  End-to-end Integration with IBM Sterling B2B Integration and Managed File Transfer solutions James Ballentine,Claudemir Braghirolli,Vasfi Gucer,Rahul Gupta,James B Herry,Richard Kinard,Gianluca Meloni,Bala Sivasubramanian,Eduardo Ribeiro de Souza,Frank Strecker,Gang Yin,IBM Redbooks,2012-07-21 Across numerous vertical industries, enterprises are challenged to improve processing efficiency as transactions flow from their business communities to their internal systems and vice versa, simplify management and expansion of the external communities, accommodate customer and supplier preferences, govern the flow of information, enforce policy and standards, and protect sensitive information. Throughout this process, external partners must be on-boarded and off-boarded, information must flow across multiple communications infrastructures, and data must be mapped and

transformed for consumption across multiple applications. Some transactions require synchronous or real-time processing while others are of a more periodic nature. For some classes of customer or supplier, the enterprise might prefer a locally-managed, on-premise solution. For some types of communities (often small businesses), an as-a-Service solution might be the best option. Many large enterprises combine the on-premise and as-a-Service approach to serve different categories of business partners (customers or suppliers). This IBM® Redbooks® publication focuses on solutions for end-to-end integration in complex value chains and presents several end-to-end common integration scenarios with IBM Sterling and IBM WebSphere® portfolios. We believe that this publication will be a reference for IT Specialists and IT Architects implementing an integration solution architecture involving IBM Sterling and IBM WebSphere portfolios.

  Peeking at Peak Oil Kjell Aleklett,2012-05-19 The term "Peak Oil" was born
in January 2001 when Colin Campbell formed the Association for the Study of
Peak Oil & Gas (ASPO). Now, Peak Oil is used thousands of times a day by
journalists, politicians, industry leaders, economists, scientists and
countless others around the globe. Peak Oil is not the end of oil but it
tells us the end is in sight. Anyone interested in food production, economic
growth, climate change or global security needs to understand this new
reality. In Peeking at Peak Oil Professor Kjell Aleklett, President of ASPO
International and head of the world's leading research group on Peak Oil,
describes the decade-long journey of Peak Oil from extremist fringe theory to
today's accepted fact: Global oil production is entering terminal decline. He
explains everything you need to know about Peak Oil and its world-changing
consequences from an insider's perspective. In simple steps, Kjell tells us
how oil is formed, discovered and produced. He uses science to reveal the
errors and deceit of national and international oil authorities, companies
and governments too terrified to admit the truth. He describes his personal
involvement in the intrigues of the past decade. What happens when a handful
of giant oil fields containing two thirds of our planet's oil become
depleted? Will major oil consumers such as the EU and US face rationing
within a decade? Will oil producing nations conserve their own oil when they
realize that no one can export oil to them in the future? Does Peak Oil mean

Peak Economic Growth? If you want to know the real story about energy today and what the future has in store, then you need to be "Peeking at Peak Oil".

  The Central Intelligence Agency and Overhead Reconnaissance Gregory

Pedlow,Donald Welzenbach,2016-03-15 The CIA's 2013 release of its book The Central Intelligence Agency and Overhead Reconnaissance 1954—1974 is a fascinating and important historical document. It contains a significant amount of newly declassified material with respect to the U-2 and Oxcart programs, including names of pilots; codenames and cryptonyms; locations, funding, and cover arrangements; electronic countermeasures equipment; cooperation with foreign governments; and overflights of the Soviet Union, Cuba, China, and other countries. Originally published with a Secret/No Foreign Dissemination classification, this detailed study describes not only the program's technological and bureaucratic aspects, but also its political and international context, including the difficult choices faced by President Eisenhower in authorizing overflights of the Soviet Union and the controversy surrounding the shoot down there of U-2 pilot Francis Gary Powers in 1960. The authors discuss the origins of the U-2, its top-secret testing, its specially designed high-altitude cameras and complex life-support systems, and even the possible use of poison capsules by its pilots, if captured. They call attention to the crucial importance of the U-2 in the gathering of strategic and tactical intelligence, as well as the controversies that the program unleashed. Finally, they discuss the CIA's development of a successor to the U-2, the Oxcart, which became the world's most technologically advanced aircraft. For the first time, the more complete 2013 release of this historical text is available in a professionally typeset format, supplemented

with higher quality photographs that will bring alive these incredible aircraft and the story of their development and use by the CIA. This edition also includes a new preface by author Gregory W. Pedlow and a foreword by Chris Pocock. Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil War, the American Revolution, gladiators, Vikings, ancient Rome, medieval times, the old West, and much more.
