Effects of Moderate Blood Alcohol Levels on Automobile Passing Behavior William O. Light,Charles G. Keiper,1971
Sixteen clinically normal individuals .drove in an optical driving simulator in both a non-alcohol and an alcohol condition. In both the 0 mg% (.00%) and the 90 mg% (.09%) blood alcohol level conditions, each subject was given 60 trials in which he was required to make and execute a decision to pass or to continue following a lead car. Times available to safely complete a pass and vehicle speeds were presented in a random manner. During the alcohol condition, subjects not only attempted and completed significantly more passes but also experienced more accidents. Results of this experiment suggest that the effects of moderate levels of blood alcohol must be examined not only as they affect perceptual motor skills, but also as they may more subtly affect risk-taking behavior and decision processes involved in operating a motor vehicle.

Effects of Moderate Blood Alcohol Levels on Driver Alertness Charles G. Keyser,1972 In this study of the effects of moderate blood alcohol levels (65 mg.%= .065%) on driver alertness, clinically normal individuals drove in an optical driving simulator for uninterrupted periods of 2 hours. During the alcohol session, subjects exhibited significantly slower reaction times, and indicated additional deleterious effects of the alcohol upon performance capacity. Results of this study suggest that the effects of moderate levels of blood alcohol must be examined not only as they affect simple perceptual-motor skills, but also as they may more subtly affect time-sharing capabilities and the various complex decision-reaction processes involved in operating a motor vehicle.

Traffic Safety and the Driver Leonard Evans,1991 Examines deaths, injuries, and property damage from traffic crashes. Evans (research scientist, General Motors Research Labs, Warren, Michigan) applies the methods of science to illuminate the characteristics of these problems--their origin and nature as well as their severity. Blood Alcohol, Breath Alcohol, Impairment and the Law Alfred W. O'Daire,2009-03-19 This is a text that explains the science behind DUI detection, and the Scientific basis behind field sobriety testing, how it should be used, and the good, the bad, and the ugly about Evidential Breath testing and it's application in determining blood alcohol levels. It is not appropriate to simply accept the Evidential Breath test as cut and dry evidence of impairment in any criminal legal case. Any conviction should be based on a totality of evidence and not based on any one part of the entire process. This concise text includes the necessary information to understand all aspects of determination of impairment. Alcohol affects more people than any other drug in society today. The information provided in this text puts everything needed to make informed, appropriate decisions about drinking in one place. There is no longer the need to search out individual topics related to alcohol use--all the information you may need is at your fingertips with this one single volume.

The Alcohol Hangover Joris C Verster,Lizanne Arnoldy,Sarah Benson,Andrew Scholey,2021-03-05 The seeds and fruits (or their parts) of Iberoamerican crops have high nutritional and functional properties which could be utilized in a wide range of foods. The crops included in this book are amaranth (*Amaranthus* spp.), quinoa (*Chenopodium quinoa*), kañiwa (*Chenopodium pallidicaule*), chia (*Salvia hispanica* L.), Andean maize (*Zea mays* L.), moringa (*Moringa oleifera*), yvapura (*Plinia peruviana*), kurugua (*Sicana odorifera*), sacha inchi (*Plukenetia huayllabambana*), camu camu (*Myrciaria dubia*), mango (*Mangifera indica*), tarwi (*Lupinus mutabilis*), peanut (*Arachis hypogaea* L.) and taro (*Colocasia esculenta*), all of them still underutilized. Their cultivation is low; nevertheless, in recent years, the worldwide demand for some of them has increased immensely, resulting in an increase in their production. The ancient Iberoamerican crops have been widely recognized for their nutritional value by food scientists and food producers because they contain high-quality proteins and large quantities of micronutrients such as minerals, vitamins and bioactive compounds. In addition, they are gluten-free, which makes them suitable for people suffering from various gluten intolerances. This book summarizes the large amount of investigations in this field in the last year and provides knowledge within all the relevant areas of food science. The editors hope that this book will contribute to an increased use of these products in human nutrition by consumers worldwide.
