Blow-up Michelangelo Antonioni,Bronwen Saunders,2014 Blow Up, the 1966 cult film, can also be regarded as an excursion in photography. On a futile search for evidence of a crime he thought he has seen, Thomas, a fashion photographer, enlarges his pictures, pushing the envelope of the medium's boundaries. Michelangelo Antonioni's milestone in film history revolves around the issue of how much truth exists in perception, inquires into the ways that media reproductions can be manipulated.This publication examines Blow Up from a photographic perspective, investigating in detail the photographic and art-historical stances presented in the film as well as the genres it represents. The stylistic devices discussed range from social reportage, fashion photography, and Pop Art to abstract photography--and how, incidentally, Antonioni discovers soft focus as an artistic device. (German edition ISBN 978-3-7757-3736-4) Exhibition schedule: Albertina, Vienna April 30-August 24, 2014 - Fotomuseum Winterthur September 13-November 30, 2014 - C/O Berlin December 13, 2014-March 8, 2015

Antonioni's Blow-up Philippe Garner,David Mellor,2010 Michelangelo Antonioni's 1966 film Blow-Up is a masterfully constructed and paced exploration of the enigmas that challenge our interpretations of both the moving and the still image. Photography plays a key role at the very core of the film, providing the metaphorical site for the director's questioning of the relationship between reality and perceptions. This book provides a fresh and stimulating study of Antonioni's masterpiece. It reassembles and re-tells - through onset stills and the original blow-ups - the film's key narrative and pictorial strands in a focused visual investigation that is complemented by the authors' analytical essays. These texts draw on new research and effectively situate the film in the social and creative contexts that informed Antonioni's screenplay and art direction - on the one hand through an account of the milieu of fashionable photographers and models and the media through which they became so vivid a phenomenon, and on the other hand through the revelation of the artistic and literary reference points that so pervasively enrich the film.

How to Blow Up a Pipeline Andreas Malm,2021-01-05 Property will cost us the earth The science on climate change has been clear for a very long time now. Yet despite decades of appeals, mass street protests, petition campaigns, and peaceful demonstrations, we are still facing a booming fossil fuel industry, rising seas, rising emission levels, and a rising temperature. With the stakes so high, why haven't we moved beyond peaceful protest? In this lyrical manifesto, noted climate scholar (and saboteur of SUV tires and coal mines) Andreas Malm makes an impassioned call for the climate movement to escalate its tactics in the face of ecological collapse. We need, he argues, to force fossil fuel extraction to stop--with our actions, with our bodies, and by defusing and destroying its tools. We need, in short, to start blowing up some oil pipelines. Offering a counter-history of how mass popular change has occurred, from the democratic revolutions overthrowing dictators to the movement against apartheid and for women's suffrage, Malm argues that the strategic acceptance of property destruction and violence has been the only route for revolutionary change. In a braided narrative that moves from the forests of Germany and the streets of London to the deserts of Iraq, Malm offers us an incisive discussion of the politics and ethics of pacifism and violence, democracy and social change, strategy and tactics, and a movement compelled by both the heart and the mind. Here is how we fight in a world on fire.

Blow-up Theories for Semilinear Parabolic Equations Bei Hu,2011-03-23 There is an enormous amount of work in the literature about the blow-up behavior of evolution equations. It is our intention to introduce the theory by emphasizing the methods while seeking to avoid massive technical computations. To reach this goal, we use the simplest equation to illustrate the methods; these methods very often apply to more general equations.

The Films of Michelangelo Antonioni Peter Brunette,1998-09-28 An analysis of the life and work of the Italian director, Michelangelo Antonioni.

Blow-up and Other Exaggerations David Hemmings,2004 In 1967 Antonioni's 'Blow Up' was received by stunned audiences across the world. It was one of the most beautiful and enigmatic pictures to capture the zeitgeist and by the end of '60s, David Hemmings who played the central role, was one of the biggest movie stars in the world. From ordinary beginnings, with a doting mother and a father bitterly determined to see his son succeed where he had failed, Hemmings was launched early into an extraordinary life at the age of 12, when he was picked by Benjamin Britten to sing in his new operatic version of 'The Turn of the Screw'. Becoming something of a muse to Britten, a normal life was impossible and, going on to stage school in London, David was soon appearing regularly on films and television. His relationship with his father though, had deteriorated beyond repair, and he was left to look after himself. Hemmings's career spanned 50 years, from a quintessentially charismatic icon of the swinging sixties, to a hugely influential television director and producer, of the 'A-Team', 'Quantum Leap' and 'Airwolf', among others.The book has a 16 page plate section of exclusive colour and black and white photos from the family album, as well as previously unseen pictures from friends. Anecdotes from the sets of films from 'Barbarella' and 'Blow Up' to 'Gladiator' and 'Gangs of New York', and insights into Hollywood and the lives of his numerous famous friends and acquaintances make this the essential reference to one of Britain's most accomplished actors.

A Stability Technique for Evolution Partial Differential Equations Victor A. Galaktionov,Juan Luis Vázquez,2012-12-06 * Introduces a state-of-the-art method for the study of the asymptotic behavior of solutions to evolution partial differential equations. * Written by established mathematicians at the forefront of their field, this blend of delicate analysis and broad application is ideal for a course or seminar in asymptotic analysis and nonlinear PDEs. * Well-organized text with detailed index and bibliography, suitable as a course text or reference volume.

Blow-Up Julio Cortazar,2014-08-05 A young girl spends her summer vacation in a country house where a tiger roams . . . A man reading a mystery finds out too late that he is the murderer's intended victim . . . Originally published in hardcover as End of the Game and Other Stories, the fifteen stories collected here—including “Blow-Up,” which was the basis for Michelangelo Antonioni's film of the same name—shows Julio Cortázar's nimble capacity to explore the shadowy realm where the everyday meets the mysterious, perhaps even the terrible.

Balloon Blow-Up Franklin W. Dixon,2013-12-03 Joe and Frank Hardy win a contest to be handlers for a Green Crawler balloon in the annual fall festival, but when the balloon is sabotaged the day before the parade, the brothers must investigate.

The Last London Iain Sinclair,2017-09-07 A New Statesman Book of the Year London. A city apart. Inimitable. Or so it once seemed. Spiralling from the outer limits of the Overground to the pinnacle of the Shard, Iain Sinclair encounters a metropolis stretched beyond recognition. The vestiges of secret tunnels, the ghosts of saints and lost poets lie buried by developments, the cycling revolution and Brexit. An electrifying final odyssey, The Last London is an unforgettable vision of the Big Smoke before it disappears into the air of memory.

The Classical Stefan Problem S.C. Gupta,2017-07-27 The Classical Stefan Problem: Basic Concepts, Modelling and Analysis with Quasi-Analytical Solutions and Methods, New Edition, provides the fundamental theory, concepts, modeling, and analysis of the physical, mathematical, thermodynamical, and metallurgical properties of classical Stefan and Stefan-like problems as applied to heat transfer problems with phase-changes, such as from liquid to solid. This

self-contained work reports and derives the results from tensor analysis, differential geometry, non-equilibrium thermodynamics, physics, and functional analysis, and is thoroughly enriched with many appropriate references for in-depth background reading on theorems. Each chapter in this fully revised and updated edition begins with basic concepts and objectives, also including direction on how the subject matter was developed. It contains more than 400 pages of new material on quasi-analytical solutions and methods of classical Stefan and Stefan-like problems. The book aims to bridge the gap between the theoretical and solution aspects of the afore-mentioned problems. Provides both the phenomenology and mathematics of Stefan problems Bridges physics and mathematics in a concrete and readable manner Presents well-organized chapters that start with proper definitions followed by explanations and references for further reading Includes both numerical and quasi-analytical solutions and methods of classical Stefan and Stefan-like problems

Blow-Up in Quasilinear Parabolic Equations A. A. Samarskii, Victor a. Galaktionov, Sergey p. Kurdyumov, A. P. Mikhailov, 2011-06-24 The aim of the series is to present new and important developments in pure and applied mathematics. Well established in the community over two decades, it offers a large library of mathematics including several important classics. The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question. In addition, they convey their relationships to other parts of mathematics. The series is addressed to advanced readers wishing to thoroughly study the topic. Editorial Board Lev Birbrair, Universidade Federal do Ceará, Fortaleza, Brasil Walter D. Automata, Languages and Programming Michele Bugliesi, Bart Preneel, Vladimiro Sassone, Ingo Wegener, 2006-06-30 The two-volume set LNCS 4051 and LNCS 4052 constitutes the refereed proceedings of the 33rd International Colloquium on Automata, Languages and Programming, ICALP 2006, held in Venice, Italy, July 2006. In all, these volumes present more 100 papers and lectures. Volume II (4052) presents 2 invited papers and 2 additional conference tracks with 24 papers each, focusing on algorithms, automata, complexity and games as well as on security and cryptography foundation.

Blow-up in Nonlinear Sobolev Type Equations A. B. Al'shin, M. O. Korpusov, Aleksei Georgievich Sveshnikov, 2011 The monograph is devoted to the study of initial-boundary-value problems for multi-dimensional Sobolev-type equations over bounded domains. The authors consider both specific initial-boundary-value problems and abstract Cauchy problems for first-order (in the time variable) differential equations with nonlinear operator coefficients with respect to spatial variables. The main aim of the monograph is to obtain sufficient conditions for global (in time) solvability, to obtain sufficient conditions for blow-up of solutions at finite time, and to derive upper and lower estimates for the blow-up time. The abstract results apply to a large variety of problems. Thus, the well-known Benjamin-Bona-Mahony-Burgers equation and Rosenau-Burgers equations with sources and many other physical problems are considered as examples. Moreover, the method proposed for studying blow-up phenomena for nonlinear Sobolev-type equations is applied to equations which play an important role in physics. For instance, several examples describe different electrical breakdown mechanisms in crystal semiconductors, as well as the breakdown in the presence of sources of free charges in a self-consistent electric field. The monograph contains a vast list of references (440 items) and gives an overall view of the contemporary state-of-the-art of the mathematical modeling of various important problems arising in physics. Since the list of references contains many papers which have been published previously only in Russian research journals, it may also serve as a guide to the Russian literature.

The Atheist's Primer Malcolm Murray, 2010-04-06 The Athiest's Primer is a concise but wide-ranging introduction to a variety of arguments, concepts, and issues pertaining to belief in God. In lucid and engaging prose, Malcom Murray offers a penetrating yet fair-minded critique of the traditional arguments for the existence of God. He then explores a number of other important issues relevant to religious belief, such as the problem of suffering and the relationship between religion and morality, in each case arguing that atheism is preferable to theism. The book will appeal to both students and professionals in the philosophy of religion, as well as general audiences interested in the topic.

On Stability of Type II Blow Up for the Critical Nonlinear Wave Equation in \mathbb{R}^{3+1} Joachim K Krieger, 2021-02-10 The author shows that the finite time type II blow up solutions for the energy critical nonlinear wave equation $\Box u = -u^5$ on \mathbb{R}^{3+1} constructed in Krieger, Schlag, and Tataru (2009) and Krieger and Schlag (2014) are stable along a co-dimension three manifold of radial data perturbations in a suitable topology, provided the scaling parameter $\lambda(t) = t^{-1-\nu}$ is sufficiently close to the self-similar rate, i. e. $\nu > 0$ is sufficiently small. Our method is based on Fourier techniques adapted to time dependent wave operators of the form $\partial_t^2 + \partial_r^2 + \frac{2r}{\lambda(t)} \partial_r + V(\lambda(t)r)$ for suitable monotone scaling parameters $\lambda(t)$ and potentials $V(r)$ with a resonance at zero.
