*A Structural Analysis of Complex Aerial Photographs* Makoto Nagao, Takashi Matsuyama, 1980-12-31 It is most appropriate that the first volume to appear in the series Advanced Applications in Pattern Recognition should be this monograph by Nagao and Matsuyama. The work described here is a deep unification and synthesis of the two fundamental approaches to pattern recognition: numerical (also known as statistical) and structural (linguistic, syntactic). The power and unity of the methodology flow from the apparently effortless and natural use of the knowledge-base framework illuminated by the best results of artificial intelligence research. An integral part of the work is the algorithmic solution of many hitherto incompletely or clumsily treated problems. It was on the occasion of a laboratory visit in connection with the 4th IJCPR (of which Professor Nagao was the very able Program Chairman) that I saw in operation the system described here. On the spot I expressed the desire to see the work described for the international technical audience in this series and the authors were kind enough to agree to contribute to a new and unknown series. With the publication of this monograph on the eve of the 5th IJCPR my wish is fulfilled. I want to thank here the authors and Plenum Publishing Corporation for making this volume and the series a reality.

The Phenomenology of Real and Virtual Places Taylor & Francis Group, 2021-06-30 This collection of essays explores the history, implications, and usefulness of phenomenology for the study of real and virtual places. While the influence of phenomenology on architecture and urban design has been widely acknowledged, its effect on the design of virtual places and environments has yet to be exposed to critical reflection. These essays from philosophers, cultural geographers, designers, architects, and archaeologists advance the connection between phenomenology and the study of place. The book features historical interpretations on this topic, as well as context-specific and place-centric applications that will appeal to a wide range of scholars across disciplinary boundaries. The ultimate aim of this book is to provide more helpful and precise definitions of phenomenology that shed light on its growth as a philosophical framework and on its development in other disciplines concerned with the experience of place.

**Warhol-isms** Andy Warhol, 2022-05-10 A unique collection of brilliant quotations from the legendary Pop artist One of the most influential artists of his time and ours, Andy Warhol is nearly as renowned for what he said as for what he did. Indeed, he is so quotable that things he never said are endlessly and plausibly attributed to him, including, fittingly, the most celebrated fake Warhol saying—"In the future, everyone will be world-famous for 15 minutes." Warhol-isms separates legend from fact to present a unique and comprehensive collection of authentic quotations from the Pop artist. Gathered from interviews and other primary sources, these deadpan, droll, ironic, and sincere gems—in which a superficial embrace of superficiality often disguises provocative, unconventional ideas—provide compelling insights into the life and work of an artist who has left an indelible mark on art and popular culture. Select quotations from the book: I think an artist is anybody who does something well. I went to [a psychiatrist] once, and he never called me back. They always say that time changes things, but you actually have to change them yourself. I've never met a person I couldn't call a beauty. New things are always better than old things. I'm still a commercial artist. I was always a commercial artist.

*Understanding Minecraft* Nate Garrelts, 2014-09-25 Since its official release in 2011, Minecraft has sold over 48 million copies across all gaming platforms. The premise of Minecraft is simple: destroy, collect, build and interact in a world made entirely of colored cubes. Unlike Lego blocks or other construction toys, Minecraft's digital play space allows for virtually limitless creation without the cost and limitations of physical building materials. Developer Mojang's generous policies toward modification and other uses of their intellectual property also engender enthusiasm and creativity from fans who make music, art and animation inspired by the software. The first essays in this collection cover Minecraft's origins, describing its relationship to other video games and

toys and examining the learning models implicit in its design. Later essays describe and theorize the various ways players interact with the software, which simultaneously presents them with structural constraints and limitless possibilities. **A Tale of Two Cats** Ayin Hillel, Shimri Elkanati, 2019-09-11 Once upon a time there were two cats: one black as tar, one white as snow. They are pals, but always squabble over which one is the prettier cat. One day their curiosity gets the best of them, and they jump into buckets of paint to change color—turning their whole world topsy turvy! After some playful chaos, they soon learn their lesson and rekindle their friendship. Ayin Hillel's bouncy rhymes and Shimrit Elkanati's endearingly cute drawings combine to tell a charming tale of friendship and folly. Interactive Task Learning Kevin A. Gluck, John E. Laird, 2019-08-16 Experts from a range of disciplines explore how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. Humans are not limited to a fixed set of innate or preprogrammed tasks. We learn quickly through language and other forms of natural interaction, and we improve our performance and teach others what we have learned. Understanding the mechanisms that underlie the acquisition of new tasks through natural interaction is an ongoing challenge. Advances in artificial intelligence, cognitive science, and robotics are leading us to future systems with human-like capabilities. A huge gap exists, however, between the highly specialized niche capabilities of current machine learning systems and the generality, flexibility, and in situ robustness of human instruction and learning. Drawing on expertise from multiple disciplines, this Strüngmann Forum Report explores how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. The contributors consider functional knowledge requirements, the ontology of interactive task learning, and the representation of task knowledge at multiple levels of abstraction. They explore natural forms of interactions among humans as well as the use of interaction to teach robots and software agents new tasks in complex, dynamic environments. They discuss research challenges and opportunities, including ethical considerations, and make proposals to further understanding of interactive task learning and create new capabilities in assistive robotics, healthcare, education, training, and gaming.
