## **Web Information Systems and Technologies**

Joaquim Filipe, José Cordeiro, 2008-07-12 This book contains the best papers from the International Conference on Web Information Systems and Technologies (WEBIST 2007), organized by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), endorsed by IW3C2, and held in Barcelona, Spain. The purpose of WEBIST is to bring together researchers, engineers, and practitioners interested in the technological advances and business applications of web-based information systems. It has four main topic areas, covering different aspects of web information systems, namely, internet technology; web interfaces and applications; society, e-business and e-government; and e-learning. WEBIST 2007 received 367 submissions from more than 50 countries across all continents. After a double-blind review process, with the help of more than 200 - perts from the international program committee, and also after presentation at the conference, 23 papers were finally selected. Their extended and revised versions are published in this book. This strict selection made the conference appealing to a global audience of engineers, scientists, business practitioners, and policy experts. The - pers accepted and presented at the conference demonstrated a number of new and innovative solutions for e-business and web information systems in general, showing that the technical problems in this field are challenging and worth further R&D effort. The program of this conference also included three outstanding keynote lectures presented by internationally renowned distinguished researchers. Their keynote speeches reinforced the overall quality of the event.

**Multilingualism from Manuscript to 3D** Matylda Włodarczyk, Jukka Tyrkkö, Elżbieta Adamczyk, 2023-01-24  
This collection explores the links between multimodality and multilingualism, charting the interplay between languages, channels and forms of communication in multilingual written texts from historical manuscripts through to the new media of today and the non-verbal associations they evoke. The volume argues that features of written texts such as graphics, layout, boundary marking and typography are inseparable from verbal content. Taken together, the chapters adopt a systematic historical perspective to investigate this interplay over time and highlight the ways in which the two disciplines might further inform one another in the future as new technologies emerge. The first half of the volume considers texts where semiotic resources are the sites of modes, where multiple linguistic codes interact on the page and generate extralinguistic associations through visual features and spatial organisation. The second half of the book looks at texts where this interface occurs not in the text but rather in the cultural practices involved in social materiality and text transmission. Enhancing our understandings of multimodal resources in both historical and contemporary communication, this book will be of interest to scholars in multimodality, multilingualism, historical communication, discourse analysis and cultural studies. Chapters 1, 4, and 5 of this book are available for free in PDF format as Open Access from the individual product page at [www.routledge.com](http://www.routledge.com). Chapters 1 & 4 have

been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license, with Chapter 5 being made available under a Creative Commons Attribution 4.0 license.

**3D Printing** John M. Jordan, 2019-03-12 An accessible introduction to 3D printing that outlines the additive manufacturing process, industrial and household markets, and emerging uses. The use of 3D printing—digitally controlled additive manufacturing—is growing rapidly. Consumer models of 3D printers allow people to fabricate small plastic objects, from cabinet knobs to wedding cake toppers. Industrial uses are becoming widespread, as businesses use the technology to fabricate prototypes, spare parts, custom-fitted prosthetics, and other plastic or metal items, often at lower cost and with greater efficiency than standard manufacturing. In this volume in the MIT Press Essential Knowledge series, John Jordan offers an accessible introduction to 3D printing, describing the printing process, industrial and household markets, and emerging uses. Jordan outlines the stages of 3D printing, from idea to software model to a printable file that slices the planned object into printable layers to the finished object itself. He describes additive technologies, consumer

3D printing in homes and schools, mass customization (which can create tens of millions of unique items), and industrial uses. Jordan explains that although 3D printers have not become the ubiquitous home appliance once predicted, they are making inroads into mass markets; and he discusses the business factors that may hinder industry adoption of 3D printing technologies. He considers the possible unintended consequences of 3D printing on jobs, as companies scramble to find employees with an uncommon skill set; on business models and supply chains, as manufacturing is decentralized; and on patent law, as machines can be programmed to copy protected property. Finally, Jordan looks at new and emerging uses, including bioprinting, building construction, and micromachines.

Cristina Corsi, Božidar Slapšak, Frank

Vermeulen, 2013-12-11 This volume represents the most important “deliverable” of the European-funded project Radio-Past ([www.radiopast.eu](http://www.radiopast.eu)). It is intended to disseminate the key results achieved in the form of methodological guidelines for the application of non-destructive approaches in order to understand, visualize and manage complex archaeological sites, in particular large multi-period settlements whose remains are still mostly buried. The authors were selected from among the project research “staff” but also from among leading international specialists who served as speakers at the two international events organized in the framework of the project (the Valle Giulia Colloquium of Rome - 2009 and the Colloquium of Ghent - 2013) and at the three Specialization Fora, the high formation training activities organized in 2010, 2011 and 2012. As such, the book offers

contributions on diverse aspects of the research process (data capture, data management, data elaboration, data visualization and site management), presenting the state of the art and drafting guidelines for good practice in each field.
