Mariners Weather Log ,2000 Mariners Weather Log contains articles, news and information about marine weather events and phenomenon, storms at sea, weather forecasting, the NWS Voluntary Observing Ship (VOS) Program, Port Meteorological Officers (PMOs), cooperating ships officers, and their vessels. It provides meteorological information to the maritime community, and contains a comprehensive chronicle on marine weather. It recognizes ships officers for their efforts as voluntary weather observers, and allows NWS to maintain contact with and communicate with over 10,000 shipboard observers (ships officers) in the merchant marine, NOAA Corps, Coast Guard, Navy, etc.

Cultural Histories, Memories and Extreme Weather Georgina H. Endfield,Lucy Veale,2017-07-28 Extreme weather events, such as droughts, strong winds and storms, flash floods and extreme heat and cold, are among the most destructive yet fascinating aspects of climate variability. Historical records and memories charting the impacts and responses to such events are a crucial component of any research that seeks to understand the nature of events that might take place in the future. Yet all such events need to be situated for their implications to be understood. This book is the first to explore the cultural contingency of extreme and unusual weather events and the ways in which they are recalled, recorded or forgotten. It illustrates how geographical context, particular physical conditions, an area's social and economic activities and embedded cultural knowledges and infrastructures all affect community experiences of and responses to unusual weather. Contributions refer to varied methods of remembering and recording weather and how these act to curate, recycle and transmit extreme events across generations and into the future. With international case studies, from both land and sea, the book explores how and why particular weather events become inscribed into the fabric of communities and contribute to community change in different historical and cultural contexts. This is valuable reading for students and researchers interested in historical and cultural geography, environmental anthropology and environmental studies.

Air Pollution Modeling and its Application XIV Sven-Erik Gryning,Francis A. Schiermeier,2007-05-08 Proceedings of the Millennium NATO/CCMS International Technical Meeting on Air Pollution Modeling and its Application, held May 15-19 in Boulder, Colorado. This volume is the latest in a series of proceedings dating back to 1971. The book addresses the problem of air pollution and reports the latest findings and developments in air pollution modeling, from a truly international list of contributors.

Adapting Agriculture to Climate Change Chris Stokes,Mark Howden,2010-02-15 Adapting Agriculture to Climate Change is a fundamental resource for primary industry professionals, land managers, policy makers, researchers and students involved in preparing Australia's primary industries for the challenges and opportunities of climate change. More than 30 authors have contributed to this book, which moves beyond describing the causes and consequences of climate change to providing options for people to work towards adaptation action. Climate change implications and adaptation options are given for the key Australian primary industries of horticulture,

forestry, grains, rice, sugarcane, cotton, viticulture, broadacre grazing, intensive livestock industries, marine fisheries, and aquaculture and water resources. Case studies demonstrate the options for each industry. *Adapting Agriculture to Climate Change* summarises updated climate change scenarios for Australia with the latest climate science. It includes chapters on socio-economic and institutional considerations for adapting to climate change, greenhouse gas emissions sources and sinks, as well as risks and priorities for the future.

Climate Change and Anthropos Linda H. Connor, 2016-02-05 *Anthropos*, in the sense of species as well as cultures and ethics, locates humans as part of much larger orders of existence – fundamental when thinking about climate change. This book offers a new way of exploring the significance of locality and lives in the epoch of the Anthropocene, a time when humans confront the limits of our control over nature. Many scholars now write about the ethics, policies and politics of climate change, focussing on global processes and effects. The book's innovative approach to cross-cultural comparison and a regionally based study explores people's experiences of environmental change and the meaning of climate change for diverse human worlds in a changing biosphere. The main study site is the Hunter Valley in southeast Australia: an ecological region defined by the Hunter River catchment; a dwelling place for many generations of people; and a key location for transnational corporations focussed on the mining, burning and export of black coal. Abundant fossil fuel reserves tie Hunter people and places to the Asia Pacific – the engine room of global economic growth in the twenty-first century and the largest user of the planet's natural resources. The book analyses the nexus of place and perceptions, political economy and social organisation in situations where environmental changes are radically transforming collective worlds. Based on an anthropological approach informed by other ways of thinking about environment-people relationships, this book analyses the social and cultural dimensions of climate change holistically. Each chapter links the large scales of species and planet with small places, commodity chains, local actions, myths and values, as well as the mingled strands of dystopian imaginings and strivings for recuperative renewal in an era of transition.

The Hawkesbury River Paul Boon, 2017-07-01 The Hawkesbury River is the longest coastal river in New South Wales. A vital source of water and food, it has a long Aboriginal history and was critical for the survival of the early British colony at Sydney. The Hawkesbury's weathered shores, cliffs and fertile plains have inspired generations of artists. It is surrounded by an unparalleled mosaic of national parks, including the second-oldest national park in Australia, Ku-ring-gai National Park. Although it lies only 35 km north of Sydney, to many today the Hawkesbury is a 'hidden river' – its historical and natural significance not understood or appreciated. Until now, the Hawkesbury has lacked an up-to-date and comprehensive book describing how and when the river formed, how it functions ecologically, how it has influenced humans and their patterns of settlement and, in turn, how it has been affected by those settlements and their people. *The Hawkesbury River: A Social and Natural History* fills this gap. With chapters on the geography, geology, hydrology and ecology of the river through to discussion of its use by Aboriginal and European people and its role in transport, defence and culture, this highly readable and richly illustrated book paints a picture of

a landscape worthy of protection and conservation. It will be of value to those who live, visit or work in the region, those interested in Australian environmental history, and professionals in biology, natural resource management and education.

Geographies of Comfort Danny McNally, Laura Price, Philip Crang, 2020-12-29 Bringing together conceptual and empirical research from leading thinkers, this book critically examines 'comfort' in everyday life in an era of continually occurring social, political and environmental changes. Comfort and discomfort have assumed a central position in a range of works examining the relations between place and emotion, the senses, affect and materiality. This book argues that the emergence of this theme reflects how questions of comfort intersect humanistic, cultural-political and materialist registers of understanding the world. It highlights how geographies of comfort becomes a timely concern for Human Geography after its cultural, emotional and affective aspects. More specifically, comfort has become a vital theme for work on mobilities, home, environment and environmentalism, sociability in public space and the body. 'Comfort' is recognized as more than just a sensory experience through which we understand the world; its presence, absence and pursuit actively make and un-make the world. In light of this recognition, this book engages deeply with 'comfort' as both an analytic approach and an object of analysis. This book offers international and interdisciplinary perspectives that deploys the lens of comfort to make sense of the textures of everyday life in a variety of geographical contexts. It will appeal to those working in human geography, anthropology, feminist theory, cultural studies and sociology.

Urban Resilience to Droughts and Floods Cecilia Tortajada, James Horne, Larry Wallace Harrington, 2020-05-21 This book focuses on policies and governance on how to build the resilience of cities to droughts and floods in the short-, medium-, and long-term. There are discussions on how cities prepare for, cope with, learn from, manage, and recover from these extreme events. The chapters also consider aspects such as changing paradigms, policy responses under uncertainty, scenario development, institutional responses, adaptive forecasting, governance perspectives, infrastructure development, overall investments, and technological innovation. The Sustainable Development Goals (SDGs) and the Sendai Framework for Disaster Risk Reduction are discussed at length. Most of the cities and regions studied are in Asia, however, cities from Oceania, Europe, Africa, and North America are also included. Analyses are not limited to cities but to the basins and regions from which urban populations obtain their resources, and on which their resilience depends. This book was originally published as a special issue of the International Journal of Water Resources Development.

Natural Disasters and Adaptation to Climate Change Sarah Boulter, Jean Palutikof, David John Karoly, Daniela Guitart, 2013-10-14 Eighteen case studies of worldwide natural disasters are used to inform actual climate change adaptation practice for researchers and decision makers.

Murray-Darling Basin, Australia Barry Hart, Neil Byron, Nick Bond, Carmel Pollino, Michael Stewardson, 2020-10-23 Murray-Darling Basin, Australia: Its Future Management is a much-needed text for water resources managers, water, catchment, estuarine and coastal scientists, and aquatic ecologists. The book

first provides a summary of the Murray-Darling River system: its hydrology, water-related ecological assets, land uses (particularly irrigation), and its rural and regional communities; and management within the Basin, including catchments and natural resources, water resources, irrigation, environment, and monitoring and evaluation. Additionally, the recent major water reforms in the Basin are discussed, with a focus particularly on the development and implementation of the Basin Plan. *Murray-Darling Basin, Australia: Its Future Management* then provides an analysis of the next set of policy and institutional reforms (environmental, social, cultural and economic) needed to ensure the Basin is managed as an integrated system (including its water resources, catchment and estuary) capable of adapting to future changes. Six major challenges facing the Basin are identified and discussed, particularly within the context of predicted changes to the climate leading to an increased frequency of drought and a hotter and dryer future. Finally, a 'road map' or 'blueprint' to achieve more integrated management of the Basin is provided, together with some 'key lessons' of relevance to others involved in the management of multijurisdictional river Basins. Provides a consolidated account of the Murray-Darling Basin system; an area of global relevance to those interested in rebalancing river systems where the water resources have been over allocated Offers a detailed analysis of the current system and its management, with a focus on water and ecosystem management Discusses a number of key challenges, particularly those related to climate change, facing future reforms to the Murray-Darling Basin Plan Provides a blueprint for changes needed to ensure the Basin is managed as an integrated whole (from catchment to coast)

Senior Australian Agriculture Anne Clark, 2003 Completely revised providing up-to-date figures, graphs, statistics and the latest agricultural developments. It is directed towards the NSW course but suits all senior agriculture courses in Australia. Encourages students to take an enquiry-based approach to learning and provides activities, Internet sites and extension activities.

Climate Alert Yuzhu You, Ann Henderson-Sellers, 2010 Climate change is particularly visible in Australia with globally recognised icons, such as the Great Barrier Reef, the Murray-Darling River, Antarctica and the surrounding oceans, all deeply vulnerable and already under attack. As a nation with a rich environmental heritage our response to climate change, as individuals and policymakers, relies on an accurate understanding of the current state and evidence of intervention efficacy. *Climate Alert* presents scholarly research on climate change monitoring and strategy. It covers a diverse range of today's issues and seeks to promote climate change monitoring as an essential tool in both effective mitigation and urgent adaptation.

Evidence-Based Climate Science Don Easterbrook, 2016-09-16 Evidence-Based Climate Science: Data Opposing CO2 Emissions as the Primary Source of Global Warming, Second Edition, includes updated data related to the causes of

global climate change from experts in meteorology, geology, atmospheric physics, solar physics, geophysics, climatology, and computer modeling. This book objectively gathers and analyzes scientific data concerning patterns of past climate changes, influences of changes in ocean temperatures, the effect of solar variation on global climate, and the effect of CO₂ on global climate. This analysis is then presented as counter-evidence to the theory that CO₂ is the primary cause behind global warming. Increasingly, scientists are pointing to data which suggests that climate changes are a result of natural cycles, which have been occurring for thousands of years. Unfortunately, global warming has moved into the political realm without enough peer-reviewed research to fully validate and exclude other, more natural, causes of climate change. For example, there is an absence of any physical evidence that CO₂ causes global warming, so the only argument for CO₂ as the cause of warming rests entirely in computer modeling. Thus, the question becomes, how accurate are the computer models in predicting climate? What other variables could be missing from the models? In order to understand modern climate changes, we need to look at the past history of climate changes. Vast amounts of physical evidence of climate change over the past centuries and millennia have been gathered by scientists. Significant climate changes have clearly been going on for many thousands of years, long before the recent rise in atmospheric CO₂. Evidence-Based Climate Science, Data Opposing CO₂ Emissions as the Primary Source of Global Warming, Second Edition, documents past climate changes and presents physical evidence for possible causes. Provides scientific evidence for issues related to global climate change that is not readily available elsewhere Offers detailed analysis of temperature measurements with the goal of helping readers to understand conflicting claims about global warming heard every day in the news media Presents real-time data on polar ice Presents the real-time effect of CO₂ on global warming, rather than forecasts based on computer models
