new equipment using computerized rating and design methods. The most appropriate design techniques are also included in computer programs for solving mixing problems for the practicing engineer. Excel solutions are available through the WEB for 40 example problems in the book. WEB based, general purpose CalcEdge design programs are also available; the TK6 source codes are also available. Provides the practicing engineer with the tools necessary to evaluate the performance of existing equipment and to design new equipment using computerized rating and design methods Explains the principles required to understand and use recommended design methods Implements design methods that are readily available and easy-to-use Presents sufficient worked examples--using provided canned programs--to guide the user in analyzing and designing mixing equipment

Miscible Polymer Blends Michael M. Coleman,Paul C. Painter,2006-12 The accompanying CD-ROM contains a set of original programs that allow one to calculate solubility parameters, provide a guide to polymer

miscibility, and allow the calculation of the phase behavior of hydrogen-bonded polymer systems. The book is divided into two parts. In the first part, the authors describe the principles underlying the simple guide to polymer blend miscibility, which are the basis of the programs Miscibility Checker and Miscibility Guide. The second part is more rigorous and pertains to hydrogen bonded polymer blends and forms the basis of the program Phase Calculator.

**Smart Agriculture** Govind Singh Patel,Amrita Rai,Nripendra Narayan Das,R.P. Singh,2021-02-11 This book endeavours to highlight the untapped potential of Smart Agriculture for the innovation and expansion of the agriculture sector. The sector shall make incremental progress as it learns from associations between data over time through Artificial Intelligence, deep learning and Internet of Things applications. The farming industry and Smart agriculture develop from the stringent limits imposed by a farm's location, which in turn has a series of related effects with respect to supply chain management, food availability, biodiversity, farmers' decision-making and insurance, and environmental concerns among others. All of the above-mentioned aspects will derive substantial benefits from the implementation of a data-driven approach under the condition that the systems, tools and techniques to be used have been designed to handle the volume and variety of the data to be gathered. Contributions to this book have been solicited with the goal of uncovering the possibilities of engaging agriculture

with equipped and effective profound learning algorithms. Most agricultural research centres are already adopting Internet of Things for the monitoring of a wide range of farm services, and there are significant opportunities for agriculture administration through the effective implementation of Machine Learning, Deep Learning, Big Data and IoT structures.
