📖 **Networked Services and Applications - Engineering, Control and Management** Finn Arve Aagesen, Svein J. Knapskog, 2010-06-17 The EUNICE (European Network of Universities and Companies in Information and Communication technology) (<http://www.eunice-forum.org>) mission is to jointly - velop and promote the best and most compatible standard of European higher edu- tion and professionals in ICT by increasing scientific and technical knowledge in the field of ICT and developing their applications in the economy. The EUNICE Wo- shop is an annual event. This year the workshop was sponsored by IFIP TC 6 WG 6.6: Management of Networks and Distributed Systems. Eight years ago, the seventh edition of the EUNICE workshop took place in Tro- heim with the topic “Adaptable Networks and Teleservices.” Since then “adaptability” has become a topic which is found in most ICT conferences. The concept teleservices, which is a telecommunication domain concept from the 1980s, has been lifted out of the telecom community and is now found with new and sometimes mysterious names such as service-oriented architecture and cloud computing.

📖 **Future Net** Jim Ensor, 2003 The book highlights startling new ideas and developments in technology and software, then predicts the future of the Internet and technology usage in general. Evolution and personalization describe changes to: Human evolution - a rethinking of the role of technology in human evolution, outlining the role of the Internet in changing communities Personal evolution - multiple identities on the web, cyborgs, biotechnology, cloning Infrastructure - the rise of the web, and future trends including .NET, peer-to-peer, portals Interfaces - the rise of Windows, browsers and the story of 3D Internet software - the rise of games, chat, web services, bots, and music downloads, and some more General types of evolution as relating to the Net Bot evolution - the rise of bots, their role on the Internet, and the Internet as a life form Virtual evolution - a stunning new theory about virtual existence and how we will end up as part of the web A wide ranging series of ground breaking new ideas are raised in the book as part of a new perspective about the world, including the following: Personalization is at the heart of recent developments of Internet architecture and interfaces, a virtually unnoticed phenomenon as far as its range and over-arching influence. The unmet need for ‘interactivity’ is determining software success on the web. ‘Bots’ or software agents are emerging as a major new piece in the jigsaw of new software and architecture. Companion bots will emerge as our typical interface to computers - which extend into becoming ‘virtual existence.’ A restructure of the Net is proposed, via use of bots. New ‘orange links’ could link data in a new ways. Our ‘identity’ is changing as we develop multiple persona on the web - becoming personalized Our ‘bodies’ are changing by the combined impact of bionics, biotechnology, drugs, spare parts and are also being personalized. Ideas can be alive as memes, but can the Internet become conscious too? Darwin’s theory of evolution - has the way it operates on human beings changed? Technolution - technology’s effect on evolution is the driving engine of change in our society today, rather than other theories of social change It all comes together in a completely new perspective on technology, the Internet, and the future.

📖 **Evidence-Based Cybersecurity** Pierre-Luc Pomerleau, David Maimon, 2022-06-23 The prevalence of cyber-dependent crimes and illegal activities that can only be performed using a computer, computer networks, or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide. As a result, cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals’ and organizations’ risk of experiencing cyber-dependent crimes. However, although cybersecurity research and tools production efforts have increased substantially, very little attention has been devoted to identifying potential comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist. Moreover, it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing. Consequently, governmental organizations, public, and private companies allocate a considerable portion of their operations budgets to protecting their computer and Internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face. Unfortunately, this practice may complicate organizational workflows and increase costs for government entities, businesses, and consumers. The success of the evidence-based approach in improving performance in a wide range of professions (for example, medicine, policing, and education) leads us to believe that an evidence-based cybersecurity approach is critical for improving cybersecurity efforts. This book seeks to explain the foundation of the evidence-based cybersecurity approach, review its relevance in the context of existing security tools and policies, and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers’ decision-making process. The evidence-based cybersecurity approach explained aims to support security professionals’, policymakers’, and individual computer users’ decision-making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets. This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision-makers’ political, financial, social, and personal experience backgrounds when adopting cybersecurity tools and policies. This approach is also a model in which policy decisions are made based on scientific research findings.

📖 KUWAIT INTERNATIONAL MONETARY FUND, 2005-07-14 Kuwait's 2005 Article IV Consultation reports that the economic and financial positions are projected to remain strong mainly on the expectation that world oil prices will decline only gradually. Reflecting sharply higher oil prices and production, economic conditions improved significantly in 2003 and 2004. The main economic challenge facing Kuwait is to create sufficient employment opportunities for the rapidly growing national labor force by accelerating the growth of the private non-oil economy.
