BSP Extensions are also discussed extensively - you learn everything about events, using BSP Element Expressions (BEEs), creating custom BSP Extension Elements, and more

Parallel Scientific Computation Rob H. Bisseling, 2020-09-30

Building upon the wide-ranging success of the first edition, Parallel Scientific Computation presents a single unified approach to using a range of parallel computers, from a small desktop computer to a massively parallel computer. The author explains how to use the bulk synchronous parallel (BSP) model to design and implement

parallel algorithms in the areas of scientific computing and big data, and provides a full treatment of core problems in these areas, starting from a high-level problem description, via a sequential solution algorithm to a parallel solution algorithm and an actual parallel program written in BSPLib. Every chapter of the book contains a theoretical section and a practical section presenting a parallel program and numerical experiments on a modern parallel computer to put the theoretical predictions and cost analysis to the test. Every chapter also presents extensive bibliographical notes with additional discussions and pointers to relevant literature, and numerous exercises which are suitable as graduate student projects. The second edition provides new material relevant for big-data science such as sorting and graph algorithms, and it provides a BSP approach towards new hardware developments such as hierarchical architectures with both shared and distributed memory. A single, simple hybrid BSP system suffices to handle both types of parallelism efficiently, and there is no need to master two systems, as often happens in alternative approaches. Furthermore, the second edition brings all algorithms used up to date, and it includes new material on high-performance linear system solving by LU decomposition, and improved data partitioning for sparse

matrix computations. The book is accompanied by a software package BSPedupack, freely available online from the author's homepage, which contains all programs of the book and a set of test driver programs. This package written in C can be run using modern BSPlib implementations such as MulticoreBSP for C or BSPonMPI.

Parallel Scientific Computation Rob H. Bisseling, 2004-03-04

This is the first text explaining how to use the bulk synchronous parallel (BSP) model and the freely available BSPlib communication library in parallel algorithm design and parallel programming. Aimed at graduate students and researchers in mathematics, physics and computer science, the main topics treated in the book are core topics in the area of scientific computation and many additional topics are treated in numerous exercises. An appendix on the message-passing interface (MPI) discusses how to program using the MPI communication library. MPI equivalents of all the programs are also presented. The main topics treated in the book are core in the area of scientific computation: solving dense linear systems by Gaussian elimination, computing fast Fourier transforms, and solving sparse linear systems by iterative methods. Each topic is treated in depth,

starting from the problem formulation and a sequential algorithm, through a parallel algorithm and its analysis, to a complete parallel program written in C and BSPlib, and experimental results obtained using this program on a parallel computer. Additional topics treated in the exercises include: data compression, random number generation, cryptography, eigensystem solving, 3D and Strassen matrix multiplication, wavelets and image compression, fast cosine transform, decimals of pi, simulated annealing, and molecular dynamics. The book contains five small but complete example programs written in BSPlib which illustrate the methods taught. The appendix on MPI discusses how to program in a structured, bulk synchronous parallel style using the MPI communication library. It presents MPI equivalents of all the programs in the book. The complete programs of the book and their driver programs are freely available online in the packages BSPedupack and MPledupack.

Spallation Nuclear Reactions and their Applications B.S.P. Shen, M. Merker, 2012-12-06 Nine years ago, in 1967, a conference on spallation nuclear reactions and their applications in astrophysics was held at the University of Pennsylvania. I Since

that time, a number of developments have given renewed impetus to the study of spallation reactions. Among these are the successful acceleration of high energy heavy ions in the laboratory and their potential use in cancer radiotherapy, the availability of returned lunar rocks containing records of past cosmic-ray irradiation, and the development of the theory that the spallation of interstellar matter is responsible for much of the observed universal abundances of the rare light nuclides. In May 1975, a new conference on spallation nuclear reactions and their applications to astrophysics and radiotherapy was organized and held, again at the University of Pennsylvania. The papers in this volume are primarily expanded and updated versions of invited papers given at that conference. To the authors of the papers, we owe a debt of gratitude for their contributions and for their forbearance. The conference itself was much stimulated by the services of the four session chairmen: William A. Fowler, Serge A. Korff, Robert Serber, and Maurice M. Shapiro, each of whom has over the years made fundamental contributions to the subject matter of this volume. Crucial support for much of the editorial work was provided by the National Aeronautics and Space Administration and the National Science Foundation. George W.

BSP Extensions: how to Master Web Reporting with HTMLB

Frédéric Heinemann, 2005 Optimize the use of the BSP extensions HTMLB, XHTMLB, and PHTMLB, using the expert guidance found in this unique technical guide - the first in the SAP PRESS Essentials series. First, benefit from detailed advice on the practical implementation of each of the various elements. Then, after designing a BSP application with its pages and page fragments, learn how to develop the numerous functions such as hierarchical navigation, table selection, detail display, comprehensive search templates, easy-to-use input administration and much more. In addition to the standard elements from the BSP extension HTMLB such as `gridLayout`, `tree` and `tableView`, you'll also get a firsthand look at the new BSP extensions XHTMLB and PHTMLB, including their complex elements such as `formLayout`, `tabStrip` and `overflowContainer`, just to name a few. Many of these extension elements have been insufficiently documented, or simply undocumented, therefore, a comprehensive list of all tags used is included, along with their specific attributes, in the appendix. Highlights include: - `gridLayout`: Positioning text and layout components - `tree`: Hierarchical tree structures - `checkbox` and `radioButton`: Selection elements - `textEdit`: Multi-line input fields -

overflowContainer: Resolving overflow situations - formLayout:

Generic positioning elements - tableView: Presenting tables - Event Handling

Behavioral Science and Policy Bsp Craig R. Fox,Sim B.

Sitkin,2015 The success of nearly all public- and private- sector policies hinges on the behavior of individuals, groups, and organizations. Today, such behaviors are better understood than ever, thanks to a growing body of practical behavioral science research. However, policymakers often are unaware of behavioral

science findings that may help them craft and execute more effective and efficient policies. The pages of this new journal will become a meeting ground: a place where scientists and non-scientists can encounter clearly described behavioral research that can be put into action. By design, the scope of BSP is broad, with topics spanning health care, financial decisionmaking, energy and the environment, education and culture, justice and ethics, and work place practices. Contributions will be made by researchers with expertise in psychology, sociology, law, behavioral economics, organization science, decision science, and marketing. The first issue includes articles that challenge assumptions that many people have about behavioral policy interventions. This includes the assumption that intuitions are a valid indication of policy effectiveness, the assumption that large effects require large interventions, the assumption that pre-selecting defaults is more coercive than forcing citizens to make a choice, and the assumption that the effectiveness of behavioral nudges requires that people not be informed about them. The journal is a key offering of the Behavioral Science & Policy Association in partnership with the Brookings Institution. The mission of BSPA is to foster dialog between social scientists, policymakers, and other

practitioners in order to promote the application of rigorous empirical behavioral science in ways that serve the public interest. BSPA does not advance a particular agenda or political perspective. The first issue's contents follow.
