Zombillenium, Vol. 4 Arthur de Pins, 2019-07-15

Zombillenium Park has never been better. Its popularity reaches new heights following demonic reforms by Behemoth, who then decides to play his property in a very special competition: a witches' Sabbath! Gretchen, Aurelian, and Von Bloodt, meanwhile, have set up an underground escape network in order to offer the damned the chance for reconversion, far from the nine circles of Hell, a dangerous secret operation not appreciated by the park's board of directors. Determined to clean this out, they hire the services of a formidable enchantress who will turn into an arch rival of Gretchen. Underground as in the air, the fight promises to be epic! The resistance is organized in this fourth volume of Zombillenium, the monstrous bestselling and award-winning series by Arthur de Pins, eagerly awaited by fans after a long hiatus! What are Gretchen's true intentions? Will the undead succeed in asserting their rights? Who will be the future happy owner of the Zombillenium Park?

Liquids Under Negative Pressure A.R. Imre, H.J.

Maris, P.R. Williams, 2012-12-06 It is possible to stretch a liquid and, when suitably prepared, liquids are capable of sustaining substantial levels of tension, often for significant periods of time. These negative pressure states are metastable but can last for days - long enough for substantial experimental investigation. This volume is a review of recent and current research into the behaviour of liquids under negative pressure. Part I deals with the thermodynamics of stretched liquids. Part II discusses the physical and chemical behaviour of liquids under negative pressure. Part III contains papers on the effect of negative pressure on the solidification of a liquid. Part IV is devoted to stretched helium and Part V discusses cavitation in

various stretched liquids. Part VI deals with the effect of foreign substances on cavitation.

Banking Crises Garrett Jones,2016-01-26 Why do banks collapse? Are financial systems more fragile in recent decades? Can policies to fix the banking system do more harm than good? What's the history of banking crises? With dozens of brief, non-technical articles by economists and

other researchers, *Banking Crises* offers answers from diverse scholarly viewpoints.

Laser Printing of Functional Materials Alberto Piqué, Pere Serra, 2018-01-04 The first book on this hot topic includes such major research areas as printed electronics, sensors, biomaterials and 3D cell printing. Well-structured and with a strong focus on applications, the text is divided in three sections with the first describing the fundamentals of laser transfer. The second provides an overview of the wide variety of materials that can be used for laser transfer processing, while the final section comprehensively discusses a number of practical uses, including printing of electronic materials, printing of 3D structures as well as large-area, high-throughput applications. The book is rounded off by a look at the future for laser printed materials. Invaluable reading for a broad audience ranging from material developers to mechanical engineers, from academic researchers to industrial developers and for those interested in the development of micro-scale additive manufacturing techniques.

Fundamentals of Cavitation Jean-Pierre Franc, Jean-Marie Michel, 2006-01-22 This book treats cavitation, which is a unique phenomenon in the field of hydrodynamics, although it can occur in any hydraulic machinery such as pumps, propellers, artificial hearts, and so forth. Cavitation is generated not only in water, but also in any kind of fluid, such as liquid hydrogen. The generation of cavitation can cause severe damage in hydraulic machinery. Therefore,

the prevention of cavitation is an important concern for designers of hydraulic machinery. On the contrary, there is great potential to utilize cavitation in various important applications, such as environmental protection. There have been several books published on cavitation, including one by the same authors. This book differs from those previous ones, in that it is both more physical and more theoretical. Any theoretical explanation of the cavitation phenomenon is rather difficult, but the authors have succeeded in explaining it very well, and a reader can follow the equations easily. It is an advantage in reading this book to have some understanding of the physics of cavitation. Therefore, this book is not an introductory text, but a book for more advanced study. However, this does not mean that this book is too difficult for a beginner, because it explains the cavitation phenomenon using many figures. Therefore, even a beginner on cavitation can read and can understand what cavitation is. If the student studies through this book (with patience), he or she can become an expert on the physics of cavitation.

The Micro-World Observed by Ultra High-Speed Cameras Kinko Tsuji, 2017-08-30 This volume is about ultra high-speed cameras, which enable us to see what we normally do not see. These are objects that are moving very fast, or that we just ignore. Ultra high-speed cameras invite us to a wonderland of microseconds. There Alice (the reader) meets a ultra high-speed rabbit (this volume) and

travels together through this wonderland from the year 1887 to 2017. They go to the horse riding ground and see how a horse gallops. The rabbit takes her to a showroom where various cameras and illumination devices are presented. Then, he sends Alice into semiconductor labyrinths, wind tunnels, mechanical processing factories, and dangerous explosive fields. Sometimes Alice is large, and at other times she is very small. She sits even inside a car engine. She falls down together with a droplet. She enters a microbubble, is thrown out with a jet stream, and finds herself in a human body. Waking up from her dream, she sees children playing a game: "I see what you do not see, and this is....". Alice thinks: "The ultra high-speed rabbit showed me many things which I had never seen. Now I will go again to this wonderland, and try to find something new.

Higher Power Casey Bukro, 2023-06-27 An in-depth, timely examination of one town's nuclear power plant, the scandal that plagued it, and the reporter who was allowed inside. Nuclear power once promised to be the solution to the world's energy crisis, but that all changed in the late twentieth century after multiple high-profile accidents and meltdowns. Power plant workers, finding themselves the subject of public opposition, became leery of reporters. But one plant in Zion, Illinois, just forty miles north of Chicago, allowed unrestricted access to one journalist: the Chicago Tribune's Casey Bukro, one of the first environmental reporters in the country. Bukro spent two years inside the Zion nuclear plant, interviewing employees, witnessing high-risk maintenance procedures, and watching the radiation exposure counter on his own dosimeter tick up and up. In *Higher Power*, Bukro's reporting from the plant is prefaced by a compelling history of the city of Zion, including a tell-all of John Alexander Dowie, a nineteenth-

century “faith healer” who founded Zion, and whose evangelism left a mark on the city well into the modern era, even as a new “higher” power—nuclear energy—moved into town. With the acceleration of climate change, the questions and challenges surrounding nuclear power have never been more relevant. How did the promise of nuclear energy fizzle out? Should we try to address the mistakes made in the past? What part could nuclear power play in our energy future? Higher Power explores these questions and examines one American town’s attempts to build a better society as a bellwether for national policy and decision making.

IUTAM Symposium on Waves in Liquid/Gas and Liquid/Vapour Two-Phase Systems Shigeki Morioka, Leen van Wijngaarden, 2012-12-06 A IUTAM symposium on 'Waves in Liquid/Gas and Liquid/Vapor Two-Phase Systems' was held in Kyoto, Japan, 9-13 May 1994. Sixty-three scientists participated coming from ten countries, and forty-two lectures were presented. The list of participants and the program are included in this volume. The symposium was held in response to the request of the participants in the IUTAM symposium 'Adiabatic Waves in Liquid-Vapor System' held at Gottingen in 1989. At that time, the need for another symposium in about five years had been indicated by all the participants. This symposium intends to develop the subject of wave properties in more general liquid-gas two-phase systems. Topics in this symposium may be classified as (1) waves in liquid-gas bubble systems including interfacial effects, (2) waves in gas(vapor)-droplets systems, (3) waves in films or stratified systems, (4) waves with liquid-vapor transition, (5) waves with vapor-liquid transition, (6) wave propagation near the critical point and (7) waves with

low pressure effect. As for topic (1), experiments, numerical simulations and analytical approaches to waves in bubbly liquids were discussed. The importance of interbubble interactions through the liquid-field is now well established at least in terms of potential theory. There was also a progress concerning the well-posedness of governing equations for void waves. For pressure waves there were some new phenomena, such as bubble cluster formation and the occurrence of three-dimensional structures, in addition to a progress from more qualitative studies to quantitative ones.

Social Banking and Social Finance Roland

Benedikter, 2011-01-13 For over 2,000 years, banks have served to facilitate the exchange of money and to provide a variety of economic and financial services. During the most recent financial collapse and subsequent recession, beginning in 2008, banks have been vilified as perpetrators of the crisis, the public distrust compounded by massive public bailouts. Nevertheless, another form of banking has also emerged, with a focus on promoting economic sustainability, investing in community, providing opportunity for the disadvantaged, and supporting social, environmental, and ethical agendas. Social Banking and Social Finance traces the emergence of the “bank with a conscience” and proposes a new approach to banking in the wake of the economic crisis. Featuring innovations and initiatives in banking from Europe, Canada, and the United States, Roland Benedikter presents an alternative to traditional banking practices that are focused exclusively on profit maximization. He argues that social banking is not about changing the system, but about improving some of its core features by putting into use the triple bottom line principle of profit-people-planet. Important lessons can be learned by the success of social banks that may be useful

for the greater task of improving the global financial system and avoiding economic crises in the future.

Portfolios and Investments Michael

Frömmel, 2013-09-27 The book is concerned with the theory of portfolios, as well as with investing in assets and securities and offers a general introduction, rather than a toolbox for making money. It will help its readers to better understand investing. The book is structured in two parts. Part I introduces the student into fundamental principles of portfolio theory and investment analysis, such as the Markowitz portfolio selection approach, factor models, basic evaluation techniques and portfolio management. Part II extends the material to more advanced topics and focuses on inefficient markets, including topics including technical analysis and momentum effects, behavioural finance, bubbles and herding, portfolio management in inefficient markets and market microstructure. followed by an appendix consisting of primers to some econometric approaches.
