On the Investigation of Instrumental Errors of Universal and Transit Instruments by Means of Autocollimation Reiner Schwebel,1970 Geodetic astronomy depends to a certain degree on the precision of available instruments. This investigation covers the instrument errors that effect the determination of a horizontal direction and the effect of these errors on position accuracy determination by horizontal angle measurements and vertical transits. The following errors were investigated: (1) axis errors; that is, horizontal, tilt and target axis (2) instrument errors; that is, divided circle, micrometer, and level bubble and heat deflection of the telescope. These errors seldom exceed + 1 minute. Three common first order instruments, the Wild T-4, Kern DKM-3, and the Askania AP70 were investigated. The direct investigation of the instrumental errors was conducted utilizing very precise auto-collimation methods, and statistical methods for defining the type and magnitude of the errors.

Twenty-Second Symposium on Naval Hydrodynamics National Research Council,Naval Surface Warfare Center, Carderock Division,Office of Naval Research,Division on Engineering and Physical Sciences,Commission on Physical Sciences, Mathematics, and Applications,Naval Studies Board,2000-02-02 The Twenty-Second Symposium on Naval Hydrodynamics was held in Washington, D.C., from August 9-14, 1998. It coincided with the 100th anniversary of the David Taylor Model Basin. This international symposium was organized jointly by the Office of Naval Research (Mechanics and Energy Conversion S&T Division), the National Research Council (Naval Studies Board), and the Naval Surface Warfare Center, Carderock Division (David Taylor Model Basin). This biennial symposium promotes the technical exchange of naval research developments of common interest to all the countries of the world. The forum encourages both formal and informal discussion of the presented papers, and the occasion provides an opportunity for direct communication between international peers.

Instruments of Science Robert Bud,Deborah Jean Warner,1998 With over 300 entries from the ancient abacus to X-ray diffraction, as represented by a ca. 1900 photo of an X- ray machine as well as the latest research into filmless x- ray systems, this tour of the history of scientific instruments in multiple disciplines provides context and a bibliography for each entry. Newer conceptions of instrument include organisms widely used in research: e.g. the mouse, drosophila, and E. coli. Bandw photographs and diagrams showcase more traditional instruments from The Science Museum, London, and the Smithsonian's National Museum of American History. Econometric Modelling of World Shipping M. Beenstock, A. Vergottis, 1993-09-30 Econometric Modelling of World Shipping describes an economic model that may be used to forecast world shipping markets. A unique feature of the model is that it relates to both sectors of world shipping, the dry cargo sector and the tanker sector. This is the first time that a model of this type has been published. This book also breaks new ground in explaining the behaviour of vessel prices, both new and secondhand.

Practical Archaeology Brian D. Dillon, 1993-12-31 Useful and instructive papers advocating the value of practical considerations in the field, addressing common problems from the real world of archaeology and proposing real solutions that have proven successful through trial and error. Includes papers on the chemical reduction of clay matrices, methods of establishing precise provenience in archaeological excavations, surface collecting with the aid of transits, simplified mapping techniques, the use of X rays in artifact analysis, archaeological surveying from muleback, choosing and maintaining an archaeological field vehicle, and the use of small boats in archaeological investigations.

Navigation Instruments Vasilii Petrovich Selezhnev, 1963 Some of the principles of aerial navigation, including problems in space navigation are presented. It contains an exposition of the theoretical principles and a description of the material means for aerial navigation and astronomic orientation relative to the earth and in interplanetary space. Particular attention is paid to unified course systems, to height velocity central units, to Doppler velocity measuring instruments, different navigational automatic devices for path calculation and to astronomic orientation devices. The theoretical principles and the constructions of gyroscopic inertial, stellar-inertial, and complex navigation systems are given. (Author).

Round-Robin Test on Creep Behaviour in Cracked Sections of FRC: Experimental Program, Results and Database Analysis Aitor Llano-Torre, Pedro Serna, 2021-06-20 The book presents the work of the RILEM Technical Committee 261-CCF, which organized the challenging International Round Robin Test (RRT) on the creep behaviour of Fibre Reinforce Concrete (FRC) cracked specimens. Although different creep test methodologies have been developed in recent years, the absence of a standardised creep methodology hindered general comparisons. Therefore, the RILEM TC 261-CCF launched an ambitious international RRT program to improve the knowledge on long-term behaviour of cracked sections of FRC and assess all the different testing methodologies, assuming the big variability of testing criteria among the scientific community. The participation of 19 laboratories across 20 institutions in 14 countries all over the world enabled the realisation of the largest experimental campaign on creep in the cracked state. As a result of the RRT, an extensive database of creep test results was created containing comprehensive information from 124 cracked FRC specimens tested using different creep testing procedures in agreed conditions. The book will benefit academics and practitioners interested in the long-term behaviour of FRC since it served as basis for the recently published RILEM Recommendation on creep testing procedure and represents the current knowledge on creep in cracked FRC specimens.

Gas-bubble Disease of Salmonids Robert R. Rucker, 1972 Fish maintained in water supersaturated with air reach equilibrium with gases dissolved in water. These gases in the fish tend to equilibrate to the atmosphere the same as the gases in the water. Gas-bubble disease is characterized by bubbles under the skin, in the fins, tail, mouth, behind the eyeballs, and in the vascular system. Carbon dioxide does not cause gas bubble disease. Oxygen can cause gas-bubble disease at about 350 percent air saturation, but nitrogen can cause the disease even below 118 percent air saturation. Excess gas in water can be produced by pressure, increase in temperature, and biotic metabolism, and can be reduced by exposure to air. Saturation tables for atmospheric oxygen and nitrogen in water for 0 degrees to 30 degrees centigrade are presented.

CRYENGINE Game Development Blueprints Richard Gerard Marcoux III,Chris Goodswen,Riham Toulan,Sam Howels,2015-08-28 Perfect the art of creating CRYENGINE games through exciting, hands-on game development projects About This Book Create CRYENGINE games from scratch with CRYENGINE Blank Game Starter-kit Discover good working practices and tips to quickly jump into making a new level in the game Build practical game projects and discover advanced concepts of CRYENGINE game development using the examples in the book Who This Book Is For This book is intended for CRYENGINE game developers, wanting to develop their skills with the help of industry experts. A good knowledge level and understanding of CRYENGINE is assumed, to allow efficient programming of core elements and applications. What You Will Learn Create a CRYENGINE game from scratch with the Game Starter-kit Add custom methods to allow the player/AI to use a weapon Create complete “start” and “end” game menus using Scaleform and C++ Discover how to use highpoly modeling workflow and techniques within the pipeline for the SDK to use Use the Crytiff exporter from Photoshop Export the CHR—the format the engine needs to read the skeleton Integrate the character in the engine using the character tool Better understand the rules to create and author skeletons to rig characters designed for CRYENGINE Debug common setup issues that might appear during production with useful tools In Detail CRYENGINE is a game engine developed by Crytek for PC, Playstation, Xbox, Android, and iOS. It can be used to create AAA games, movies, high-quality simulations, and interactive applications. It is most popularly used for game development. In this book, you will start off by exploring the CRYENGINE “Blank” Game Starter-kit, creating a completely playable character from scratch and controlling its movement. You will learn how to implement a weapon and ammo class, and will create complete “start” and “end” game menus using Scaleform and C++. Additionally, you will learn some key texturing techniques for PBR and how to create and bake maps to the lowpoly model. You will also explore how to get a static model from Maya and shaders setup in the SDK to check the textures during creation, and create all the necessary engine files to export and see the game character's animations in your engine. In the final third of the book, you will learn how to create objectives, set up saved games, layer on audio polish to help immerse the player in the experience, and debug game issues. Style and approach An easy-to-follow, practical guide covering three exciting projects. As you work through each project you will explore new topics including complex animation, advanced scripting, and complex character motion. All the code used in each project is explained in detail.
