Evolutionary Governance Theory Kristof van Assche,Raoul Beunen,Martijn

Duineveld,2013-07-26 This short books offers the reader a remarkable new perspective on the way markets, laws and societies evolve together. It can be of use to anyone interested in development, market and public sector reform, public administration, politics & law. Based on a wide variety of case studies on three continents and a variety of conceptual sources, the authors develop a theory that clarifies the nature and functioning of dependencies that mark governance evolutions. This in turn delineates in an entirely new manner the spaces open for policy experiment. As such, it offers a new mapping of the middle ground between libertarianism and social engineering. Theoretically, the approach draws on a wide array of sources: institutional & development economics, systems theories, post-structuralism, actor- network theories, planning theory and legal studies.

Model-Based Reasoning in Science and Technology Ángel Nepomuceno-Fernández,Lorenzo Magnani,Francisco J. Salguero-Lamillar,Cristina Barés-Gómez,Matthieu Fontaine,2019-10-24 This book discusses how scientific and other types of cognition make use of models, abduction, and explanatory reasoning in order to produce important and innovative changes in theories and concepts. Gathering revised contributions presented at the international conference on Model-Based Reasoning (MBR18), held on October 24–26 2018 in Seville, Spain, the book is divided into three main parts. The first focuses on models, reasoning, and representation. It highlights key theoretical concepts from an applied perspective, and addresses issues concerning information visualization, experimental methods, and design. The second part goes a step further, examining abduction, problem solving, and reasoning. The respective papers assess different types of reasoning, and discuss various concepts of inference and creativity and their relationship with experimental data. In turn, the third part reports on a number of epistemological and technological issues. By analyzing possible contradictions in modern research and describing representative case studies, this part is intended to foster new discussions and stimulate new ideas. All in all, the book provides researchers and graduate students in the fields of applied philosophy, epistemology, cognitive science, and artificial intelligence alike with an authoritative snapshot of the latest theories and applications of model-based reasoning.
