The Architecture of Continuity Lars Spuybroek,2008 That buildings are made of elements doesn't mean that architecture should be based on elementarism; on the contrary, we should strive for an architecture of continuity that fuses tectonics with textile, abstraction with empathy, and matter with expressivity. This is the crux of the argument Lars Spuybroek makes in this book, the first fully theoretical account of his innovative work. The state of contemporary architecture is the product of a 150-year battle between the Polytechnique and Beaux-Arts schools of design, which has forced us into a stalemate between the radically opposed positions of high-tech and sculpturism. Spuybroek aims to do no less than mend this rift through rethinking technology as an extension of our feeling senses, materiality as the realm of activity and agency, and structure as the result of genesis. Building on Gottfried Semper's materialist theory of architecture, he takes us from a philosophy of technology to a surprisingly historical argumentation that constantly revives the words of John Ruskin, William Hogarth and Wilhelm Worringer. Alongside a number of essays, the book contains extensive conversations in which we witness him refining and sharpening his arguments (We will see a merging of Art Nouveau and Bauhaus, where empathy has been liberated from manual labor and machines have been liberated from uniform repetition). In a period of theoretical tranquility in architecture, this book takes a refreshing turn back to the basics, one in which tools, methodology and architectural aesthetics are recalibrated.

Straight Talk about Mental Tests Arthur Robert Jensen,1981 This book is for those of the general public who want to learn more about mental testing and its controversies. Sapp Attack Warren Sapp,David Fisher,2012-08-21 In his no-holds-barred memoir, Sapp Attack!, Warren Sapp, one of the NFL's most hilarious and candid personalities, reveals a side of football most fans have never before seen. Big Man. Big Talent. Big Star. Big Mouth. Big Heart. Big Personality. Big Smile. Big Headlines. Warren Sapp, one of pro football's most dominating defensive players both on and off the field, has a reputation for being bold, brash, knowledgeable, and outspoken. During his All-American career at the University of Miami, 13 seasons as an NFL star, four years on the NFL Network and one very big season on Dancing with the Stars, Sapp has never held back. Now he brings that same fearless attitude to his memoir, a book that will create controversy and headlines; in other words, pure Warren Sapp. Sapp has won every award possible for a defensive player, but it wasn't just his extraordinarily athletic ability that made him a star; it was also his ability to understand the subtleties of the game. He writes about working his way up from the high school gridiron to one of the top college football programs in the country, to the NFL, and reveals how the system actually works—the behind-the-scenes plays that fans rarely get to see. He'll discuss what it was like to face some of the greatest players in NFL history, including Hall of Famers Steve Young and Jerry Rice, both of whom he put out of the game, and Bret Favre, whom he sacked eleven times during his career. In this revealing, hilarious, and must-read book, Sapp offers readers a look inside the life of one of football's biggest stars and shares his often controversial opinions about the state of pro football today and its future.

If It's Purple, Someone's Gonna Die: The Power of Color in Visual Storytelling Patti Bellantoni,2012-10-02 If it's Purple, Someone's Gonna Die is a must-read book for all film students, film professionals, and others interested in filmmaking. This enlightening book guides filmmakers toward making the right color selections for their films, and helps movie buffs understand why they feel the way they do while watching movies that incorporate certain colors. Guided by her twenty-five years of research on the effects of color on behavior, Bellantoni has grouped more than 60 films under the spheres of influence of six major colors, each of which triggers very specific emotional states. For example, the author explains that films with a dominant red influence have themes and characters that are powerful, lusty, defiant, anxious, angry, or romantic and discusses specific films as examples. She explores each film, describing how, why, and where a color influences emotions, both in the characters on screen and in the audience. Each color section begins with an illustrated Home Page that includes examples, anecdotes, and tips for using or avoiding that particular color. Conversations with the author's colleagues-- including award-winning production designers Henry Bumstead (*Unforgiven*) and Wynn Thomas (*Malcolm X*) and renowned cinematographers Roger Deakins (*The Shawshank Redemption*) and Edward Lachman (*Far From Heaven*)--reveal how color is often used to communicate what is not said. Bellantoni uses her research and experience to demonstrate how powerful color can be and to increase readers awareness of the colors around us and how they make us feel, act, and react. *Learn how your choice of color can influence an audience's moods, attitudes, reactions, and interpretations of your movie's plot *See your favorite films in a new light as the author points out important uses of color, both instinctive and intentional *Learn how to make good color choices, in your film and in your world.

The Mathematics of Life Ian Stewart,2011-06-07 Biologists have long dismissed mathematics as being unable to meaningfully contribute to our understanding of living beings. Within the past ten years, however, mathematicians have proven that they hold the key to unlocking the mysteries of our world -- and ourselves. In *The Mathematics of Life*, Ian Stewart provides a fascinating overview of the vital but little-recognized role mathematics has played in pulling back the curtain on the hidden complexities of the natural world -- and how its contribution will be even more vital in the years ahead. In his characteristically clear and entertaining fashion, Stewart explains how mathematicians and biologists have come to work together on some of the most difficult scientific problems that the human race has ever tackled, including the nature and origin of life itself.
